. 6320. Crew of 6, When. Sec. 3. It shall be unlawful for any per- firm, company, or corporation, engaged in the business of common car- operating freight and passenger trains, or either of them, within or h the State of Nevada, to run or operate, or permit or cause to be operated, within or through this state, along or over its road or other than along or over its road or tracks within yard limits, any t or passenger train of more than fifty freight, passenger or other exclusive of caboose and engine and tender, with less than a full crew, ting of not less than six persons, to wit, one conductor, one engineer, reman; two brakeman and one flagman.

ARIZONA FULL CREW LAW

Secs. 649 and 651

REVISED CODE ARIZONA, 1928

Sec. 649. Train crews; failure to use full crews; penalty. A single locomotive, or a single locomotive with its accompanying tender, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, and one conductor or flagman; provided, however, that this section shall not apply to helper locomotives going or returning a distance of twenty-five (25) miles.

A passenger, mail or express train, composed of less than six cars, when operated outside of the yard limits shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fire-man, one conductor, one baggage-master, and one flagman; provided, however, that this section shall not apply to gasoline motor cars.

A passenger, mail or express train composed of six or more cars, when operated outside of the yard limits, shall be equipped with, and shall carry a crew consisting of not less than one engineer, one fireman, one conductor, one baggage-master, one flagman, and one brakeman.

A freight train composed of less than forty cars, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one flagman, and one brakeman.

A freight train composed of forty or more cars, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one flagman and two brakemen.

All local freight trains, doing any switching, or unloading any freight of whatever nature, shall be equipped with, and shall carry, a crew consisting of six persons, to wit: One conductor, one engineer, one fireman, two brakemen, and one flagman.

All trains other than those described in the preceding portions of this act, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one flagman, and one brakeman.

That all flagmen mentioned in the preceding sections shall have had at least

TRAIN CREWS

An Act to promote the public safety by requiring common-carrier railroads to provide adequate train crews, and defining such crews, and prescribing a penalty for the violation of the provisions thereof

Approved March 12, 1913, 62.

Sec. 6318. Full Train Crew Required. - Crew of 4, When. Sec. 1. It shall be unlawful for any person, firm, company or corporation engaged in the business of common carrier, operating freight and passenger trains, or either of them, within or through the State of Nevada, to run or operate, or permit or cause to be run or operated, within or through this state, along or over its road or tracks, other than along or over the road or tracks within yard limits, any freight or passenger train consisting of two cars or less, exclusive of caboose and engine and tenders, with less than a full crew consisting of not less than four persons, to wit, one engineer, one fireman, one conductor and one brakeman, who will act in the capacity of flagman.

Sec. 6319. Crew of 5, When. Sec. 2. It shall be unlawful for any person, firm, company, or corporation engaged in the business of common carrier, operating freight and passenger trains, or either of them, within or through the State of Nevada, to run or operate, or permit or cause to be run or operated, within or through this state, along or over its road or tracks, other than along or over the road or tracks within yard limits, any freight or passenger train of three or more and less than fifty freight, passenger, or other cars exclusive of caboose and engine with less than a full crew consisting of five persons, to wit, one engineer, one fireman, one conductor, one brakeman and one flagman.

Sec. 6320. Crew of 6, When. Sec. 3. It shall be unlawful for any person, firm, company, or corporation, engaged in the business of common carrier, operating freight and passenger trains, or either of them, within or through the State of Nevada, to run or operate, or permit or cause to be run or operated, within or through this state, along or over its road or tracks other than along or over its road or tracks within yard limits, any freight or passenger train of more than fifty freight, passenger or other cars, exclusive of caboose and engine and tender, with less than a full crew, consisting of not less than six persons, to wit, one conductor, one engineer, one fireman, two brakeman and one flagman.

REVISED CODE ARIZONA, 1928

Sec. 649. Train crews; failure to use full crews; penalty. A single locomotive, or a single locomotive with its accompanying tender, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman; and one conductor or flagman; provided, however, that this section shall not apply to helper locomotives going or returning a distance of twenty-five (25) miles.

A passenger, mail or express train, composed of less than six cars, when operated outside of the yard limits shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one baggage-master, and one flagman; provided, however, that this section shall not apply to gasoline motor cars.

A passenger, mail or express train composed of six or more cars; when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one baggage-master, one flagman, and one brakeman.

A freight train composed of less than forty cars, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one flagman, and one brakeman.

A freight train composed of forty or more cars, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one flagman and two brakemen.

All local freight trains, doing any switching, or unloading any freight of whatever nature, shall be equipped with, and shall carry, a crew consisting of six persons, to wit: One conductor, one engineer, one fireman, two brakemen, and one flagman.

All trains other than those described in the preceding portions of this act, when operated outside of the yard limits, shall be equipped with, and shall carry, a crew consisting of not less than one engineer, one fireman, one conductor, one flagman, and one brakeman.

That all flagmen mentioned in the preceding sections shall have had at least one year's experience as brakemen.

All engines used in switching or placing cars within the limits of any railroad yard shall be equipped with and shall carry a crew of not less than one engineer and one fireman. (Sections 1-2-3-4-5-6-7-8-9, Ch. 16, L. '12, referred measure passed at General Election 1912.)

INTERSTATE COMMERCE COMMISSION
ORDERS CONCERNING THE MATTER OF

METHOD AND FORM OF RECORDS TO BE KEPT BY CARRIERS RELATING TO THE TIME ON DUTY OF EMPLOYES AND THE MOVEMENT OF TRAINS

INTERSTATE COMMERCE COMMISSION.

ORDER.

At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D. C., on the second day of May, A. D. 1921.

IN THE MATTER OF METHOD AND FORM OF RECORDS TO BE KEPT BY CARRIERS RELATING TO THE TIME ON DUTY OF EMPLOYEES AND THE MOVEMENT OF TRAINS.

The method and form of records to be kept by carriers relating to the time on duty of employees and the movement of trains having been considered by the Commission:

It is ordered, That the forms hereto attached, entitled—

Time Return and Delay Report of Engine and Train Employees.

Daily Time Report of Employees who by the use of the telegraph or telephone dispatch, report, transmit, receive, or deliver orders pertaining to or affecting train movements.

Dispatcher's Record of Movement of Trains.

Station Record of Train Movements,

be and the same are hereby approved; that a copy of each duly authenticated by the Secretary of the Commission, be filed in its archives, and a second copy thereof, in like manner authenticated, filed in the office of the Bureau of Safety, and that each of said copies so authenticated and filed shall be deemed an original record thereof.

It is further ordered, That the said forms be, and are hereby, prescribed for the use of all common carriers engaged in interstate or foreign commerce by railroad in keeping records of time on duty of its employees in train and engine service; records of delays to trains; records of time on duty of employees who by the use of the telegraph or telephone dispatch, report, transmit, receive, or deliver orders pertaining to or affecting train movements; of Dispatcher's Record of Train Movements; and of Records of Train Movements stations, offices and places reporting train movements; that each and every such carrier, and each and every receiver or operating trustee of any such carrier, be required to make and keep records in conformity therewith, and that a copy of said form be served

with this order upon each and every such carrier and each and every receiver or operating trustee of any such carrier.

It is further ordered, That such forms and accompanying instructions are, and by virtue of this order become the lawful manner according to which such records are to be made and kept; provided, however, that each such carrier may at its option, and with the approval of the Commission, add to such records appropriate blanks for any additional information desired by it.

It is further ordered, That the Order of this Commission entitled "In the Matter of Train Delay Reports," issued on the 12th day of June, A. D. 1912, is hereby rescinded upon the taking effect of this order.

And it is further ordered, That the 1st day of July, 1922, be, and the same is hereby, fixed as the date upon which this order shall become effective,

By the Commission:

[SEAL.]

GEORGE B. MCGINTY,
Secretary.

(Over.)

INSTRUCTIONS.

1. This report shall be rendered for all engine and train crews including yard and switching crews. Enginemen, firemen, conductors, flagmen, train baggagemen and trainmen shall also use this form when reporting individually. The report shall be rendered and signed by the engineer for the engine crew and by the conductor for the train crew. If there is no engineer or conductor it shall be rendered and signed by the ranking employee whose time is reported thereon. Reports shall be numbered consecutively for each month beginning with No. 1.

2. The report shall be dated as of the date on which the employee first goes on duty.

3. Under "Remarks" shall be shown any irregularities of the hours of duty. If an employee is released from duty for any period between the time of first going on duty and the time finally relieved from duty, such fact must be shown under "Remarks," giving the place at which the release is given, the time at which it began, and the time at which it ended. Time off duty for meals taken by yard crews shall also be shown under "Remarks." If the whole or part of service is deadheading the place at which the deadheading began and ended and the train on which the employee deadheaded will be shown. When a crew or employee is relieved before the completion of a trip the name of the conductor or engineman of the crew relieving or the name of the employee relieving will be shown.

4. Wherever time is shown A. M. or P. M. shall be given.

5. In reporting delays the cause of each delay, the place at which it occurred, the time it began and the time ended shall be given. Delays due to different causes shall be shown separately.

6. All delays to passenger trains shall be shown. Delays to freight trains of less than 10 minutes at any one place need not be shown. Delays to yard and switching crews whose service is confined entirely to yard limits need not be shown.

INSTRUCTIONS.

1. Telegraph and telephone operators, signalmen, switch tenders, or other employees who by the use of the telegraph or telephone, dispatch, report, transmit, receive, or deliver orders pertaining to or affecting train movements shall fill out this form and it shall include all service performed in whatever capacity. The service of but one employee will be shown on one sheet.

2. The time of train dispatchers whose entire period of duty appears on Dispatcher's Record of Movement of Trains and members of engine and train crews who receive orders by telephone need not be reported on this form.

3. This report shall be dated as of the date on which the employee first goes on duty, and shall be numbered consecutively commencing with No. 1 at the beginning of each month.

INTERSTATE COMMERCE COMMISSION.

ORDER.

At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D. C., on the 13th day of February, A. D. 1922.

IN THE MATTER OF METHOD AND FORM OF RECORDS TO BE KEPT BY CARRIERS RELATING TO THE TIME ON DUTY OF EMPLOYEES AND THE MOVEMENT OF TRAINS.

The order of this Commission entitled "In the Matter of Method and Form of Records to be kept by Carriers relating to the Time on Duty of Employees and the Movement of Trains," issued on the 2d day of May, A. D. 1921, being under consideration:

It is ordered, That the second paragraph on page 2 of said order of May 2, A. D. 1921, be, and the same is hereby, amended to read "*It is further ordered*, That the order of this Commission entitled 'In the Matter of Train Delay Reports,' issued on the 10th day of June, A. D. 1912, is hereby rescinded upon the taking effect of this order."

And it is further ordered, That a copy of this order be served upon each and every common carrier engaged in interstate or foreign commerce by railroad and every receiver or operating trustee of any such carrier.

By the Commission:

[SEAL.] GEORGE B. MCGINTY,
Secretary.

DELAY REPORT

58 PLACE	DURATION OF DELAY 59 TIME ENDED	60 TIME ENDED	61 CLAIMED TIME	62 CAUSE OF DELAY—GIVE SEPARATELY EACH DELAY AND AMOUNT OF TIME DUE TO EACH CAUSE

DOUBLE HEADED OVER ARIZONA-NEVADA TERRITORY	63-FROM	64-TO	65-MILES	66-TRAIN OR ENGINE NUMBER	67-TRAIN OR ENGINE NUMBER—DIVISION

68-CAUSE OF DOUBLE HEADING

64 INSTRUCTIONS

1. The report shall be rendered by all engine and train employes in charge of trains, locomotives or motor cars, and by all other employes who perform service in connection with the movement of trains, locomotives or motor cars, except those who are required to report on Form 5-A. Each employe shall report for his own service.

2. The report shall be filed as of the date on which the service was performed.

3. Under "Remarks" shall be shown any irregularities of the trip, including delays, if any, to the train, engine or motor car, and the reasons therefor; the number of the train, engine or motor car on which the employe performed service, if different from that shown in the body of the report; the number of the train, engine or motor car on which the employe left the terminal, if different from that on which he returned; the number of the train, engine or motor car on which the employe left the point at which relieved, if different from that on which he arrived at such point

MADE TO DETERMINE EFFECT OF
ARIZONA TRAIN LIMIT LAW ON
FREIGHT AND PASSENGER OPERATIONS

ITEM	TITLE
1	Freight redispatch study, Yuma, Arizona to El Paso, Texas, excluding Phoenix Line, for period June and August, 1938.
2	Passenger redispatch study, Los Angeles, California to El Paso, Texas for year 1938.
3	Analysis of passenger operations, Los Angeles, California to El Paso, Texas for year 1938, showing unnecessary interference, switching delay, adverse routings, reassignment of passenger car space, splitting and consolidation of trains, cancellation of assigned car movements, excess passenger car miles and additional helper service caused by observance of Arizona 14 car limit law.
4	Freight redispatch study, Phoenix, Arizona to Tucson, Arizona, month of December, 1938.
5	Freight redispatch study, Yuma, Arizona to El Paso, Texas for period April 4th to April 30th, 1940, actual operation compared with redispatched operation, observing 70 car restriction and using present power and short sidings.
6	Freight redispatch study, Yuma, Arizona to El Paso, Texas for period April 4th to April 30th, 1940, actual operation compared with redispatched operation, with no restriction and using AC power and long sidings.

Defendant's Exhibit No. 199 (Witness Sines)
Jan. 23, 1941.

SOUTHERN PACIFIC COMPANY
(Pacific Lines)

LOS ANGELES, CALIFORNIA TO EL PASO, TEXAS,
ANALYSIS OF PASSENGER OPERATIONS FOR YEAR 1938
SHOWING UNNECESSARY INTERFERENCE, SWITCHING DELAY, ADVERSE ROUTING, REASSIGNMENT OF PASSENGER CAR SPACE, SPLITTING AND CONSOLIDATION OF TRAINS, CANCELLATION OF ASSIGNED CAR MOVEMENTS, EXCESS PASSENGER CAR MILES AND ADDITIONAL HELPER SERVICE CAUSED BY OBSERVANCE OF ARIZONA 14 CAR LIMIT LAW

YEAR 1938

		CHARACTER OF INTERFERENCE (a)	NUMBER OF INSTANCES (b)	NO. OF TRAINS INVOLVED (c)	INSTANCES WHEN DELAYED (d)	AVERAGE MINUTES EACH DELAY	NO. OF CARS SET OUT (e)	NO. OF CARS PICKED UP (f)
SECTION 1	Unnecessary interference to westward trains at El Paso, Texas, Kodom, New Mexico, and Lordsburg, New Mexico, to avoid exceeding the Arizona 14 car limit upon entering the State, or to permit trains to pick up at stations west thereof without exceeding the Arizona 14 car limit	Switch'g	13	23	2	9	29	35
SECTION 2	Unnecessary interference to westward trains at Tucson, Arizona and Phoenix, Arizona, to permit trains to pick up at Tucson and stations west thereof without exceeding the Arizona 14 car limit	Switch'g	74	162	25	14	111	123
SECTION 3a	Unnecessary interference to train No. 6 and other trains at Yuma, Arizona and stations east thereof to avoid exceeding the Arizona 14 car limit	Switch'g	24	31	9	11	31	55
SECTION 3b	Unnecessary interference to train No. 6 and other trains at stations east of Yuma, Arizona, to return cars to proper route or proper train, or to deliver cars to connecting line	Switch'g	9	9	1	9	8	3
SECTION 4a	Unnecessary interference to train No. 4 and other trains at Yuma, Arizona, and stations east thereof, to avoid exceeding the Arizona 14 car limit	Switch'g	16	18	8	12	14	13
SECTION 4b	Unnecessary interference to train No. 4 and other trains at stations east of Yuma, Arizona, to return cars to proper route or proper train, or to deliver to connecting line	Switch'g	4	4	1	3	2	2
SECTION 5a	Unnecessary interference to train No. 44 and other trains at Yuma, Arizona, and stations east thereof to avoid exceeding Arizona 14 car limit	Switch'g	15	16	1	10	16	7
SECTION 5b	Unnecessary interference to train No. 44 and other trains at stations east of Yuma, Arizona, to return cars to proper route or proper train, or to deliver to connecting line	Switch'g	6	6	1	52	0	8
SECTION 6a	Unnecessary interference to trains other than trains Nos. 6, 4 and 44 at Yuma, Arizona, and stations east thereof, to avoid exceeding the Arizona 14 car limit	Switch'g	16	19	2	5	24	13
TOTAL	SECTIONS 3a, 4a, 5a and 6a, INVOLVING EASTWARD TRAINS AT YUMA, FOR COMPARISON WITH SECTION 2 INVOLVING WESTWARD TRAINS AT TUCSON AND PHOENIX.	Switch'g	71	84	20	11	85	88
SECTION 6b	Unnecessary interference to trains other than trains Nos. 6, 4 and 44 at stations east of Yuma, Arizona to return cars to proper route or proper train, or to deliver to connecting line	Switch'g	2	4	3	10	5	5
SECTION 7a	Unnecessary interference to eastward trains at Los Angeles, California, to avoid exceeding the Arizona 14 car limit	Switch'g	7	7	0	-	0	7
SECTION 7b	Unnecessary interference to westward trains at Yuma, Arizona and stations east thereof caused by observance of the 14 car limit within the State of Arizona	Switch'g	32	61	10	26	75	67
	TOTALS		222	359	63	15	315	338

SECTION 8	Unnecessary delay to deadhead equipment at stations Yuma, Arizona to El Paso, Texas, caused by observance of Arizona 14 car limit, due to being set out and later picked up, or to failure to be picked up per schedule.	(a) Character of interference:	Delay
		(b) Number of instances:	45
		(c) Number of trains involved:	89
		(d) Number of cars involved:	51
		(e) Total delay to deadhead cars:	499 hours and 29 minutes
		(f) Average delay per car:	9 hours and 47 minutes
SECTION 9	Unnecessary interference account adversely moving cars via other than the assigned route, or assigned train, to avoid exceeding the Arizona 14 car limit.	(a) Character of interference:	Adverse routing
		(b) Number of instances:	56
		(c) Number of trains involved	112
		(d) Number of cars involved:	67
SECTION 10	Unnecessary interference account cancelling the movement of assigned cars to avoid exceeding the Arizona 14 car limit.	(a) Character of interference:	Cancellation of assigned car movements
		(b) Number of instances:	44
		(c) Number of movements cancelled:	47
		(d) Number of trains involved:	48
		(e) Instances when trains delayed:	6 instances, averaging 1 minutes each
SECTION 11	Helper engine service incurred on Los Angeles Division by reason of westward passenger trains arriving at Yuma, Arizona, with cars belonging to other trains, thereby requiring additional helper service on Los Angeles Division.	(a) Character of interference:	Helper engine service
		(b) Number of instances:	21
		(c) Number of trains involved:	21
		(d) Locomotive helper miles incurred:	1,142
SECTION 12	Unnecessary delay to occupied or loaded cars at stations Yuma, Arizona to El Paso, Texas caused by observance of Arizona 14 car limit, due to being set out and later picked up, or to failure to be picked up per schedule.	(a) Character of interference:	Delay to occupied or loaded cars
		(b) Number of trains involved:	69
		(c) Number of cars delayed:	200
		(d) Total delay to cars involved:	165 hours and 30 minutes
		(e) Average delay per car:	50 minutes
SECTION 13a	Adverse routing to avoid exceeding the 14 car limit resulting in excess car miles.	(a) Character of interference:	Excess car miles
		(b) Number of instances:	60
		(c) Number of cars involved:	62
		(d) Total excess miles incurred:	11,442
SECTION 13b	Adverse routing to avoid exceeding the 14 car limit resulting in saved car miles.	(a) Character of interference:	Car miles saved
		(b) Number of instances:	106
		(c) Number of cars involved:	142
		(d) Total car miles saved:	9,239

NOTE: NET EXCESS CAR MILES INCURRED BY OBSERVANCE OF ARIZONA 14 CAR LAW:

Section 13a, (d) 11,442 excess car miles incurred minus 9,239 car miles saved, section 13b, (d), produces net 2,203 excess car miles

SECTION 14 Unnecessary interference (not otherwise classified) caused by observance of Arizona 14 car limit: Six items involving eight trains as listed on sheet No. 33.

SECTION 1

UNNECESSARY INTERFERENCE TO WESTWARD TRAINS AT EL PASO, TEXAS ROCKO, NEW MEXICO, AND LORDSBURG, NEW MEXICO, TO AVOID EXCEEDING THE ARIZONA 14 CAR LIMIT UPON ENTERING THE STATE, OR TO PERMIT TRAINS TO PICK UP AT STATIONS WEST THEREOF WITHOUT EXCEEDING THE ARIZONA 14 CAR LIMIT

[fol. 5621] DEFENDANTS EXHIBIT No. 204 (Witness Browning) Jan. 23, 1941

Chronological History of Freight Car Interchange Rule Requirements to which Cars Must Conform to Render Them Acceptable in Interchange, from September 1, 1911 to January 1, 1941 with Respect to Following Items:

Air Brakes
Axles
Brake Beams
Brake Beam Hangers
Couplers
Draft Gears
Trucks
Underframes
Wheels

[fol. 5622] Air Brakes

Rule effective September 1, 1911 (See Code revised 1911, page 26):

Delivering Company Responsible

"Rule 53. All freight cars offered in interchange must be equipped with air brakes.

"After September 1, 1912, all freight cars offered in interchange must be equipped with M. C. B. Standard 1¼-inch train line, angle cocks and quick action triple valve.

"After September 1, 1912, all freight cars offered in interchange not equipped with pressure retaining valves."

Rule amended effective September 1, 1912, to read (See Code revised 1912, page 35):

Delivering Company Responsible

"Rule 53. All freight cars offered in interchange must be equipped with air brakes, angle cocks, quick action triple valves, M. C. B. Standard 1¼-inch train line and pressure retaining valves."

Rule amended effective October 1, 1913, to read (See Code revised 1913, page 29):

Delivering Company Responsible

"Rule 53. All freight cars offered in interchange must be equipped with air brakes having 1¼-inch air brake pipe and angle cocks; also quick action triple valve, pressure retaining valve and an efficient hand brake."

Rule 53 relocated as Section (a) of Rule 3, effective October 1, 1914 and amended to read (See Code revised 1914, page 5):

"Rule 3 (a). Cars will not be accepted in interchange unless equipped with air brakes having 1¼-inch air brake pipe and angle cocks; also quick-action triple valve, pressure retaining valve and an efficient hand brake."

Rule amended effective October 1, 1917, to read (See [fol. 5623] Code revised 1917, page 12):

"Rule 3. (a) Cars will not be accepted in interchange unless equipped with air brakes having 1¼ inch air-brake pipe and angle cocks; also quick-action triple valve, pressure-retaining valve and an efficient hand brake.

"Cars built after January 1, 1919, must be equipped with M. C. B. standard triple valves."

Rule amended effective November 1, 1919, to read (See Code revised 1919, page 11):

"Rule 3 (a) Cars will not be accepted in interchange unless equipped with air brakes having 1¼ inch air-brake pipe and angle cocks; also quick-action triple valve, pressure-retaining valve and an efficient hand brake.

"Cars built after January 1, 1919, must be equipped with A. R. A. standard triple valves."

Rule amended effective January 1, 1925, to read (See Code revised 1924, page 18):

"Rule 3. (a) Cars will not be accepted in interchange unless equipped with air brakes having 1¼ inch air-

brake pipe and angle cocks; also quick-action triple valve, pressure-retaining valve and an efficient hand brake.

"Cars built after January 1, 1919, must be equipped with A. R. A. Standard triple valves.

"Cars built new or rebuilt after March 1, 1924, shall have the hand brake arrangement with respect to braking power in accordance with the standard adopted in 1924."

Rule entirely rearranged for better reference effective January 1, 1927, to read (See Code revised 1926, pages 19 and 21):

"Rule 3. Cars not conforming to the following re- [fol. 5624] quirements will not be accepted in interchange, or from car owners, as specified:

"(a) (1). Air brakes, including quick action triple valves, pressure retaining valve, 1¼ inch air brake pipe and angle cocks, required on all cars. In interchange.

"(a) (2). A. R. A. Standard triple valves required on all cars built on or after January 1, 1919. In interchange.

"(h). Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In interchange."

Paragraph (a) (2) amended effective July 1, 1928, to read (See Supplement No. 1 to Code revised 1927, page 4):

"(a) (2). A. R. A. Standard triple valves required on all cars built new on or after January 1, 1919, and on all cars rebuilt on or after July 1, 1928. In interchange."

Rule amended effective January 1, 1929, to read (See Code revised 1928, pages 15 and 16):

"Rule 3. Cars not conforming to the following requirements will not be accepted in interchange, or from car owners, as specified:

"(a) (1). Air brakes, including quick action triple valve, pressure retaining valve, 1¼ inch air brake pipe

and angle cocks, required on all cars. In interchange.

"(a) (2). Air brakes, including centrifugal dirt collector, in addition to above details, required on all cars built new or rebuilt on and after June 1, 1928. From owners.

"(a) (3). A. R. A. Standard triple valves required on all cars built new on or after January 1, 1919, and on all cars rebuilt on or after July 1, 1928. In interchange.

"(h). Hand brake arrangement must be efficient on [fol. 5625] all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In interchange."

Effective date of requirement contained in Paragraph (a) (2) was extended from June 1, 1929, to August 1, 1929, and extension announced in Supplement No. 1 to Code revised 1928, page 3.

Rule amended effective January 1, 1933, to read (See Code revised 1932, pages 15 and 17):

"Rule 3. Cars not conforming to the following requirements will not be accepted in interchange, or from car owners, as specified:

"(a) (1) Air Brakes, including quick action triple valve, pressure retaining valve, 1¼ inch air brake pipe and angle cocks, required on all cars. In interchange.

"(a) (2) Air brakes, location of retaining valves in accordance with A. R. A. Standard, required on all cars built new or rebuilt on or after August 1, 1933.

"(a) (3) Air brakes, including centrifugal dirt collector, in addition to above details, required on all cars built new or rebuilt on or after August 1, 1929. From owners.

"(a) (4) A. R. A. Standard triple valves required on all cars built new on or after January 1, 1919, and on all cars rebuilt on or after July 1, 1928. In interchange.

"Note: Cars equipped with new experimental design of air brake equipment designated as 'AB,' and stenciled 'AB brake experimental' will be accepted in interchange on or after November 15, 1932."

"(h) Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In interchange."

[fol. 3626] Rule amended effecting January 1, 1934, to read: (See Code revised 1933, pages 15 and 18):

"Rule 3. Cars not conforming to the following requirements will not be accepted in interchange, or from car owners, as specified:

"(a) (1) Air brakes, including quick action triple valve, pressure retaining valve, 1¼ inch air brake pipe and angle cocks, required on all cars. In interchange.

"(a) (2) Air brakes, location of retaining valves in accordance with A. R. A. Standard, required on all cars built new or rebuilt on or after August 1, 1933.

"(a) (3) Air brakes, including centrifugal dirt collector, in addition to above details, required on all cars built new or rebuilt on or after August 1, 1929. From owners.

"(a) (4) Air brakes meeting requirements of A. R. A. Specifications for Air Brakes adopted in 1933, required on all cars built new on or after September 1, 1933. From Owners. Air brakes meeting requirements of A. R. A. Specifications for air brakes adopted in 1933, or A. R. A. standard triple valves required on all cars built new between January 1, 1919, and September 1, 1933, and on all cars rebuilt on or after July 1, 1928. In Interchange.

"NOTE: The design of air brake equipment designated as 'AB' meets all of the requirements of the A. R. A. Specifications for air brakes adopted in 1933. Cars built prior to September 1, 1933, and equipped with 'AB' brakes should be so stenciled; for cars built after September 1, 1933, the date built will govern.

"(h) (1) Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In Interchange.

"(h) (2) Hand brake connection between brake staff and rod, must be of chain, effective January 1, 1935. From owners.

[fol. 5627] Rule amended effective January 1, 1935 to read (See Code revised 1934, pages 15 and 18):

"Rule 3. No car of an untried type, whether built new, altered or changed, shall be offered or accepted in interchange, nor accepted from car owner, until its size, capacity and design shall have been approved by the Transportation and Mechanical Divisions of the Association of American Railroads.

"In addition to the foregoing, all cars must conform to the following requirements to render them acceptable in interchange, or from car owner, as specified:

"(a) (1) Air brakes, including quick action triple valve, pressure retaining valve, 1¼ inch air brake pipe and angle cocks, required on all cars. In interchanges.

"(a) (2) Air brakes, location of retaining valves in accordance with A. R. A. standard, required on all cars built new or rebuilt on or after August 1, 1933. From owners.

"(a) (3) Air brakes, including centrifugal dirt collector, in addition to above details, required on all cars built new or rebuilt on or after August 1, 1929. From owners.

"(a) (4) Air brakes meeting requirements of A. R. A. Specifications for Air Brakes adopted in 1933, required on all cars built new on or after September 1, 1933. From owners. Air brakes meeting requirements of A. R. A. Specifications for air brakes adopted in 1933 or A. R. A. standard triple valves, required on all cars built new between January 1, 1919, and September 1, 1933, and on all cars rebuilt on or after July 1, 1928. In interchange. On and after January 1, 1945, all freight cars in interchange service must be equipped with air brakes meeting the requirements of the A. R. A. Specification for Air Brakes adopted in 1933. Each car owner shall make a report quarterly to the Association of American Railroads show- [fol. 5628] ing by months the number of freight cars acquired and the number of freight cars on which brake equipment is converted, which information will be filed quarterly with the Interstate Commerce Commission and the Coordinator.

"NOTE: The design of air brake equipment designated as 'AB' meets all of the requirements of the A. R. A. Specifications for air brakes adopted in 1933. Cars built prior to September 1, 1933, and equipped with 'AB' brakes should be so stenciled; for cars built after September 1, 1933, the date built will govern.

"(h) (1) Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In interchange.

"(h) (2) Hand brake connection between brake staff and rod, must be of chain, effective January 1, 1936. From owners."

Rule amended effective August 1, 1935 by addition of new fifth paragraph, reading as follows (See Supplement No. 2 to Code revised 1934, page 3):

"(a) (5) Air brake triple valves on cars having annual air brake cleaning performed on or after January 1, 1935, as indicated by air brake stenciling, must be equipped with graduating springs (piece Nos. 18286 or QT 369). In interchange."

Section (h) of rule amended effective January 1, 1936, to read (See Code revised 1935, page 19):

"(h) (1) Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In interchange.

"(h) (2) Hand brake connection between brake staff [fol. 5629] and rod, must be of chain, effective January 1, 1936. From owners.

"(h) (3) Hand brakes, geared, applied to cars built new on or after March 1, 1936, must comply with the requirements of the A. A. R. Specification. All new installations of geared hand brakes made by car owner on or after March 1, 1936, must comply with the requirement of the A. A. R. Specification. From owners."

Section (h) of rule amended effective January 1, 1937, to read (See Code revised 1936, page 19):

"(h) (1) Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt after March 1, 1925, the braking power shall conform to the standard adopted in 1924. In interchange.

"(h) (2) Hand brake connection between brake staff and rod, must be of chain, effective January 1, 1936. From owners.

"(h) (3) Hand brakes, geared, complying with the requirements of the A. A. R. Specifications for Geared Hand Brakes, required on all cars built new on or after January 1, 1937. All new installations of geared hand brakes made by car owner on or after March 1, 1936, must comply with the requirements of the A. A. R. Specification. From owners."

Rule amended effective January 1, 1939, to read (See Code revised 1938, pages 15, 16 and 20):

"Rule 3. No car of an untried type, whether built new, altered or changed, shall be offered or accepted in interchange, nor accepted from car owner, until its size, capacity and design shall have been approved by the Transportation and Mechanical Divisions of the Association of American Railroads.

"In addition to the foregoing, all cars must conform to the following requirements to render them acceptable in interchange, or from car owner, as specified:

"Note—the terms "cars built new" and "cars re- [fol. 5630] built" as specified in the various requirements of this rule, are defined in Section E of Rule 112.

"(a) (1) Air brakes, including quick action triple valve, pressure retaining valve, 1¼ inch air brake pipe and angle cocks, required on all cars. In interchange.

"(a) (2) Air brakes, location of retaining valves in accordance with A. A. R. Standard, required on all cars built new or rebuilt on or after August 1, 1933. In interchange.

"Note—It is recommended that when cars built new or rebuilt prior to August 1, 1933, receive Class I general repairs, retaining valves be located in accordance with A. A. R. Standard.

"(a) (3) Air brakes, including centrifugal dirt collector, in addition to above details, required on all cars built new or rebuilt on or after August 1, 1929. In interchange.

"(a) (4) Air brakes meeting requirements of A. A. R. Specifications for Air Brakes adopted in 1933, required on all cars built new on or after September 1, 1933, and on all cars rebuilt on or after August 1, 1937. From owners. Air brakes meeting requirements of A. A. R. Specifications for air brakes adopted in 1933 or A. A. R. standard triple valves, required on all cars built new between January 1, 1919, and September 1, 1933, and, on all cars rebuilt between July 1, 1928, and August 1, 1937. In interchange. On and after January 1, 1945, all freight cars in interchange service must be equipped with air brakes meeting the requirements of the A. A. R. Specification for Air Brakes adopted in 1933. Each car owner shall make a report quarterly to the Association of American Railroads showing by months the number of freight cars acquired and the number of freight cars on which brake equipment is converted, which information will be filed quarterly [fol. 5631] with the Interstate Commerce Commission.

"Note—The design of air brake equipment designated as 'AB' meets all of the requirements of the A. A. R. Specifications for Air Brakes adopted in 1933. Cars built prior to September 1, 1933, and equipped with 'AB' brakes should be so stenciled; for cars built on or after September 1, 1933, and rebuilt on or after August 1, 1937, the date or rebuilt will govern.

"(h) (1) Hand brake arrangement must be efficient on all cars. On all cars built new or rebuilt between March 1, 1925 and January 1, 1937, the braking power shall conform to the standard adopted in 1924, or car equipped with geared hand brake complying with the requirements of the A. A. R. Specifications for Geared Hand Brakes. In interchange.

"(h) (2) Hand brake connection between brake staff and rod, must be of chain. From owners.

"(h) (3) Hand brakes, geared, complying with the requirements of the A. A. R. Specifications for Geared

Hand Brakes, required on all cars built new on or after January 1, 1937. All new installations of geared hand brakes made by car owner on or after March 1, 1936, must comply with the requirements of the A. A. R. Specifications. From Owners."

Paragraph (a) (4) of this rule was amended in Supplement No. 1 to Code revised 1938, issued July, 1939, to read (See Supplement No. 1 to Code revised 1938, page 3):

"(a) (4) Air brakes meeting requirements of A. A. R. Specifications for air brakes adopted in 1933, required on all cars built new on or after September 1, 1933, and on all cars rebuilt on or after August 1, 1937. From owners. Air brakes meeting requirements of A. A. R. Specifications for air brakes adopted in 1933 or A. A. R. standard triple valves, required on all cars built new between January 1, 1919 and Sep- [fol. 5632] tember 1, 1933, and, on all cars rebuilt between July 1, 1928, and August 1, 1937. In interchange. On and after January 1, 1945, all freight cars in interchange service must be equipped with air brakes meeting the requirements of the A. A. R. Specification for Air Brakes adopted in 1933. Each car owner shall make a report semi-annually to the Association of American Railroads showing by months the number of freight cars acquired and the number of freight cars on which brake equipment is converted, which information will be filed semi-annually with the Interstate Commerce Commission.

"Note—The design of air brake equipment designated as 'AB' meets all of the requirements of the A. A. R. Specifications for Air Brakes adopted in 1933. Cars built prior to September 1, 1933, and equipped with 'AB' brakes should be so stenciled; for cars built on or after September 1, 1933, and rebuilt on or after August 1, 1937, the date built or rebuilt will govern."

[fol. 5633] *Axles*

The Interchange Rules effective September 1, 1911, carried no requirement as to type of axles required on cars in interchange service.

Effective October 1, 1915 a new rule was added to the Code, to read (See page 519 of 1915 M. C. B. Proceeding):

"Rule 3. (d). Cars built after October 1, 1915, with axles other than M. C. B. Standard, will not be accepted in interchange.

"Cars built prior to October 1, 1915, will not be accepted in interchange after October 1, 1917 unless equipped with M. C. B. Standard axles."

Effective date of second paragraph of Section (d), Rule 3, was extended from October 1, 1917 to October 1, 1920, in Code effective October 1, 1916. (See Code revised 1916, page 12.)

New last paragraph added to Section (d) of Rule 3, in Code effective October 1, 1917, to read (See Code revised 1917, page 14):

"After October 1, 1920, cars will not be accepted in interchange with axles of less capacity than required by the sum of the light weight and the marked capacity of the car."

Rule amended effective November 1, 1919, to read (See Code revised 1919, page 12):

"Rule 3 (d) Cars built after October 1, 1915, with axles other than A. R. A. Standard, will not be accepted in interchange.

"Cars built prior to October 1, 1915, will not be accepted in interchange after October 1, 1920, unless equipped with A. R. A. Standard axles.

"After October 1, 1920, cars will not be accepted in interchange with axles of less capacity than required by the sum of the light weight and marked capacity of the car."

Effective date of second paragraph of Section (d) of Rule 3 was extended from October 1, 1920, to October 1, 1922, in Code effective November 1, 1920 (See Code revised 1920, [fol. 5634] page 15).

Effective date of second paragraph of Section (d) of Rule 3 was extended from October 1, 1922 to January 1, 1924, in Code effective January 1, 1923 (See Code revised 1922, page 15).

Effective date of second paragraph of Section (d) of Rule 3 was extended from January 1, 1924 to January 1, 1926, in Code effective January 1, 1924 (See Code revised 1923, page 14).

Effective date of second paragraph of Section (d) of Rule 3 was extended from January 1, 1926 to January 1, 1928, in Code effective January 1, 1926 (See Code revised 1925, page 20).

Effective January 1, 1927, Section (d) of Rule 3 was relocated as Paragraphs (3), (4) and (5) of Section (a) of same rule, to read (See Code revised 1926, page 19):

"(a) (3) Axles, A. R. A. Standard, required on all cars built on or after October 1, 1915. In interchange.

"(a) (4) Axles, A. R. A. Standard, will be required, effective January 1, 1928, on all cars built prior to October 1, 1915. In interchange.

"(a) (5) Axles must be of not less capacity than required by the sum of the light weight and the marked capacity of car, on all cars. In Interchange."

Effective date of Paragraph (a) (4) of Rule 3 was extended from January 1, 1928 to January 1, 1929, in Supplement No. 1 to Code revised 1926, issued in July, 1927 (See Supplement No. 1 to Code revised 1926, page 4).

Rule amended effective January 1, 1929 to read (See Code revised 1928, page 15):

"(a) (4) Axles, A. R. A. Standard, required on all cars built new or rebuilt on or after October 1, 1915, and on all cars rebuilt on or after July 1, 1928. In interchange.

[fol. 5635] "(a) (5) Axles, A. R. A. Standard, will be required effective January 1, 1930, on all cars built prior to October 1, 1915. In interchange.

"(a) (6) Axles must be of not less capacity than required by the sum of the light weight and the marked capacity of car, on all cars. In interchange."

Rule amended effective January 1, 1930, to read (See Code revised 1929, page 15):

"(a) (4) Axles, A. R. A. Standard, required on all cars, except cars of 70,000 lb. capacity built prior to October 1, 1915. In interchange.

"(a) (5) Axles, A. R. A. Standard, will be required on all cars of 70,000 lb. capacity, effective January 1, 1935. In interchange.

"(a) (6) Axles must be of not less capacity than required by the sum of the light weight and the load limit markings of car, on all cars. In interchange."

Paragraphs (4), (5) and (6) of Section (a) of Rule 3 relocated as new paragraphs (5), (6) and (7) effective January 1, 1932. (See Code revised 1932, page 15.)

Effective date of Paragraph (a) (6) of Rule 3 extended from January 1, 1935 to January 1, 1936, in Supplement No. 1 to Code revised 1933 issued in July, 1934 (See Supplement No. 1, page 2).

Paragraphs (5), (6) and (7) of Section (a) of Rule 3 relocated as new Paragraphs (6), (7) and (8), and effective date of new Paragraph (7) extended from January 1, 1936 to January 1, 1937, effective August 1, 1935, in Supplement No. 2 to Code revised 1934 issued in July, 1935 (See Supplement No. 2, page 2).

Effective date of Paragraph (a) (7) extended from January 1, 1937 to January 1, 1938 in Supplement No. 2 to Code [fol. 5636] revised 1936, issued in *in* July, 1937 (See Supplement No. 2, Page 2).

Rule amended effective January 1, 1938, to read (See Code revised 1937, page 16):

"Rule 3. (a) (6) Axles, A. A. R. Standard, required on all cars. In interchange.

"(a) (7) Axles must be of not less capacity than required by the sum of the light weight and the load limit markings of car, on all cars. In interchange.

Rule amended effective January 1, 1939, to read (See Code revised 1938, page 16):

"Rule 3. (a) (5) Axles, A. A. R. Standard, of not less capacity than required by the sum of the light weight and the load limit markings of car, required on all cars. In interchange."

[fol. 5637] Brake Beams

The Interchange Rules effective September 1, 1911, carried no requirement as to type of brake beams required on cars in interchange service.

Effective October 1, 1914, a new rule was added to the Code, to read (See Code revised 1914, page 5):

"Rule 3. (c) Cars built after October 1, 1914, will not be accepted in interchange unless equipped with either the No. 1 or the No. 2 M. C. B. Standard brake beams and so marked plainly on strut by stamping or casting on."

Rule amended effective October 1, 1916, to read (See Code revised 1916, pages 10 and 12):

"Rule 3. (c) Cars built after October 1, 1914, and prior to January 1, 1917, will not be accepted in interchange unless equipped with either the No. 1 or the No. 2 M. C. B. Standard brake beam, as indicated by the light weight of the car.

"Cars built after January 1, 1917, must be equipped with metal brake beams of not less than the capacity of the No. 2 M. C. B. Standard, or stronger, as the conditions may require.

"All of the brake beams referred to shall have the letters 'M. C. B.' and proper number plainly stamped or cast on strut, as required by the specifications.

"After October 1, 1918, cars will not be accepted in interchange unless equipped with all-metal brake beams."

Rule amended effective October 1, 1917, to read (See Code revised 1917, pages 12 and 14):

"Rule 3 (c) Cars built after October 1, 1914, and prior to January 1, 1917, will not be accepted in interchange unless equipped with either the No. 1 or the No. 2 M. C. B. Standard brake beam, as indicated by the [fol. 5638] light weight of the car.

"No. 1 M. C. B. Standard brake beams must not be used on cars having a light weight in excess of 35,000 lbs.

"Cars built after January 1, 1917, must be equipped with metal brake beams of not less than the capacity of the No. 2 M. C. B. Standard, or stronger, as the conditions may require.

"All of the brake beams referred to shall have the letters 'M. C. B.' and proper number plainly stamped or cast on strut, as required by the specifications.

"After October 1, 1920, cars will not be accepted in interchange unless equipped with all-metal brake beams.

"After January 1, 1918, all brake beams applied to new cars shall be in accordance, in all respects, with the requirements of dimensions shown on Sheets M. C. B. 17 and 17-A, Standards."

Rule amended effective November 1, 1918, to read (See Code revised 1918, pages 13 and 14):

"Rule 3. (c) Cars built after October 1, 1914, and prior to January 1, 1917, will not be accepted in interchange unless equipped with either the No. 1 or the No. 2 M. C. B. brake beam, as indicated by the light weight of the car; the No. 1 beam must not be used on cars having a light weight in excess of 35,000 lb.

"Cars built after January 1, 1917, or cars receiving general repairs after October 1, 1918, must be equipped with metal brake beams of not less than the capacity of the No. 2 M. C. B., or stronger, as the conditions may require.

"All of the M. C. B. brake beams referred to shall have the letters 'M. C. B.' and proper number plainly stamped or cast on strut, as required by the specifications.

"After October 1, 1920, cars will not be accepted in interchange unless equipped with all-metal brake beams. [fol. 5639] "After January 1, 1918, all brake beams applied to new cars shall be in accordance, in all respects, with the requirements of dimensions shown on Sheets M. C. B. 17 and 17-A, Standards."

Rule amended effective November 1, 1919, to read (See code revised 1919, pages 11 and 12):

"Rule 3 (c). Cars built after October 1, 1914, and prior to January 1, 1917, will not be accepted in interchange unless equipped with either the No. 1 or the No. 2 A. R. A. brake beam, as indicated by the light weight of the car; the No. 1 beam must not be used on cars having a light weight in excess of 35,000 lb.

"Cars built after January 1, 1917, or cars receiving general repairs after October 1, 1918, must be equipped with metal brake beams of not less than the capacity of

the No. 2 A. R. A., or stronger, as the conditions may require.

"All of the A. R. A. brake beams referred to shall have the letters 'A. R. A.' and proper number plainly stamped or cast on strut, as required by the specifications.

"Note—Where brake beams already have the letters 'M. C. B.' stamped or cast on the strut, they will be considered as complying with this rule.

"After October 1, 1920, cars will not be accepted in interchange unless equipped with all-metal brake beams.

"After January 1, 1918, all brake beams applied to new cars shall be in accordance, in all respects, with the requirements of dimensions shown on Sheets A. R. A. 17, 17-A and 17-B, Standards."

Rule amended effective January 1, 1922, to read (See Code revised 1921, page 14):

"Rule 3 (c). Cars built after October 1, 1914, and prior to January 1, 1917, will not be accepted in interchange unless equipped with either the No. 1 or the [fol. 5640] No. 2 A. R. A. brake beam, as indicated by the light weight of the car; the No. 1 beam must not be used on cars having a light weight in excess of 35,000 lb-.

"Cars built after January 1, 1917, or cars receiving general repairs after October 1, 1918, must be equipped with metal brake beams of not less than the capacity of the No. 2 A. R. A., or stronger, as the conditions may require.

"All of the A. R. A. brake beams referred to shall have the letters 'A. R. A.' and proper number plainly stamped or cast on strut, as required by the specifications.

"Note—Where brake beams have the letters 'M. C. B.' stamped or cast on the strut, they will be considered as complying with this rule.

"Cars will not be accepted in interchange unless equipped with all-metal brake beams.

"After January 1, 1918, all brake beams applied to new cars shall be in accordance, in all respects, with the requirements of dimensions shown in the A. R. A. Manual of Standard and Recommended Practice."

Second paragraph of Section (c) of Rule 3 amended effective January 1, 1923, to read (See Code revised 1922, page 14):

"Rule 3 (c) (Second paragraph) Cars built after January 1, 1917, or cars receiving general repairs after October 1, 1918, must be equipped with metal brake beams of not less than the capacity of the No. 2 A. R. A. brake beam."

Rule amended and relocated as Section (b) of Rule 3 effective January 1, 1927, to read (See Code revised 1926, pages 19 and 20):

"Rule 3. (b) (1). Brake beams, A. R. A., on all cars built on or after January 1, 1917, must be of not less than the capacity of the No. 2 beam. In interchange.

"(b) (2). Brake beams, A. R. A., on all cars built on or after October 1, 1914, and prior to January 1, 1917, having light weight of *of* 35,000 lbs. or under [fol. 5641] must be of not less capacity than the No. 1 beam; if in excess of 35,000 lbs., not less than capacity of the No. 2 beam. In interchange.

"(b) (3). The A. R. A. brake beams referred to must conform to requirements of the Manual of Standard and Recommended Practice, including the letters 'A. R. A.' and class number cast or stamped on strut; the letters 'M. C. B.' is previously cast or stamped on strut will be considered as meeting this requirement.

"(b) (4). Brake beams, metal, required on all cars. In interchange.

"(b) (5). Brake beams, A. R. A., of not less capacity than the No. 2 shall be applied to all cars receiving general repairs.

"(b) (6). Brake beams on all cars built on or after September 1, 1909, must be hung from the trucks, effective January 1, 1928. From owners."

Effective date of Paragraph (b) (6) of Rule 3 was extended from January 1, 1928 to January 1, 1929, in Supplement No. 1 to Code revised 1926, issued July, 1927 (See Supplement No. 1 to Code revised 1926, page 4).

Paragraphs (1) and (6) of Section (b) of Rule 3 were amended effective July 1, 1928, to read (See Supplement No. 1 to Code revised 1927, page 2):

"Rule 3. (b) (1). Brake beams, A. R. A., on all cars built new on or after January 1, 1917, and on all cars rebuilt on or after July 1, 1928, must be of not less than the capacity of the No. 2 beam. In interchange.

"(b) (6). Brake beams, A. R. A., on all cars built new on or after September 1, 1909, and on all cars rebuilt on or after July 1, 1928, must be hung from the trucks, effective January 1, 1930. From owners."

Effective date of Paragraph (b) (6) of Rule 3 was extended from January 1, 1930 to January 1, 1931, and an- [fol. 5642] nounced in Supplement No. 1 to Code revised 1928, page 3.

Effective date of Paragraph (b) (6) of Rule 3 was extended from January 1, 1931 to January 1, 1932 and announced in Supplement No. 1 to Code revised 1929, page 3.

Rule amended effective January 1, 1931, to read (See Code revised 1930, pages 15 and 16):

"Rule 3. (b) (1) Brake beams, A. R. A., on all cars built new on or after January 1, 1917, and on all cars rebuilt on or after July 1, 1928, must be of not less than the capacity of the No. 2 beam. In interchange.

"(b) (2) The A. R. A. brake beam referred to must conform to requirements of the Manual of Standard and Recommended Practice, including the letters 'A. R. A.' and class number cast or stamped on the strut; the letters 'M. C. B.' if previously cast or stamped on strut will be considered as meeting this requirement.

"(b) (3) Brake beams, metal, required on all cars. In interchange.

"(b) (4) Brake beams, A. R. A., of not less capacity than the No. 2, shall be applied to all cars receiving general repairs.

"(b) (5) Brake beams on all cars built new on or after September 1, 1909, and on all cars rebuilt on or after July 1, 1928, must be hung from the trucks, effective January 1, 1932. From owners."

Rule amended effective January 1, 1935, to read (See Code revised 1934, pages 15 and 16):

"Rule 3. (b) (1) Brake beams, A. R. A. Standard No. 15 or A. R. A. No. 3, required on all cars built new on or after January 1, 1935. In interchange.

"(b) (2) Brake beams, A. R. A., of not less than the capacity of the No. 2 beam, required on all cars. In interchange.

"(b) (3) The A. R. A. brake beams referred to must conform to requirements of the Manual of Standard and Recommended Practice, including the letters 'A. [fol. 5643] R. A. and class number cast or stamped on strut; the letters 'M. C. B.', if previously cast or stamped on strut will be considered as meeting this requirement.

"(b) (4) Brake beams on all cars built new on or after September 1, 1909, and on all cars rebuilt on or after July 1, 1928, must be hung from the trucks, effective January 1, 1932. From owners."

Paragraph (b) (1) of Rule 3 amended effective August 1, 1937, to read (See Supplement No. 1 to Code revised 1936, page 3):

"(b) (1) Brake beams, A. A. R. Standard No. 15 or A. A. R. No. 3 required on all cars built new on or after January 1, 1935, and on all cars rebuilt on or after August 1, 1937. In interchange."

Paragraph (b) (4) of Rule 3 amended effective January 1, 1939, to read (See Code revised 1938, page 17):

"(b) (4) Brake beams on all cars built new on or after September 1, 1909, and on all cars rebuilt on or after July 1, 1928, must be hung from the trucks. In interchange."

[fol. 5644] Brake Beam Hangers

The interchange rules effective September 1, 1911 carried no requirement as to type of brake beam hangers required on cars in interchange.

Effective January 1, 1930, a new rule was added to the Code, to read (See Code revised 1929, page 16):

"Rule 3. (b) (7). Brake beam hangers and brake beam hanger pins conforming to A. R. A. Standard required on all cars built new or rebuilt on or after January 1, 1930. From owners.

"(b) (8) Brake beam hangers designed with eyes which are not formed solid, prohibited, effective January 1, 1933, on all cars. From owners."

Paragraph (b) (7) of Rule 3 amended effective August 1, 1930, to read (See Supplement No. 1 to Code revised 1929, page 4):

"Rule 3. (b) (7) Brake beam hangers and brake beam hanger pins conforming to A. R. A. Recommended Practice, or equivalent in strength, required on all cars built new or rebuilt on or after January 1, 1930. From owners."

Effective January 1, 1931, Paragraphs (7) and (8) of Section (b) of Rule 3 were relocated as new Paragraphs (6) and (7) (See Code revised 1930, page 16).

Effective date of Paragraph (b) (7) of Rule 3 was extended from January 1, 1933 to January 1, 1934 and announced in Supplement No. 2 to Code revised 1931, page 2.

Effective date of Paragraph (b) (7) of Rule 3 was extended from January 1, 1934, to January 1, 1935, and announced in Suppleemnt No. 1 to Code revised 1932, page 2.

Effective date of Paragraph (b) (7) of Rule 3 was extended from January 1, 1935 to January 1, 1936, and announced in Supplement No. 1 to Code revised 1933, page 2. [fol. 5645] Effective date of Paragraph (b) (7) of Rule 3 was extended from January 1, 1936 to January 1, 1937, and announced in Supplement No. 2 to Code revised 1934, page 2.

Effective date of Paragraph (b) (7) of Rule 3 was extended from January 1, 1937 to January 1, 1938, and announced in Supplement No. 1 to Code revised 1935, page 2.

Rule amended effective January 1, 1938, to read (See Code revised 1937, page 17):

"Rule 3. (b) (5) Brake beam hangers and brake beam hanger pins conforming to A. A. R. Recommended

Practice or equivalent in strength, required on all cars built new or rebuilt on or after January 1, 1930. From owners.

"(b) (6) Brake beam hangers designed with eyes which are not formed solid, prohibited on all cars. From owners."

[fol. 5646] Couplers

The Interchange Rules in effect from September 1, 1911 to October 1, 1914, contained no provisions with respect to type of couplers required on cars in interchange.

A new rule, 3(b), was added to the Code effective October 1, 1914, to read (See Code revised 1914, page 5):

"Rule 3. (b) Cars will not be accepted in interchange equipped with stem or spindle coupler attachments."

Amended effective October 1, 1917, to read (See Code revised 1917, page 12):

"Rule 3. (b) Cars will not be acepted in interchange equipped with stem or spindle coupler attachments or American continuous draft rods."

A new Paragraph (m) was added to Rule 3 effective November 1, 1918, to read (See Code revised 1918, page 16):

"Rule 3. (m) Cars built after January 1, 1919, must be equipped with coupler operating lever connected direct with coupler lock or lock lift without the use of links, clevises or chains."

A new paragraph, (o), was added to Rule 3 effective November 1, 1920, to read (See Code revised 1920, page 18):

"Rule 3. (o) Cars built after November 1, 1920, will not be accepted in interchange unless equipped with 6 inch by 8 inch shank A. R. A. Standard Type 'D' couplers."

Rule 3 (b) amended effective January 1, 1923, to read (See Code revised 1922, page 14):

"Rule 3. (b) Cars will not be accepted in interchange equipped with stem or spindle coupler attachments or American continuous draft rods.

"After January 1, 1924, cars equipped with couplers having riveted yoke without lugs will not be accepted in interchange."

[fol. 5647] Effective data of second paragraph of Rule 3 (b) was etxended to January 1, 1925 on June 15, 1923.

Rule 3 (o) was amended effective January 1, 1924, to read (See Code revised 1923, page 17):

"Rule 3. (o) Cars built after November 1, 1920, will not be accepted from owner unless equipped with 6 in. by 8 in. shank A. R. A. Standard Type 'D' couplers."

Rule 3 (b), second paragraph, amended effective January 1, 1925, to read (See Code revised 1924, page 19):

"Rule 3. (b) (Second paragraph) After January 1, 1926, cars equipped with couplers having riveted yoke without lugs, where such yokes are riveted directly to the coupler, will not be accepted in interchange.

Effective January 1, 1925, former Paragraph (o) of Rule 3 relocated as new Paragraph (p).

Effective date of second paragraph of Rule 3 (b) extended to January 1, 1927 in July, 1925.

Rule amended effective January 1, 1927, to read (See Code revised 1926, pages 20 and 21):

"Rule 3. (c) (1) Couplers, A. R. A. Standard Type 'D' with 6x8 shank, required on all cars built on or after November 1, 1920. From owners.

"(c) (2). Couplers having stem or spindle attachments, or American continuous draft rods, prohibited on all cars. In interchange.

"(c) (3). Couplers having riveted yokes without lugs, where such yokes are riveted directly to the coupler, prohibited, effective January 1, 1928, on all cars. In interchange.

"(c) (4). Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains, required on all cars built on or after January 1, 1919. In interchange."

[fol. 5648] Effective date of Paragraph (c) (3) of Rule 3 extended to January 1, 1929, in July, 1927.

A new paragraph, (c) (5), was added to Rule 3 effective January 1, 1928, to read (See Code revised 1927, page 16):

"Rule 3. (c) (5). Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains, shall be applied to all cars when replacing broken or missing levers where practicable, or when cars receive general repairs."

Effective July 1, 1928, Paragraphs (c-1), (c-4), (c-5) and (c-6) of Rule 3 were amended to read as follows (See Supplement No. 1 to Code revised 1927, pages 4 and 5):

"Rule 3. (c) (1). Couplers, A. R. A. Standard Type 'D' with 6 x 8 inch shank required on all cars built new on or after November 1, 1920; and A. R. A. Standard Type 'D' with 5 x 7 or 6 x 8 inch shanks, required on all cars rebuilt on or after July 1, 1928. From owners.

"(c) (4). Couplers having liner blocks applied between butt and riveted yoke, if not integral with either butt or yoke, prohibited, effective January 1, 1929, on all cars. In interchange.

"(c) (5). Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains, required on all cars built new on or after January 1, 1919, and on all cars rebuilt on or after July 1, 1928. In interchange.

"(c) (6) Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains shall be applied to all cars when replacing broken or missing levers where practicable, or when cars receive general repairs.

Rule amended effective January 1, 1932, to read (See Code revised 1931, pages 16 and 17):

"Rule 3. (c) (1). Couplers, A. R. A. Standard Type [fol. 5649] 'E' with 6¼ x 8 inch shank, or A. R. A. Alternate Standard 6¼ x 8 inch swivel type, required on all cars built new on or after August 1, 1932. From owners.

"(c) (2) Couplers, A. R. A. Standard Type 'E' with 6¼ x 8 inch shank, or A. R. A. Standard Type 'D' with 6 x 8 inch shank or A. R. A. Alternate Standard 6¼ x 8 swivel type, or couplers having Type 'D' head designed

with swivel or radial butt, required on all cars built new between November 1, 1920 and August 1, 1932. From owners.

"(c) (3) Couplers, A. R. A. Standard Type 'E' with 5 x 7 or 6¼ x 8 inch shank, or A. R. A. Alternate Standard swivel type, or A. R. A. Standard Type 'D' with 5 x 7 or 6 x 8 inch shank or couplers having Type 'D' head designed with swivel or radial butt, required on all cars rebuilt on or after July 1, 1928. From owners.

"(c) (4) Couplers having stem or spindle attachments, or American continuous draft rods, prohibited on all cars. In interchange.

"(c) (5) Couplers having riveted yokes without lugs, where such yokes are riveted directly to the coupler, prohibited, effective January 1, 1929, on all cars. In interchange.

"(c) (6) Couplers having liner blocks applied between butt and riveted yoke, if not integral with either butt or yoke, prohibited, effective January 1, 1929, on all cars. In interchange.

"(c) (7) Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains, required on all cars built new on or after January 1, 1919, and on all cars rebuilt on or after July 1, 1928. In interchange.

"(c) (8) Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains, shall be applied to all cars when replacing broken or missing levers where practicable, or when cars receive general repairs."

[fol. 5650] Effective dates of Paragraphs (c-1) and (c-2) of Rule 3 were extended to January 1, 1933 in July, 1932.

A new Paragraph (c-9) was added to Rule 3 effective January 1, 1933, to read (See Code revised 1932, page 17):

"Rule 3. (c) (9). Coupler operating rigging of the rotating type handle (which pulls out and up through an arc similar to type shown on Plate B of the United States Safety Appliance specifications), required on all cars built new or rebuilt on or after August 1, 1933.

"Note—It is recommended that where cars built prior to August 1, 1933, receive Class I general repairs, and new couplers are applied, that the rotating type handle of uncoupling rigging be applied."

Effective date of Paragraph (c-1) extended to August 1, 1933 on December 31, 1932.

Effective January 1, 1933, Paragraph (c-2) of Rule 3 was amended to read (See Supplement No. 1 to Code revised 1932, page 3):

"Rule 3. (c) (2). Couplers, A. R. A. Standard Type 'E' with 6¼ x 8 inch shank, or A. R. A. Standard Type 'D' with 6 x 8 inch shank, or A. R. A. Alternate Standard 6¼ x 8 inch swivel type, or couplers having Type 'D' head designed with swivel or radial butt, required on all cars built new, between November 1, 1920 and August 1, 1933. From owners."

Paragraphs (c-5) and (c-9) amended effective January 1, 1935, to read (See Code revised 1934, page 17):

"Rule 3. (c) .(5) Couplers having riveted yokes without lugs, where such yokes are riveted directly to the coupler, prohibited. In interchange.

"(c) (9) Coupler operating rigging of the rotating type handle (which pulls out and up through an arc similar to type shown on Plate B of the United States Safety Appliance specifications); required on all cars built new or rebuilt on or after August 1, 1933.

"Note—It is recommended that where cars built prior to August 1, 1933, receive Class I general repairs and new couplers are applied, that the rotating type [fol. 5651] handle of uncoupling rigging be applied."

A new Paragraph (c-10) was added to Rule 3 effective August 1, 1936, to read (See Supplement No. 1 to Code revised 1935, page 3):

"Rule 3. (c) (10) Coupler, Type 'D', cast after August 1, 1936, prohibited, effective January 1, 1937, on all cars. In interchange."

Paragraphs (c-1) and (c-3) amended, effective August 1, 1937, to read (See Supplement No. 1 to Code revised 1936, page 3):

"Rule 3. (c) (1) Couplers, A. A. R. Standard Type 'E' with 6¼ x 8 inch shank, or A. A. R. Alternate Standard 6¼ x 8 inch swivel type, required on all cars built new on or after August 1, 1933, and on all

cars rebuilt on or after August 1, 1937, except that on rebuilt cars 6 x 8 inch type 'D' couplers may be used. Where limitations in underframe construction on rebuilt cars make it impractical to apply 6¼ x 8 inch shank type 'E' or 6 x 8 inch shank type 'D' couplers, 5 x 7 inch shank types 'D' or 'E' couplers with key attachments are permissible. From owners.

"(c) (3) Couplers, A. A. R. Standard Type 'E' with 5 x 7 or 6¼ x 8 inch shank, or A. A. R. Alternate Standard swivel type, or A. R. R. Standard Type "D" with 5 x 7 or 6 x 8 inch shank, or couplers having Type "D" head designed with swivel or radial butt, required on all cars rebuilt between July 1, 1928 and August 1, 1937. From owners."

Effective August 1, 1938, new Paragraphs (c-11) and (c-12) were added to Rule 3, to read (See Supplement No. 2 to Code revised 1937, page 3):

"Rule 3. (c) (11) Couplers, former Standard or Temporary Standard having 5 x 5 inch shanks, prohibited, effective January 1, 1940, on all cars. From owners.

"(c) (12) Couplers, former Standard (Except Type D) or temporary Standard having 5x7 inch shanks, prohibited, effective January 1, 1942, on all cars. From owners."

Paragraphs (c-7) and (c-8) of Rule 3 amended effective January 1, 1939, to read (See Code revised 1938, page 18):

[fol. 5652] "Rule 3. (c) (7) Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins, or chains, required on all cars built new between January 1, 1919 and August 1, 1933, and on all cars rebuilt between July 1, 1928 and August 1, 1933. In interchange.

"(c) (8) Coupler operating levers connected direct with coupler lock or lift without the use of links, clevises, clevis pins or chains, shall be applied to all cars built prior to January 1, 1919, when replacing broken or missing levers where practicable, or when cars receive general repairs, preferably as specified in note following Paragraph (9)."

Effective date of Paragraph (c-11) extended to January 1, 1941 on August 1, 1939; and further extended to January 1, 1942 on August 1, 1940.

[fol. 5653] *Draft Gears*

The Interchange Rules effective September 1, 1911, contain no provisions as to type of draft gears required on cars in interchange.

Effective January 1, 1934, a new rule was added to the Code, to read (See Code revised 1933, page 17):

"Rule 3. (d) (1). Draft gear, complying with A. R. A. Standard specifications for draft gears for freight service including certificate of approval, required on all cars built new on or after January 1, 1934. From owners.

"(d) (2). Draft gear, new, when applied to any car on or after January 1, 1934, shall, when practicable, comply with the foregoing specifications."

Note added to Paragraph (d) (1) of Rule 3, effective January 1, 1935, to read (See Code revised 1934, page 17):

"Note—The words 'draft gear,' as used in this rule, do not cover cushion unde frame construction."

Paragraph (d) (2) of Rule 3, amended effective January 1, 1935, to read (See Code revised 1934, page 17):

"Rule 3. (d) (2). Draft gear, new, when applied to any car on or after January 1, 1935, shall comply with the foregoing specifications unless the pocket dimensions of the car are such that an approved gear cannot be applied."

Paragraph (d) (1) of Rule 3 amended effective August 1, 1937, to read (See Supplement No. 1 to Code revised 1936, page 3):

"Rule 3. (d) (1). Draft gears complying with A. A. R. Standard specifications for draft gears for freight service including certificate of approval, required on all cars built new on or after January 1, 1934, and on all cars rebuilt on or after August 1, 1937, except that on rebuilt cars where limitations in underframe construc-
[fol. 5654] tion make it impractical to apply approved types of friction draft gears, non-approved types ac-

ceptable to the Committee on Couplers and Draft Gears are permissible. From owners."

[fol. 5655] *Trucks*

The Interchange Rules in effect from September 1, 1911 to January 1, 1928, contained no provisions with respect to type of trucks required under cars in interchange.

Effective January 1, 1928, a new rule was added as Paragraph (t) (1) to Rule 3, reading (See Code revised 1927, page 17):

"Rule 3. (t) (1). Truck side frames, cast-steel, conforming to A. R. A. Specifications, required on all cars built on or after July 1, 1928. From owners."

Rule amended effective January 1, 1929, to read (see Code revised 1928, page 17):

"Rule 3. (t) (1). Trucks, new, shall be equipped with cast-steel side frames conforming to A. R. A. Specifications, when applied to new or rebuilt car bodies on or after October 1, 1929. From owners."

Rule amended and new Paragraph (t) (2) added, effective August 1, 1929, to read (See Supplement No. 1 to Code revised 1928, pages 4 and 5):

"Rule 3. (t) (1). Trucks, new, when applied to any car on or after October 1, 1929, shall be equipped with cast-steel side frames conforming to current A. R. A. Specifications, and shall have month and year manufactured, also the letters 'A. R. A.', followed by the year date of specification, cast on the outer face. From owners.

"(t) (2). Trucks, second hand, when applied to car bodies built new or rebuilt on or after January 1, 1930, shall be equipped with cast-steel side frames.

"Note—Cast-steel side frames on such secondhand trucks should preferably comply with current A. R. A. Specifications, but existing cast-steel side frames of other design and specification may be used. However, when same are replaced with new cast-steel side frames, by car owner, such new frames shall comply with current A. R. A. specifications."

[fol. 5656] New paragraph (t) (3) added, effective August 1, 1930, to read (See Supplement No. 1 to Code revised 1929, page 4):

"Rule 3. (t) (3). Trucks with arch bars, prohibited, effective January 1, 1936, under all cars. From owners."

Effective August 1, 1935, note following Paragraph (t) (2) was modified, new Paragraph (t) (3) and note added, and former Paragraph (t) (3) modified and relocated as Paragraph (t) (4), to read (See Supplement No. 1 to Code revised 1934, page 4):

"Rule 3. (t) (2). Trucks, secondhand, when applied to car bodies built new or rebuilt on or after January 1, 1930, shall be equipped with cast-steel side frames. From owners.

"Note—Cast-steel side frames on such second hand trucks should preferably comply with current A. A. R. Specifications, but existing cast-steel side frames of other design and specification may be used provided such frames comply with the provisions of Paragraph (3). When same are replaced with new cast-steel side frames, by car owner such new frames shall comply with current A. A. R. Specifications.

"(t) (3). Truck side frames, cast-steel, secondhand, must not be substituted for any other side frames (Cast-steel, pressed or structural steel or arch bar type) unless entirely free from cracks, fractures, excessive wear or porosity, or welds not performed and marked strictly in accordance with Rule 23. Secondhand side frames of older designs, such as those having 'T' or 'L' section compression or tension members, must be confined to owner's equipment and then only when such frames have been removed from same owner's equipment, or for replacements in kind on foreign cars.

"Note—To determine if such secondhand frames are suitable for further service, thorough cleaning and careful inspection must be made. Frames having any of the above defects, or which are otherwise unsuitable [fol. 5657] for re-application, are to be immediately destroyed.

"(t) (4) Trucks, with arch bars, prohibited, effective January 1, 1938, under all cars. From owners."

Paragraph (t) (3) of Rule 3 amended, effective January 1, 1937, to read (See Code revised 1936, page 21):

"Rule 3. (t) (3) Truck side frames, cast-steel, secondhand, must not be substituted for any other side frames (cast-steel, pressed or structural steel or arch bar type) unless entirely free from cracks, fractures, excessive wear, excessive corrosion, or porosity, or welds not performed and marked strictly in accordance with Rule 23. Secondhand side frames of older designed, such as those having 'T' or 'L' section compression or tension members, must be confined to owner's equipment and then only when such frames have been removed from same owner's equipment, or for replacements in kind on foreign cars.

"Note—To determine if such secondhand frames are suitable for further service, thorough cleaning and careful inspection must be made. Frames having any of the above defects, or which are otherwise unsuitable for re-application, are to be immediately destroyed."

Rule amended effective January 1, 1938, to read (See Code revised 1937, pages 21 and 22):

"Rule 3. (t) (1) Trucks, new, when applied to any car on or after March 1, 1930, shall be equipped with cast-steel side frames conforming to current A. A. R. Specifications, and shall have month and year manufactured, also the letters 'A. A. R.' or 'A. R. A.', followed by the year date of specification, cast on the outer face. From owners.

"(t) (2-a) Trucks, secondhand, when applied to car bodies built new or rebuilt between January 1, 1930 and August 1, 1937, shall be equipped with cast-steel side frames. From owners.

"Note—Cast-steel side frames on such secondhand [fol. 5658] trucks should preferably comply with current A. A. R. Specifications, but existing cast-steel side frames of other design and specification may be used provided such frames comply with the provisions

of Paragraph (3). When same are replaced with new cast-steel side frames, by car owner, such new frames shall comply with current A. A. R. Specifications.

"(t) (2-b) Trucks, secondhand, when applied to car bodies built new or rebuilt on or after August 1, 1937, shall be equipped with U section cast-steel side frames. From owners.

"Note—U section cast-steel side frames on such secondhand trucks should preferably comply with current A. A. R. Specifications, but existing U section cast-steel side frames of other specifications may be used providing such frames comply with provisions of first sentence of Paragraph (3). When same are replaced with new cast-steel side frames, by car owner, such new frames shall comply with current A. A. R. Specifications.

"(t) (3) Truck side frames, cast-steel, secondhand, must not be substituted for any other side frames (cast-steel, pressed or structural steel or arch bar type) unless entirely free from cracks, fractures, excessive wear, excessive corrosion, or porosity, or welds not performed and marked strictly in accordance with Rule 23. Secondhand side frames of older designs, such as those having 'T' or 'L' section compression or tension members, must be confined to owner's equipment, and then only when such frames have been removed from same owner's equipment, or for replacements in kind on foreign cars.

"Note—To determine if such secondhand frames are suitable for further service, thorough cleaning and careful inspection must be made. Frames having any of the above defects, or which are otherwise unsuitable for re-application are to be immediately destroyed.

"(t) (4) Trucks with arch bars, prohibited, effective July 1, 1938, under all cars. From owners."

[fol. 5659] Paragraph (t) (3) amended, effective January 1, 1939, to read (See Code, revised 1938, page 22):

"Rule 3. (t) (3) Truck side frames, cast-steel, secondhand, must not be substituted for any other side

frames (cast-steel, pressed or structural steel or arch bar type) unless entirely free from cracks, fractures, excessive wear, excessive corrosion, or porosity, or welds not performed and marked strictly in accordance with Rule 23. Secondhand side frames of older designs, such as those having 'T' or 'L' section compression or tension members, must be confined to owner's equipment and then only when such frames have been removed from same owner's equipment, or for replacement in kind on foreign cars. Effective January 1, 1940, the application of welded side frames will be prohibited: However, this provision does not require the removal from owned cars, or permit the removal from foreign cars, of such welded side frames welded and applied prior to January 1, 1940, unless defective.

"Note—To determine if such secondhand frames are suitable for further service, thorough cleaning and careful inspection must be made. Frames having any of the above defects, or which are otherwise unsuitable for re-application, are to be immediately destroyed."

Effective date of Paragraph (t) (4) extended to July 1, 1939, in December, 1938.

Effective date of Paragraph (t) (4) extended to December 31, 1939, in May, 1939.

Effective date of Paragraph (t) (3) extended to January 1, 1941 in August, 1939.

Note added to Paragraph (t) (4) effective January 1, 1940, and the paragraph amended to read (See Supplement No. 1 to Code revised 1940, page 2):

"Rule 3. (t) (4) Trucks, with arch bars, prohibited under all cars. In interchange.

"Note—The movement of cars equipped with arch [fol. 5660] bar trucks must be confined to owner's rails, except that they are acceptable in interchange from owner for loading or for unloading within the same terminal switching district in which the interchange occurs, providing that no road haul is involved in such movement, and providing that cars so interchanged will be immediately returned to owner's rails when loading or unloading is accomplished.

"Cars equipped with arch bar trucks are acceptable for movement between plants located in the same switching district, providing no road haul is involved.

"Locomotive cranes, locomotive tenders, and derricks built prior to January 1, 1940 and equipped with arch bar trucks, may be accepted in interchange or from owners prior to January 1, 1941, and moved under such controlled speeds as may be required by handling railroad. Effective January 1, 1941, such equipment will be prohibited in interchange. (This paragraph does not apply to contractors' work equipment other than mentioned above.)

Effective date of Paragraph (t) (3) extended to January 1, 1942 on August 1, 1940.

Paragraph (t) (4) and note amended effective January 1, 1941, to read (See Code revised 1940, page 22):

"Rule 3. (t) (4). Trucks, with arch bars, prohibited under all cars, locomotive cranes, locomotive tenders and derricks. In interchange.

"Note—The movement of cars equipped with arch bars must be confined to owner's rails, except that they are acceptable in interchange from owner for loading or for unloading within the same terminal switching district in which the interchange occurs, providing that no road haul is involved in such movement, and providing that cars so interchanged will be immediately returned to owner's rails when loading or unloading is [fol. 5661] accomplished.

"Cars equipped with arch bar trucks are acceptable for movement between plants located in the same switching district, providing no road haul is involved."

[fol. 5662] *Underframes*

The Interchange Rules effective September 1, 1911, contain no provisions with respect to underframe requirements on cars in interchange.

A new rule was added effective January 1, 1927, to read (See Code revised 1926, page 24):

"Rule 3. (U) (1) Underframe, steel, on all cars (other than tank cars) built on or after January 1, 1927, must have center sills with a minimum cross sectional area of

24 square inches between the draft back stops. From owners.

"(U) (2) Underframe, etc.: Effective January 1, 1929, all cars built prior to January 1, 1927, must be equipped with either steel underframe, or steel center sills, or wood or metal draft arms extending beyond the body bolster, or metal draft arms extending to metal body bolster and securely riveted to same. From owners."

Effective date of Paragraph (U) (2) extended to January 1, 1930, on August 1, 1927.

Rule amended effective January 1, 1929, to read (See Code revised 1928, pages 18 and 19):

"Rule 3. (U) (1). Underframe, steel, on all cars (other than tank cars) built new on or after January 1, 1927, or rebuilt on or after July 1, 1928, must have center sills with a minimum cross sectional area of 24 square inches between the draft back stops. A tolerance of one square inch below minimum will be considered as meeting this requirement. From owners.

"(U) (2). Underframe, etc.: Effective January 1, 1931, no car of all-wood construction (now defined as Class F under Rule 112) will be accepted. From owners.

"(U) (3). Underframe, etc.: Effective January 1 [fol. 5663] 1934, no car of all-wood underframe equipped with metal draft arms extending 24 inches or more beyond center line of body bolster (now defined as Class E-4 under Rule 112) will be accepted. From owners."

Effective date of Paragraph (U) (2) extended to January 1, 1933, on August 1, 1930.

Paragraph (U) (1) of Rule 3 amended effective January 1, 1930 to read (See Code revised 1929, page 19):

"Rule 3. (U) (1). Underframe, steel, having center sills with a minimum cross sectional area of 24 square inches between the draft back stops, required on all cars (other than tank cars) built new on or after January 1, 1927, or rebuilt on or after July 1, 1928. From owners. A tolerance of one square inch below minimum will be considered as meeting this requirement."

Note added following Paragraph (U) (1) effective January 1, 1931, to read (See Code revised 1930, page 20):

"Note—A steel underframe, as contemplated in this requirement, is an underframe not dependent upon truss rods for support, having steel center sills with a minimum cross sectional area of 24 square inches, steel body bolsters and steel cross bearers, suitably tied together. If end sills or side sills are used, they must also be of steel."

Effective date of Paragraph (U) (2) extended to January 1, 1934 on August 1, 1932.

Effective dates of Paragraphs (U) (2) and (U) (3) extended to January 1, 1935 on August 1, 1933.

Effective date of Paragraph (U) (3) extended to January 1, 1936 on August 1, 1934.

Note added following Paragraph (U) (1) effective August [fol. 5664] 1, 1934, to read (See Supplement No. 1 to Code revised 1933, page 5):

"Note—this requirement does not apply to the A. R. A. steel sheathed wood lined box car adopted as Standard in 1932, having center sills of 'Z' bar section design."

Effective date of Paragraph (U) (3) extended to January 1, 1937 on January 1, 1936.

Note following Paragraph (U) (1) amended effective August 1, 1935 to read (See Supplement No. 2 to Code revised 1934, page 5):

"Note—this requirement does not apply to cars built since June 1, 1932, having center sills of A. A. R. 'Z' bar section design of same type as used in A. A. R. steel sheathed wood lined box car adopted as Standard in 1932."

Rule amended August 1, 1934, by addition of new Paragraph (U) (4) to Rule 3, to read (See Supplement No. 1 to Code revised 1936, page 4):

"Rule 3. (U) (4) Underframe, etc.: Effective January 1, 1940, no car of wood underframe construction, having metal center sills, or having continuous metal drafts secured to wood center sills, will be accepted, un-

less such metal center sills or metal drafts have one top or bottom cover plate from bolster to bolster. From owners."

Effective date of Paragraph (U) (3) extended to April 1, 1937, on March 15, 1937.

Paragraph (U) (2) of Rule 3 amended effective January 1, 1939, to read (See Code revised 1938, page 24):

"Rule 3. (U) (2). Underframe, etc.: No car of all-wood construction will be accepted. In interchange."

Effective date of Paragraph (U) (4) extended to January 1, 1941 on August 1, 1939.

Paragraph (U) (3) of Rule 3 amended effective January [fol. 5665] 1, 1940 to read (See Code revised 1939, page 24):

"Rule 3. (U) (3). Underframe, etc.: No car of all-wood underframe equipped with metal draft arms extending 24 inches or more beyond center line of body bolster, will be accepted. In interchange."

Effective date of Paragraph (U) (4) extended to January 1, 1942 on August 1, 1940.

[fol. 5666] *Wheels*

The Interchange Rules effective September 1, 1911, contain no provisions with respect to types of wheels required on cars in interchange.

A new rule was added to the Code effective January 1, 1925, to read (See Code revised 1924, page 23):

"Rule 3. (N). A car will not be accepted in interchange if any of its wheels have the letter 'C' chipped out of the legent 'M. C. B.' or the letter 'R' chipped out of the legend 'A. R. A.'.

"(O) Cars will not be accepted from owner which have cast-iron wheels cast after January 1, 1925, of nominal weight of less than 650, 700 and 750 lbs.

"Note—The letters A. R. A. shall not be put upon any wheel which is of less weight than the standards of the A. R. A. or which is made to any specifications with requirements less than those prescribed in the A. R. A. Specifications for cast iron wheels."

A new rule was added to the Code effective January 1, 1935, to read (See Code revised 1934, page 119):

"Rule 70. (c) A. R. A. double plate shall not be substituted for A. R. A. single plate cast-iron wheels. (This does not apply in case of one single plate and one double plate wheel mounted on same axle.) Defect card is not required for such improper substitution of wheels. (See Rule 98, Section (c-5), for charges and credits.)"

A new rule was added to the Code effective January 1, 1937, to read (See Code revised 1936, pages 53 and 54):

"Rule 19. In making repairs to foreign cars, the following materials must not be used: Wheels which have been condemned by out-of-round Rule 73-A, if reclaimed by grinding."

[fol. 5666a] Rule 19 amended effective January 1, 1938, to read (See Code revised 1937, page 57):

"Rule 19. In making repairs to foreign cars, the following materials must not be used:

"Cast-iron wheels which have been condemned by out-of-round Rule 73-A, if reclaimed by grinding.

"Cast-iron wheels, double plate design, if cast prior to January 1, 1921."

220—S. P. Co., Yuma, Arizona to El Paso, Texas, June 18, 1938, train movements, actual and redispatched	5687	3210
222—S. P. Co., Pacific Lines, Yuma, Arizona, El Paso, Texas via Gila and Lordsburg, locomotive requirements for long train operation June 16-20, 1938	5688	3211
223—S. P. Co., Pacific Lines, locomotive assignment, weight and investment, Yuma, Arizona to El Paso, Texas (including the Douglas Line and excluding the Phoenix Line) June, 1938	5689	3212
224—S. P. Co., Pacific Lines, Tucson and Rio Grande Divisions, through freight-pool service. Additional cabooses and caboose investment required by Arizona Train Limit Law	5690	3213
225—S. P. Co., Pacific Lines, Yuma, Arizona, El Paso, Texas. Summary of investment charges and annual charges incident to adoption of long train operation	5691	3214
226—S. P. Co., Pacific Lines, redispatch study operating statistics Yuma, Arizona to El Paso, Texas, excluding Phoenix Line, period June and August, 1938	5692	3215
227—S. P. Co., Pacific Lines, arrival time at El Paso, Texas, of fruit blocks and manifest sections, actual operation compared with redispatched operation, with no restriction and using AC power and long sidings, months of June and August, 1938	5694	3217
228—S. P. Co., Pacific Lines, arrival time at Yuma, Arizona of "SSW" and "GBW" westward manifest trains, actual operation compared with redispatched operation, with no restriction and using AC power and long sidings, months of June and August, 1938	5700	3223
229—S. P. Co., Pacific Lines, redispatch study wage data, Yuma, Arizona to El Paso, Texas, for period June and Aug. 1938	5704	3227
230—S. P. Co., Pacific Lines, Los Angeles, Calif. to El Paso, Texas, passenger redispatch study for year 1938. Statistics of operation of second and extra sections of passenger trains caused by observance of Arizona 14 car law	5705	3228

Record from Superior Court of State of Arizona in and for County of Pima—Continued
Statement of evidence—Continued
Defendant's exhibits—Continued

	Original	Print
231—S. P. Co., Pacific Lines, Los Angeles, Calif., to El Paso, Tex., saving in passenger train service and costs account discontinuance of 14 car limit of passenger trains in Arizona, year 1938	5706	3229
232—S. P. Co., Pacific Lines, passenger redispatch study, year 1938, Los Angeles, California to El Paso, Tex., extra-territorial effect of Arizona Train Limit Law between Los Angeles, California and Yuma, Arizona, and Arizona New Mexico State Line and El Paso, Texas	5707	3230
233—S. P. Co., Pacific Lines, redispatch study-operating statistics Tucson-Phoenix, month of December 1938	5708	3230A
234—S. P. Co., Pacific Lines, main line ft. trains of various lengths operated between Yuma, Arizona and El Paso, Texas via Gila, Ariz., and Lordsburg, N. M., and via Douglas, Arizona, over south line during period April 4–30, 1940, incl., actual operation compared with redispatched operation, observing 70 car restriction and using present power and short sidings	5709	3231
235—S. P. Co., Relative train lengths, Calif.-Ariz.-New Mexico-Texas. Through and local freight trains operating via Yuma, Gila, Tucson, Lordsburg and El Paso based on redispatching study of April, 1940, observing 70 car restriction and using present power and short sidings	5710	3232
236—S. P. Co., Pacific Lines, redispatch study operating statistics, Yuma, Arizona to El Paso, Tex., for period April 4–30, 1940, actual operation compared with redispatched operation observing 70 car restriction and using present power and short sidings	5711	3233
237—S. P. Co., Pacific Lines, arrival time at El Paso, Texas, of fruit blocks and manifest sections, actual operation compared with redispatched operation, observing 70 car restriction and using present power and short sidings, April 4 to May 1, inclusive, 1940	5713	3235

Record from Superior Court of State of Arizona in and for County of Pima—Continued
Statement of evidence—Continued
Defendant's exhibits—Continued

	Original	Print
238—S. P. Co., Pacific Lines, arrival time at Yuma, Arizona of "SSW" and "GBW" westward manifest trains, actual operation compared with redispatched operation, observing 70 car restriction and using present power and short sidings	5718	3240
239—S. P. Co., Pacific Lines, redispatch study wage data, Yuma, Arizona to El Paso, Texas, for period April 4-30, 1940, actual operation compared with redispatched operation observing 70 car restriction and using present power and short sidings	5721	3243
240—S. P. Co., Pacific Lines, main line frt. trains of various lengths operated bet. Yuma, Ariz. and El Paso, Tex. via Gila, Ariz., and Lordsburg, N. M., and via Douglas, Ariz. over South Line, during Apr. 4-30, 1940, incl., actual operation compared with redispatched, with no restrictions and using AC power and long sidings	5722	3244
241—S. P. Co., Pacific Lines, relative train lengths, Calif.-Ariz.-New Mexico-Texas. Through and local freight trains operating via Yuma, Gila, Tucson, Lordsburg and El Paso, based on redispatching study of April, 1940, with no 70 car restriction and using AC power and long Sidings	5723	3245
242—S. P. Co., Pacific Lines, redispatch study-operating statistics, Yuma, Arizona to El Paso, Texas for period April 4-30, 1940, actual operation compared with redispatched operation, with no restriction and using AC power and long sidings	5724	3246
243—S. P. Co., Pacific Lines, arrival time at El Paso, Texas of fruit blocks and manifest sections, April 4th to May 1st, inclusive, 1940, Redispatched AC power	5726	3248
244—S. P. Co., Pacific Lines, arrival time at Yuma, Arizona of "SSW" and "GBW" westward manifest trains, actual operation compared with redispatched operation, with no restriction and using AC power and long sidings, month of April, 1940	5730	3252
245—S. P. Co., Pacific Lines, redispatch study wage data, Yuma, Ariz., to El Paso, Tex., for period April 4-30, 1940, actual operation compared with redispatched operation with no restriction and using AC power and long sidings	5732	3254

Record from Superior Court of State of Arizona in and for County of Pima—Continued
Statement of evidence—Continued
Defendant's exhibits—Continued

	Original	Print
246—S. P. Co., Pacific Lines, State of Arizona statistics in connection with passenger trains exceeding 14 cars in length operated during March and April, 1940	5733	3255
247—Southern Pacific Co., Pacific Lines, freight cars equipped with friction draft gear January 1, 1941	5734	3256
248—Total road mileage as of Dec. 31, 1939 and freight train car miles and revenue passenger miles operated during the year 1939, Class I railroads of U. S. and of certain railroads concerning which individual witnesses have heretofore testified on the subject of operating costs	5735	3257
249—S. P. Co., Pacific Lines, Comparisons between Tucson Div., Pacific Lines, and Salt Lake Div., showing trends in freight train and locomotive loading, and effect on fuel consumption	5736	3258
250—S. P. Co., Pacific Lines, Yuma, Ariz., to Lordsburg, N. M., Fuel consumption comparisons and estimated economies resulting from the adoption of long train operation	5740	3262
251—S. P. Co., Pacific Lines, Lordsburg, N. M., To El Paso, Tex., fuel consumption comparisons and estimated economies resulting from adoption of long train operation	5741	3263
252—S. P. Co., Pacific Lines, Summary of annual savings and annual increased costs in freight and passenger service between Los Angeles, Calif. and El Paso, Tex., following removal of restrictions of Arizona Train Limit Law, Year 1938	5742	3264
253—S. P. Co., Pacific Lines, Redispatch study, June and August, 1938, extra territorial effect of Arizona Train Limit Law between Ariz.-New Mexico State Line and El Paso, Texas	5743	3265
254—S. P. Co., Pacific Lines, Locomotive repair cost data for use in redispatch studies	5744	3266
255—S. P. Co., Pacific Lines, Redispatch study, locomotive repairs, Yuma to El Paso, for period April 4-30, 1940, Actual operation compared with redispatched operation, observing 70 car restriction and using present power and short sidings	5745	3267

Record from Superior Court of State of Arizona in and for County of Pima—Continued
Statement of evidence—Continued
Defendant's exhibits—Continued

Annual Report to the Interstate Commerce Commission — Report for the Year ended December 31, 1939

641. REVENUE FREIGHT CARRIED DURING THE YEAR†

Give the particulars asked concerning the commodities carried on the respondent's road during the year, the revenue from which is included in account No. [illegible] "Freight" revenue, classifying them in accordance with the Interstate Commerce Commission's Order of November 22, 1927, in the Manual of Commodity Statistics, effective on January 1, 1928, as amended by Order of December 14, 1938.

Classes 10-1 [illegible] include carload traffic only, all L. C. L. traffic being included in class [illegible].

Information as to tons, cars, and revenue of forwarder traffic should be reported against commodity class designation [illegible] unless clerical labor, class 701-A may be reported against forwarding companies or their subsidiaries [illegible] strictly [illegible] originate not less than approximately 80 percent of [illegible] respondent's line. The term "Forwarder traffic" [illegible] consigned by or to a forwarder, i. e., a company, firm, or individual recognized as engaged in the business of collecting and accumulating less-than-carload shipments into consolidated carloads without an ownership interest in the property so handled.

A "carload" for the purpose of this report should consist of a shipment of not less than 10,000 pounds of one commodity from one consignor to one consignee. Where mixed carload ratings are provided in classifications or tariffs, a mixed carload should be treated as a carload within the meaning of this paragraph, provided such shipment is from one consignor to one consignee at one destination, or in the case of shipments upon which stop-overs are permitted, from one consignor to two or more consignees, each at a different destination; and provided the shipment is waybilled at, and the charges are collected upon, the basis of the carload rate applicable. In such cases the shipment should be treated as a carload of that commodity which forms the major portion of the shipment in weight.

641. REVENUE FREIGHT CARRIED DURING THE YEAR†—Continued

In stating the number of tons received from connecting carriers, all shipments should be included that, so far as apparent from the information on the waybills or abstracts of waybills, have been received from connecting rail carriers either directly or indirectly. Shipments from boat lines should also be included when identified as having had previous rail transportation by United States rail carriers or as moving on joint through bills of lading by coastwise water carriers and railways.

Tonnage originating on switching roads connecting directly or indirectly with respondent's line should be regarded as tonnage originated by respondent.

Import traffic and traffic from outlying possessions of the United States received from water carriers should be regarded as originating at the port of entry.

All other tonnage should be treated as originating on line, including finished products from transit points.

The terms "delivered to connecting carriers" and "received from connecting carriers" as used in "Freight revenue" means reporting carrier's freight revenue without adjustment for absorptions or corrections.

In the note on page 518 show the aggregate amount of charges for protective services to perishable freight (without segregation of any portion thereof credited to account No. 101, Freight revenue) and the name of each rail carrier on whose rails protective service to perishable freight was performed for which the charges are credited, will report the amount of charges for such services. Tariff charges for specific services performed in transit, or at destination, which are not included in the line haul (standard) charges from the point at which the commodity is first applicable, and which are collected from the consignee or consignor should be reported by the carrier to which such

ing at the port

line, including

The terms "delivered to connecting carriers" and "terminating on line" should be understood in a manner consistent with the above definitions of "received from connecting carriers" and "originating on line."

"Freight revenue" means reporting carrier's gross freight revenue without adjustment for absorptions or corrections.

In the note on page 518 show the aggregate of the gross charges for protective services to perishable freight (without deduction for any proportion thereof credited to account No. 101, "Freight"). The carrier on whose rails protective service to perishable freight originates, or to which the charges are credited, will report the gross tariff charges for such services. Tariff charges for specific services performed at origin, in transit, or at destination, which are not included in the established (standard) charges from the point at which the protective service was first applicable, and which are collected from shippers or consignees, should be reported by the carrier to which such charges accrue.

with the Interstate Commerce Commission's Order of November 22, 1927, in the Matter of Freight Commodity Statistics, effective on January 1, 1928, as amended by order of December 14, 1928.

Classes 10 to 701 should include carload traffic only, all L. C. L. traffic being included in class 710.

Information as to carloads, tons, and revenue of forwarder traffic included in class 701 should be reported against commodity class designated 701-A. To avoid undue clerical labor, class 701-A may be restricted to the principal forwarding companies or their subsidiaries originating in the aggregate not less than approximately 80 percent of such traffic handled on respondent's line. The term "Forwarder traffic" means freight traffic consigned by or to a forwarder, i. e., a company,

A "carload" for the purpose of this report should consist of a shipment of not less than 10,000 pounds of one commodity from one consignor to one consignee. Where mixed carload ratings are provided in classifications or tariffs, a mixed carload should be treated as a carload within the meaning of this paragraph, provided such shipment is from one consignor to one consignee at one destination, or in the case of shipments upon which stop-overs are permitted, from one consignor to two or more consignees, each at a different destination; and provided the shipment is waybilled as, and the charges are collected upon, the basis of the carload rate applicable. In such cases the shipment should be treated as a carload of that commodity which forms the major portion of the shipment in weight.

† Not required from switching and terminal companies.

Tonnage originating on switching roads connecting directly or indirectly with respondent's line should be regarded as tonnage originated by respondent.

Import traffic and traffic from outlying possessions of the United States received from water carriers should be regarded as originating at the port of entry.

All other tonnage should be treated as originating on line, including finished products from transit points.

without adjustment for absorptions or correcti

In the note on page 518 show the aggregat protective services to perishable freight (witho portion thereof credited to account No. 101, on whose rails protective service to perishabl which the charges are credited, will report t such services. ing at the port

line, including

tions of "received from connecting carriers" and "originating on line."

"Freight revenue" means reporting carrier's gross freight revenue without adjustment for absorptions or corrections.

In the note on page 518 show the aggregate of the gross charges for protective services to perishable freight (without deduction for any proportion thereof credited to account No. 101, "Freight"). The carrier on whose rails protective service to perishable freight originates, or to which the charges are credited, will report the gross tariff charges for such services. Tariff charges for specific services performed at origin, in transit, or at destination, which are not included in the established (standard) charges from the point at which the protective service was first applicable, and which are collected from shippers or consignees, should be reported by the carrier to which such charges accrue.

941. REVENUE FREIGHT CARRIED DURING THE YEAR—WITHIN THE STATE*

Give the particulars called for concerning the commodities carried on the respondent's road during the year, the revenue from which is includible in account No. 101, "Freight", classifying them in accordance with the Interstate Commerce Commission's Order in the Matter of Freight Commodity Statistics, effective January 1, 1938, as amended by order of December 14, 1938.

In stating the number of tons received from connecting carriers, include all shipments that, so far as apparent from the information on the waybills or abstracts of waybills, have been received from connecting rail carriers either directly or indirectly. Shipments from boat lines should also be included when identified as having had previous rail transportation by United States rail carriers or as moving on joint through bills of lading by coastwise water carriers and railways.

Tonnage originating on switching roads connecting directly or indirectly with respondent's line should be regarded as tonnage originated by respondent. Import traffic and traffic from outlying possessions of the United States received from water carriers should be regarded as originating at the port of entry. All other tonnage should be treated as originating on line, including finished products from transit points.

If the application of these instructions results in any marked deviation from the respondent's past practice, that fact should be stated in a footnote in order that proper allowance can be made in interpreting the statistics.

Particulars for Classes Nos. 10 to 701 should include carload traffic only, all less than carload traffic being included in Class No. 710.

Information as to carloads and tons of forwarder traffic included in Class 701 should be reported against commodity class designated 701-A. To avoid undue clerical labor, Class 701-A may be restricted to the principal forwarding companies or their subsidiaries originating in the aggregate not less than approximately 80 percent of such traffic handled on respondent's line. The term "Forwarder traffic" is defined in the third paragraph of instructions for Schedule No. 541 on page No. 512.

Class No.	Commodity (a)	Revenue Freight Originating on Respondent's Road Within the State: Number of carloads (b)	Number of tons (2,000 lb.) 941. REVENUE FREIGHT CARRIED DURING THE YEAR—WITHIN THE STATE*

Give the particulars called for concerning the commodities carried on the respondent's road during the year, the revenue from which is includible in account No. 101, "Freight", classifying them in accordance with the Interstate Commerce Commission's Order in the Matter of Freight Commodity Statistics, effective January 1, 1928, as amended by order of December 14, 1938.

In stating the number of tons received from connecting carriers, include all shipments that, so far as apparent from the information on the waybills or abstracts of waybills, have been received from connecting rail carriers either directly or indirectly. Shipments from boat lines should also be included when identified as having had previous rail transportation by United States rail carriers or as moving on joint through bills of lading by coastwise water carriers and railways.

Tonnage originating on switching roads connecting directly or indirectly with respondent's line should be regarded as tonnage originated by respondent. Import traffic and traffic from outlying possessions of the United States received from water carriers should be regarded as originating at the port of entry. All other tonnage should be treated as originating on line, including finished products from transit points.

If the application of these instructions results in any marked deviation from the respondent's past practice, that fact should be stated in a footnote in order that proper allowance can be made in interpreting the statistics.

Particulars for Classes Nos. 10 to 701 should include carload traffic only, all less than carload traffic being included in Class No. 710.

Information as to carloads and tons of forwarder traffic included in Class 701 should be reported against commodity class designated 701-A. To avoid undue clerical labor, Class 701-A may be restricted to the principal forwarding companies or their subsidiaries originating in the aggregate not less than approximately 80 percent of such traffic handled on respondent's line. The term "Forwarder traffic" is defined in the third paragraph of instructions for schedule No. 541 on page No. 513.

941. REVENUE FREIGHT CARRIED DURING THE YEAR—WITHIN THE STATE*

Give the particulars called for concerning the commodities carried on the respondent's road during the year, the revenue from which is includible in account No. 101, "Freight", classifying them in accordance with the Interstate Commerce Commission's Order in the Matter of Freight Commodity Statistics, effective January 1, 1928, as amended by order of December 14, 1939.

In stating the number of tons received from connecting carriers, include all shipments that, so far as apparent from the information on the waybills or abstracts of waybills, have been received from connecting rail carriers either directly or indirectly. Shipments from boat lines should also be included when identified as having had previous rail transportation by United States rail carriers or as moving on joint through bills of lading by connecting water carriers and railways.

Tonnage originating on switching roads connecting directly or indirectly with respondent's line should be regarded as tonnage originated by respondent. Import traffic and traffic from outlying possessions of the United States received from water carriers should be regarded as originating at the port of entry. All other tonnage should be treated as originating on line, including finished products from transit points.

If the application of these instructions results in any marked deviation from the respondent's past practice, that fact should be stated in a footnote in order that proper allowance can be made in interpreting the statistics.

Particulars for Classes Nos. 10 to 701 should include carload traffic only, all less than carload traffic being included in Class No. 710.

Information as to carloads and tons of forwarder traffic included in Class 701 should be reported against commodity class designated 701-A. To avoid undue clerical labor, Class 701-A may be restricted to the principal forwarding companies or their subsidiaries originating in the aggregate not less than approximately 90 percent of such traffic handled on respondent's line. The term "Forwarder traffic" is defined in the third paragraph of instructions for schedule No. 941 on page No. 812.

(1) = INCREASE

5692

3215

(1) YUMA - GILA DISTRICT: Decrease of 618 engine water cars and 25 deadhead cabooses, and increase of 70 loads which moved via Phoenix Line in actual operation and via Gila Line in redispatched operation, produces net decrease of 567 cars.

(2) GILA - TUCSON DISTRICT: Decrease of 328 engine water cars and 34 deadhead cabooses, and increase of 70 loads which moved via Phoenix Line in actual operation and via Gila Line in redispatched operation, produces net decrease of 290 cars.

(3) TUCSON-LORDSBURG DISTRICT: Decrease of 23 deadhead cabooses, 231 east empties and 642 west empties, which moved North Line in actual operation but South Line in redispatched operation, offset by an increase of 155 west empties which reached Tucson on the redispatch but which were left at Bowie on the actual, produces a net decrease of 741 cars.

(4) LORDSBURG-EL PASO DISTRICT: Decrease of 231 east empties and 642 west empties which moved North Line in actual operation but South Line in redispatched, offset by an increase of 17 deadhead cabooses in redispatched operation, produces net decrease of 856 cars.

(5) EL PASO - STRAUSS DISTRICT: Average cars per train computed for Strauss turnarounds in westward direction only (two trains in actual, and 28 trains in redispatch) as eastward trains were without cars.

(6) TOTAL NORTH LINE: Average cars per train computed, omitting El Paso-Strauss turnaround trains and cars handled by those trains.

(7) TUCSON - DOUGLAS DISTRICT: Increase of 231 east empties, and 642 west empties which moved North Line in actual operation but South Line in redispatched, plus 20 westward empties which reached Tucson on the redispatch but which were left at Douglas on the actual, plus 25 west empties which reached Tucson on the redispatch, but which were left at Rodeo on the actual in order to comply with the law, produces total increase of 918 cars.

(8) DOUGLAS - BISBEE JCT. (Turnaround trains only): Increase of 231 empties handled Douglas to Bisbee Jct., by redispatched turnaround trains to avoid helping redispatched through westward trains Douglas to Bisbee Jct.

(9) DOUGLAS - EL PASO DISTRICT: Increase of 231 east empties and 642 west empties which moved North Line in actual operation but South Line in redispatched, plus 25 westward empties which reached Douglas (and Tucson) on the redispatch, but which were left at Rodeo on the actual in order to comply with the law, produces a total increase of 898 cars.

(10) TOTAL SOUTH LINE: Average cars per train computed omitting Douglas-Bisbee Jct., turnaround trains and cars handled by those trains.

(11) TOTAL NORTH AND SOUTH LINES: Average cars per train computed omitting Strauss and Douglas-Bisbee Jct., turnaround trains and cars handled by those trains:-

ACTUAL:	4 Strauss turns with		200 cars
	52 Douglas-Bisbee Jct. turns		2,851 cars
	56 trains omitted with		3,051 cars
REDISPATCH:	56 Strauss turns with		2,800 cars
	52 Douglas-Bisbee Jct. turns		3,082 cars
	108 trains omitted with		5,882 cars

Defendant's Exhibit No. 228 (Witness Sines)
Jan. 30, 1941

SOUTHERN PACIFIC COMPANY
(Pacific Lines)

ARRIVAL TIME AT YUMA, ARIZONA
OF "SSW" AND "GBW" WESTWARD MANIFEST TRAINS -
ACTUAL OPERATION COMPARED WITH REDISPATCHED
OPERATION, WITH NO RESTRICTION AND USING AC
POWER AND LONG SIDINGS.

MONTHS OF JUNE AND AUGUST, 1938

SUMMARY

JUNE, 1938

(1) NUMBER OF TRAINS ARRIVING YUMA - ACTUAL,	58
(2) NUMBER OF TRAINS ARRIVING YUMA - REDISPATCHED,	57
(3) NUMBER OF BLOCKS AND MANIFEST SECTIONS INVOLVED,	76
(4) NUMBER OF REDISPATCHED BLOCKS ARRIVING YUMA -	
(a) AT SAME TIME AS ACTUAL BLOCKS,	34
(b) IN ADVANCE OF ACTUAL BLOCKS,	26
(c) LATER THAN ACTUAL BLOCKS,	16
(5) TOTAL TIME -	
(a) IN ADVANCE OF ACTUAL,	11 HOURS 5 MINUTES
(b) LATER THAN ACTUAL,	5 HOURS 15 MINUTES
(6) AVERAGE TIME OF 26 BLOCKS IN ADVANCE OF ACTUAL	26 MINUTES
(7) AVERAGE TIME OF 16 BLOCKS LATER THAN ACTUAL,	20 MINUTES

AUGUST, 1938

(1) NUMBER OF TRAINS ARRIVING YUMA - ACTUAL,	64
(2) NUMBER OF TRAINS ARRIVING YUMA - REDISPATCHED,	63
(3) NUMBER OF BLOCKS AND MANIFEST SECTIONS INVOLVED,	75
(4) NUMBER OF REDISPATCHED BLOCKS ARRIVING YUMA -	
(a) AT SAME TIME AS ACTUAL BLOCKS,	36
(b) IN ADVANCE OF ACTUAL BLOCKS,	24
(c) LATER THAN ACTUAL BLOCKS,	15
(5) TOTAL TIME -	
(a) IN ADVANCE OF ACTUAL,	11 HOURS 10 MINUTES
(b) LATER THAN ACTUAL	6 HOURS
(6) AVERAGE TIME OF 24 BLOCKS IN ADVANCE OF ACTUAL,	28 MINUTES
(7) AVERAGE TIME OF 16 BLOCKS LATER THAN ACTUAL,	24 MINUTES

SSW = SUNSET WEST MANIFEST

GBW = GOLD BALL WEST MANIFEST

Partial offset to saving of 545 train miles by elimination of second No. 5 from Tucson, Arizona to Los Angeles, California on December 19, 1938, would be the addition of 150 motor car miles Phoenix to Picacho and return to handle passengers moving on train No. 43 via Gila instead of second No. 5 via Phoenix. 0- 150 motor car miles

0- indicates offset

PASSENGER REDISPATCH STUDY - YEAR 1938
LOS ANGELES, CALIFORNIA TO EL PASO, TEXAS
EXTRA-TERRITORIAL EFFECT OF ARIZONA TRAIN LIMIT LAW
BETWEEN LOS ANGELES, CALIFORNIA AND YUMA, ARIZONA,
AND ARIZONA-NEW MEXICO STATE LINE AND EL PASO, TEXAS

DISTRICT		
1 - Los Angeles, California to Yuma, Arizona		
Refer to Exhibit No		
Train miles saved	1,506	
Estimated monetary saving		$1,172
Helper locomotive miles saved	1,140	
Estimated monetary saving		$ 376
2 - Arizona-New Mexico State Line to El Paso, Texas		
Refer to Exhibits No. 230 and 231		
Train miles saved	2,396	
Estimated monetary saving 2,396 train miles times $0.7392 (*) equals		$1,771
3 - TOTAL		$3,319

(*) - Exhibit No. 231 shows saving of $9,397 Yuma, Arizona to El Paso, Texas and 12,712 train miles eliminated; equals $0.7392 per train mile saved.

D - Indicates Decrease

(1) Yuma - Gila District: Increase 80 additional engine water cars east, 80 additional deadhead caboose, 81 additional engine water cars west, and 80 west empties which moved via Phoenix Line in actual operation, and via Gila line in redispatched operation, total 156 cars.

(2) Gila - Tucson District: Increase 12 additional deadhead caboose east, 81 additional engine water cars west, and 80 west empties which moved via Phoenix line in actual operation and via Gila line in redispatched operation, total 173 cars.

(3) Tucson - Lordsburg District: Increase 14 additional deadhead caboose and 57 west empties which moved via south line in actual operation and via north line in redispatched operation, total 71 cars.

(4) Lordsburg-El Paso District: Increase 57 west empties which moved via south line in actual operation and via north line in redispatched operation.

(5) Increase - sum of (1), (2), (3) and (4) in column (c) on sheet 1.

(6) Tucson-Douglas (Through trains only): Decrease account 57 west empties which moved via south line in in actual and via north line in redispatched operation, and 8 loads, 4 empties, which moved on eastward Bisbee Jct. turnaround train in actual operation and on eastward through train in redispatched operation, produce net difference of 49 cars.

(7) Douglas-Bisbee District (Turnaround trains only): Decrease account 33 west empties from Douglas and 20 west empties from Calumet which were moved on turnaround trains in actual operation, and by through trains in redispatched operation, and 8 loads, 4 empties which were moved by an eastward turnaround train in actual operation and by a through eastward train in redispatched operation, total 65 cars.

(8) Douglas-El Paso District: Account 57 west empties which moved via south line in actual operation and north line in redispatched operation.

(9) Average cars per train computed for total south line omitting 48 Douglas - Bisbee Jct. turnaround trains and cars handled by these trains. (Actual 3,171 cars; redispatched 3,106 cars.)

(10) Average cars per train computed for total north and south lines omitting 48 Douglas - Bisbee Jct. turnaround trains and cars handled by these trains. (Actual 3,171 cars, redispatched 3,106 cars.)

Defendant's Exhibit No. 238 (Witness Sines)
Jan. 30, 1941

SOUTHERN PACIFIC COMPANY
(Pacific Lines)

ARRIVAL TIME AT YUMA, ARIZONA
OF "SSW" AND "GBW" WESTWARD MANIFEST TRAINS
ACTUAL OPERATION COMPARED WITH REDISPATCHED
OPERATION, OBSERVING 70-CAR RESTRICTION AND
USING PRESENT POWER AND SHORT SIDINGS.

MONTH OF APRIL, 1940

(1)	NUMBER OF TRAINS ARRIVING YUMA - ACTUAL,	89
(2)	NUMBER OF TRAINS ARRIVING YUMA - REDISPATCHED,	89
(3)	NUMBER OF BLOCKS AND MANIFSST SECTIONS INVOLVED,	96
(4)	NUMBER OF REDISPATCHED BLOCKS ARRIVING YUMA -	
	(a) AT SAME TIME AS ACTUAL BLOCKS,	82
	(b) IN ADVANCE OF ACTUAL BLOCKS,	8
	(c) LATER THAN ACTUAL BLOCKS,	6
(5)	TOTAL TIME -	
	(a) IN ADVANCE OF ACTUAL,	4 HOURS 10 MINUTES
	(b) LATER THAN ACTUAL,	1 HOUR 15 MINUTES
(6)	AVERAGE TIME OF 8 BLOCKS IN ADVANCE OF ACTUAL,	31 MINUTES
(7)	AVERAGE TIME OF 6 BLOCKS LATER THAN ACTUAL,	13 MINUTES

SSW = SUNSET WEST MANIFEST

GBW = GOLD BALL WEST MANIFEST

I - Indicates Increase

(1) Yuma - Gila District: Decrease of 156 engine water cars east, and 167 west; increase of four deadhead cabooses east. Total decrease of 319 cars on the redispatched trains.

(2) Gila - Tucson District: Decrease of 112 engine water cars and 4 deadhead cabooses.

(3) Tucson-Lordsburg District: Decrease of 14 deadhead cabooses east and 2 west. Total decrease of 16 cars on the redispatched trains.

(4) Lordsburg-El Paso District: Increase of 2 deadhead cabooses east, and 1 west. Total increase of 3 cars on the redispatched trains.

(5) El Paso - Strauss: Average cars per train (redispatch) computed for Strauss turnarounds by omitting 12 trains in the eastward direction as these trains handled none of the 1,057 cars, (all of these cars moved westward).

(6) Average cars per train (redispatch) computed omitting 24 El Paso - Strauss turnaround trains and 1,057 cars handled by these trains.

(7) Average cars per train computed for total south line omitting 48 Douglas - Bisbee Jct. turnaround trains and 3,171 cars handled by these trains.

(8) Average cars per train for total north and south lines omitting Strauss, and Douglas - Bisbee Jct., turnaround trains and cars handled by these trains.

ACTUAL	No Strauss turnarounds	
	48 Douglas-Bisbee Jct. turnarounds with	3,171 cars
	Total 48 trains omitted	3,171 cars omitted
REDISPATCH	24 Strauss turnarounds with	1,057 cars
	48 Douglas-Bisbee Jct. turnarounds with	3,171 cars
	Total 72 trains omitted	4,228 cars omitted

Defendant's Exhibit No. 243 (Witness Sines)
Jan. 30, 1941

[redacted]
(Public Line)

ACTUAL TIME AT EL PASO, TEXAS
OF FIRST BLOCKS AND HAULOFF SECTIONS

APRIL 4TH TO MAY 3RD, INCLUSIVE, 1940

EASTBOUND AS POSTED

SUMMARY

(1)	NUMBER OF TRAINS ARRIVING EL PASO - ACTUAL	240
(2)	NUMBER OF TRAINS ARRIVING EL PASO - SCHEDULED	232
(3)	NUMBER OF BLOCKS AND HAULOFF SECTIONS INVOLVED - ACTUAL	205
(4)	NUMBER OF BLOCKS AND HAULOFF SECTIONS INVOLVED - SCHEDULED	179
(5)	NUMBER OF SCHEDULED BLOCKS ARRIVING EL PASO -	
	(a) AT SAME TIME AS ACTUAL BLOCKS	33
	(b) IN ADVANCE OF ACTUAL BLOCKS	105
	(c) LATER THAN ACTUAL BLOCKS	40
(6)	TOTAL TIME -	
	(a) IN ADVANCE OF ACTUAL	77 HRS. 15 MINS.
	(b) LATER THAN ACTUAL	18 HRS. 00 MINS.
(7)	AVERAGE TIME OF 105 BLOCKS IN ADVANCE OF ACTUAL (MINUTES)	96
(8)	AVERAGE TIME OF 40 BLOCKS LATER THAN ACTUAL (MINUTES)	48

A = ARIZONA INTERMEDIATE BLOCK
C = COLTON INTERMEDIATE BLOCK
T = TUCSON INTERMEDIATE BLOCK
CT = COLTON OVERLAP ON TUCSON BLOCK OR COLTON SUPERIOR
CTA = COLTON OVERLAP OVERLAP ON SECOND TUCSON BLOCK OR COLTON SUPERIOR
H = HAULOFF INTERMEDIATE
EBS = EASTBOUND SAN BERNARDINO

INTERSTATE COMMERCE COMMISSION RULES GOVERNING MONTHLY REPORTS OF RAILWAY ACCIDENTS
EFFECTIVE ON JANUARY 1ST, 1922

INTERSTATE COMMERCE COMMISSION
BUREAU OF STATISTICS

RULES
GOVERNING
MONTHLY REPORTS
OF
RAILWAY ACCIDENTS

1922 REVISION

(With modifying orders dated September 21, 1932, December 17, 1932, and January 14, 1936)

UNITED STATES
GOVERNMENT PRINTING OFFICE
WASHINGTON: 1939

ORDER.

At a General Session of the INTERSTATE COMMERCE COMMISSION, held at its office in Washington, D. C., on the 31st day of December, A. D. 1921.

Ordered, That the annexed draft of rules entitled "Rules governing monthly reports of railway accidents" be, and they hereby are, approved to become effective as of January 1, 1922, and that all common carriers within the scope of the Accident Reports Act, approved May 6, 1910, be governed by the said rules in the preparation and submission of their monthly reports of accidents occurring on or after January 1, 1922.

It is further ordered, That the order of this Commission issued under date of October 11, 1918, in the matter of monthly reports of railway accidents be, and it is hereby, annulled except in its application to reports of accidents occurring before January 1, 1922.

By the Commission:

[SEAL.] GEORGE B. MCGINTY,
Secretary.

5

5750

RULES GOVERNING MONTHLY REPORTS OF RAILWAY ACCIDENTS.

GENERAL INSTRUCTIONS.

1. **Operation of a Railway.**—The term *operation of a railway* is used herein to include—

The operation of trains, locomotives, and cars and the facilities incidental to their operation, such as tracks, railway stations, depots, freight houses, warehouses, shops, coaling stations, wharves, and ferries used as an adjunct of train-service, etc., when such operation is performed under the supervision of the carrier by its employees.

The maintenance of equipment, roadway, track, buildings, and other parts of railway plant, when such maintenance is performed under the supervision of the carrier by its employees.

The construction of additions, betterments, and new lines when performed under the supervision of the carrier by its regular forces of employees ordinarily engaged in the construction, operation, or maintenance of existing lines.

2. **Accidents to be Reported.**—A *reportable accident* is an accident arising from the operation of a railway that results in one or more of the following circumstances:

(*a*) Damage to railway property amounting to more than $150, including the expense of clearing wreck, but not damage to or loss of freight or baggage, animals, or property of noncarriers on or adjacent to right of way.

(*b*) Death of a person.

(*c*) Injury to an employee sufficient to incapacitate him from performing his ordinary duties for more than three days in the aggregate during the 10 days immediately following the accident. This rule applies to employees on duty, and to those classed as not on duty, but does not apply to employees classed as passengers or trespassers.

(*d*) Injury to a person other than an employee if the injury is sufficient, in the opinion of the reporting officer, to incapacitate the injured person from following his customary vocation or mode of life for a period of more than one day. This rule applies also to employees classed as passengers or trespassers.

3. **Accidents Not to be Reported.**—No accident is to be reported unless it arises from the operation of a railway and causes either a reportable casualty or damage exceeding $150 to railway property (including the cost of clearing wreck); nor are reports of accidents of such nature as the following required: Casualties caused by frightened animals and injuries to persons jumping from vehicles not on railway property; casualties to persons other than employees on duty resulting from assaults by passengers and other persons not railway employees; casualties to employees received in personal encounters with other employees; cases of suicide in which death evidently was not caused by moving trains, locomotives, or cars; and cases of disability or death resulting from natural causes. Unless due to defective or moving railway equipment or negligence, mistake, or misconduct of railway employees, the following kinds of accident are likewise not reportable: Casualties to draymen and other persons, not railway employees, while loading or unloading freight at station and freight-house platforms or at or in cars; and casualties to contractors or their employees engaged in railway contract work.

4. **Doubtful Cases.**—Whenever any person declares that he has been injured in a railway accident and the carrier involved denies the allegation, the injury alleged, if of a reportable class, should be reported, but should be designated "claimed but not admitted by carrier," or otherwise, as may be appropriate. Any person found dead on or adjacent to the premises or right of way of a carrier should, unless excluded by the provisions of section 3, be reported by the carrier if the evidence or a coroner's verdict is in effect that such person's death resulted from the operation of its railway.

5. **Joint operations.**—For the purpose of accident classification, the term "joint operations" is intended to cover operations on terminal or other tracks used jointly or in common by two or more reporting carriers, or where the equipment of one carrier moves as its own train over the track of another carrier.

Locomotives, with or without crews, if loaned or leased by one carrier to another, are not thereby made subject to the rules relative to "joint operations."

Trains or locomotives of a nonreporting carrier which may become involved in reportable accidents on the line of a reporting carrier do not fall under the rules pertaining to "joint operations"; such accidents, however, should be included in the report of the reporting carrier.

If a reportable accident occurs on a private siding or track of like character, it should be reported by the carrier having possession of the locomotive concerned or employing the persons involved, but not as a joint-operation accident.

The question of responsibility among carriers for accidents classifiable under the rules applicable to joint operations is not to be considered in relation to the making of reports concerning them, but all carriers involved should make reports as respectively required.

For rules relative to reporting railway "crossing collisions," see section 8 (*e*) and (*f*).

5a. **Joint operations—Train accidents.**—Train accidents resulting in *total* damage in excess of $150 (including cost of clearing wreck), occurring on tracks used by two or more reporting carriers should be severally reported by the carrier or carriers whose *equipment* or *employees* are involved and the carrier whose superintendent is in immediate charge of the track on which the accident occurs. Each carrier concerned in such an accident should report the damage to its equipment and other items of expense as provided in the report blank and state (estimating, if unknown) the amount of damage sustained by the other carriers involved; the names of which should be respectively indicated before the items of damage.

If a reportable train accident, though occurring on jointly used track, involves only the equipment and employees of the carrier whose superintendent is in immediate charge of such track, the accident need be reported only by the carrier concerned.

Where two or more trains are involved, each carrier should report casualties to its passengers and employees and also to other persons on its train. Casualties to classes of persons not here mentioned should be appropriately reported by the carrier concerned.

5b. **Joint operations—Train-service accidents.**—Train-service accidents occurring on terminal or other tracks used jointly or in common by two or more reporting carriers involving employees on duty should be reported by the several carriers concerned. Casualties to other persons should be reported by the carrier whose equipment is involved.

5c. **Casualties to Railway Employees on Adjacent Track of Another Road.**—When a railway employee on duty is killed or injured on the adjacent track of another carrier, the accident should be reported by both carriers, whether or not a joint operation is involved.

CLASSIFICATION OF RAILWAY ACCIDENTS.

6. **Primary Groups and Their Definitions.**—Reportable railway accidents are divided into three primary groups:

Group I.—Train accidents.
Group II.—Train-service accidents.
Group III.—Nontrain accidents.

Group I.—Train Accidents.—This group covers accidents, with or without casualties, arising in connection with the operation or movement of trains, locomotives, or cars that result in damage to equipment or other railway property in excess of $150 (including cost of clearing wreck, in which should be included the local expense of transferring lading made necessary as the result of an accident, but not damage, if any, to the lading). (See Group I below.)

Group II.—Train-service Accidents.—This group covers accidents arising in connection with the operation or movement of trains, locomotives, or cars that result in casualties to persons, but not in damage to equipment or other railway property in excess of $150 (including cost of clearing wreck as indicated in the preceding paragraph). (See Group II, page 20.)

Group III.—Nontrain Accidents.—This group covers accidents that do not result directly from the operation or movement of trains, locomotives, or cars.

Accidents in connection with the operation of vessels are also considered nontrain accidents, and resulting casualties are reportable when the vessels are operated as an adjunct to train service. (See Group III, page 22.)

GROUP I.—TRAIN ACCIDENTS.

7. **Classification of Train Accidents.**—Train accidents should be classified under the following heads:

Collisions (Class C).
Derailments (Class D).
Locomotive-boiler accidents (Class B).
Other locomotive accidents or failures (not resulting in a collision, derailment, or boiler accident) (Class L).
Miscellaneous train accidents (Class M).

If a single accident is classifiable under two or more of the foregoing heads, it should be classified in accordance with its primary class.

8. **Collisions (Class C).**—A collision is a violent impact of a train, locomotive, or car with some other train, locomotive, or car while both are on rails. Accidents, however, in which cars, not in suitable condition to withstand common train usage, that, when coupled in trains, may be damaged through ordinary train movements, should be classified as miscellaneous train accidents, and not as collisions. (Accidents caused by trains, etc., striking hand cars, section motor cars, and like roadway machines, or bumping posts, are not classifiable as collisions, but otherwise according to circumstances.)

Reports of collisions, in addition to furnishing the information required by sections of these rules having general application, should describe briefly the method of operation in use for the track involved,

stating whether the block system was in use; and, if in use, whether manual, controlled manual, automatic, etc.

For collisions involving any question of train orders, the information should show whether they were on Form "19" or Form "31" (A. R. A. Standard Code of Train Rules).

In the case of a collision, the number of main tracks in use in the locality of the accident should be stated.

Collisions should be classified as follows:

(*a*) *Rear-end collisions.*—A rear-end collision is a collision in which the trains or locomotives involved are bound in the same direction on the same track.[1]

(*b*) *Head-on collisions.*—A head-on collision is a collision in which the trains or locomotives involved are bound in opposite directions on the same track.[1]

(*c*) *Broken-train collisions.*—A broken-train collision is a collision in which a moving *train* breaks into parts and a violent impact of two or more of the uncoupled parts of the same train occurs, or one or more of the parts collide with another train, locomotive, or car. Collisions in which the equipment involved is employed in a switching movement are not to be included in this class.

(*d*) *Side or raking collisions.*—This class does not include collisions of trains with cars classifiable under (*g*) or collisions of equipment employed in switching movements classifiable under (*h*). An accident caused by parts of equipment on one track coming in contact with equipment on a parallel track should not be classified as a collision, but as a miscellaneous train accident, unless a derailment occurs.

(*e*) *Crossing collisions at private railway crossings.*—The term "crossing collisions at private railway crossings" is used herein to mean collisions occurring at crossings or junctions on the carriers' right of way, involving trains, locomotives, or cars operated on the intersecting tracks not on public streets, highways, or other public property.[2]

(*f*) *Crossing collisions at public highway crossings.*—The term "crossing collisions at public highway crossings" is used herein to mean collisions occurring at railway grade crossings on public streets, highways, or other public property, involving trains, locomotives, or cars operated on the intersecting tracks. This class does not include accidents due to striking trolley cars, automobiles, or other vehicles, classifiable under sections 9 (*f*), 12 (*a*), or 13 (*h*).[2]

[1] The time-table or schedule direction should govern the classification of collisions in clauses (*a*) and (*b*) if at the time of the accident either of the trains or locomotives is at rest or if its incidental movement temporarily differs from its schedule direction.

[2] Crossing collisions covered by clauses (*e*) and (*f*) should be reported by each carrier affected. Items of damage and casualties to persons should be reported in the same manner as described in connection with "joint operations" (sections, sec. 6a and 6b, p. 35).

(*g*) *Collisions of trains with cars not in trains.*—This class does not include collisions of trains with cars, subject by train rules to the protection afforded to trains, which should be classified as (*a*), (*b*), (*c*), (*d*), (*e*), or (*f*), in accordance with the circumstances of the particular case.

(*h*) *Switching collisions.*—The term "switching collisions" is used herein to mean collisions occurring to equipment being switched, as in making or breaking up trains, shifting or setting out cars, etc., including accidents to locomotives involved in such service. A collision should not receive this classification when two or more locomotives, trains, or cuts of cars are involved unless both or all such units of equipment are employed in switching movements at the time of accident, but it should be classified as (*a*), (*b*), (*c*), (*d*), (*e*), (*f*), (*g*), or (*i*), in accordance with the circumstances of the particular case.

(*i*) *Collisions not elsewhere classifiable.*—This class includes collisions between light locomotives moving to or from roundhouse; also collisions between a locomotive and cars of a train or cut of cars occurring in recoupling the locomotive after it has been cut off to take water, for repairs, etc., but does not include collisions between locomotives and cars while engaged in switching movements as described in paragraph (*h*).

9. Derailments (Class D).—In reporting derailments the information required by provisions of these rules having general application should be furnished, and there should be indicated in particular, by initials and number, or name, both the equipment causing the derailment and the equipment derailed. If a derailment is due to the breaking of a rail, a Form R in addition to a Form T should be supplied. (See sec. 18, p. 23.)

Derailments should be classified as follows:

(*a*) *Derailments due to defects in or failures of power brake apparatus, hose, etc.*—This class covers derailments resulting from defects in or failures of power brakes or any apparatus or appurtenances connected therewith, including air hose and hose couplings, with the exceptions indicated in (*c*). (See sec. 5, p. 42, of code.)

(*b*) *Derailments due to defects in or failures of couplers.*—This class covers derailments resulting from defects in or failures of couplers and such of their mechanical parts as may be directly involved in the interlocking of two couplers, including, for example, the knuckle, knuckle pin, lock block, shank, etc., but not such apparatus as the coupler yoke, coupler or drawbar key, draft springs, friction plates, etc., or other parts back of the shank. (See sec. 7, p. 42, of code.)

(*c*) *Derailments due to other defects in or failures of locomotives or cars.*—This class covers derailments due to failures of locomo-

tives or cars, except those specifically provided for in classes (*a*) and (*b*), such as those resulting from broken or otherwise defective wheels (including cases in which wheels are broken as a result of defects in brake apparatus or other causes), tires, axles, journals, trucks, brake beams, brake rigging, draft gear (including coupler yoke, coupler or drawbar key, and other parts of draft rigging back of shank), side bearings, arch bars, car bodies, etc. (See secs. 1, 2, 3, 4, 6, 8, and 9, pp. 41, 42, and 43, of code.)

(*d*) *Derailments due to defects in track, bridges, switches, and signals, or other defects in roadway.*—This class covers derailments such as those resulting from broken rails, spread rails, soft track, defective ties, rough or irregular track, etc., that occur in the course of ordinary wear and weather conditions but does not include derailments due to such conditions as are outlined for class (*c*). (See secs. 1 to 6, pp. 43 and 44, of code.)

(*e*) *Derailments due to accidental obstructions or defects in track.*—This class covers derailments such as those due to weakening or destruction of bridges or other structures by fire; to animals, vehicles, etc., on track at places other than at public highway grade crossings; to landslides; to snow or ice on or in track; to floods; to washouts at culverts or other places; to coal, ballast, or parts of equipment or lading of another train falling on track or wedging in switch; and to other unforeseen happenings or obstructions of similar character. Parts of the equipment or lading of a train which, by falling on the track, cause a derailment of the same train, are not to be regarded as obstructions with relation to this class, but a derailment so caused should be properly assigned to class (*a*), (*b*), (*c*), or (*i*). (See items 4401 to 4411, sec. 4, p. 45, of code.)

(*f*) *Derailments due to obstructions at public highway crossings.*—This class covers accidents at public highway grade crossings due to trains, locomotives, or cars striking or being struck by trolley cars, automobiles, or other vehicles, or objects other than hand cars or other railway tools or material, which result in reportable derailments. State all material facts, including whether injured persons were pedestrians, occupants of trolley cars, automobiles, or other vehicles, etc.; the nature of protection, if any, afforded at the crossing at the time of an accident; that is, whether crossing gates, watchman, audible or visual signals (not stationary signs), etc.; the kind of vehicle or object struck and whether the view of the crossing was obscured by buildings, trees, cars, or other objects. (See also secs. 12 (*a*) and 13 (*h*).) (See items 4412 to 4422, sec. 4, p. 45, of code.)

(*g*) *Derailments due to negligence, mistake, or misconduct of trainmen or other employees.*—Derailments should not be reported in this class unless the direct or immediate cause was negligence, mistake, or

misconduct of railway employees, such as error in throwing switches, misunderstanding of or error in giving signals, failure of section men to protect when replacing rails, excessive speed in violation of instructions, etc. Derailments due to contributory negligence, such as those caused by the failure of inspectors or track walkers to discover defects in equipment or track, should not be included in this class, but should be reported in their proper classes. (See secs. 1 to 8, pp. 38, 39, and 40, of code.)

(*h*) *Derailments due to mistake or misconduct of persons other than employees.*—This class covers derailments such as those resulting from obstruction of track, misplacement of switches, tampering with brakes, etc., by persons other than employees. (See secs. 2 and 3, p. 45, of code.)

(*i*) *Derailments due to ascertained causes not classifiable under any preceding head.*—This class also includes derailments due to two or more immediate causes. The causes of derailments includable in this class should be clearly and fully described. (See sec. 1 and items 4423 to 4488, sec. 4, p. 45, of code.)

(*j*) *Derailments due to unknown causes.*—If any derailment is reported under this head, the reason for so classifying it should be given. The report should show what search or investigation has been made to find the cause of the derailment, and if the cause can not be assigned with certainty, that fact should be stated and the probable cause indicated, if practicable. (See sec. 5, p. 46, of code.)

10. **Locomotive-Boiler Accidents (Class B).**—In reporting locomotive-boiler accidents, complete information should be given, and in cases of explosions resulting from low water in the boiler it should be stated whether the condition was due to negligence of the locomotive crew or to an improper or defective condition of appurtenances used to supply water to the boiler or to indicate the water level therein. (For locomotive-boiler defects, see sec. 1, p. 41, of code.)

Locomotive-boiler accidents should be classified as follows:

(*a*) *Locomotive-boiler shell explosions.*

(*b*) *Crown sheet explosions due to low water where no contributory causes (negligence, or defects in or failures of equipment) are found.*

(*c*) *Crown sheet explosions due to low water where contributory causes (negligence, or defects in or failures of equipment) are found.*

(*d*) *Other explosions.*—This class covers explosions due to stay bolts or crown stays giving way, water foaming, and all other explosions not includable in classes (*a*), (*b*), and (*c*).

(*e*) *Accidents due to defects in or failures of tubing or pipes subject to steam pressure.*—This class covers accidents due to defects in or failures of flues, arch tubes, water bars, superheater tubes, etc.

(*f*) *Other locomotive-boiler accidents.*

11. **Other Locomotive Accidents (Class L).**—This class covers train accidents resulting from defects in or failures of locomotives or tenders, not classifiable as collisions, derailments, or locomotive-boiler accidents. In reporting an accident under this head, describe and give location of the part involved, state the nature of the defect or failure, and explain, so far as may be ascertainable, the cause of, or the conditions or circumstances responsible for or contributing to, the failure.

Other locomotive accidents should be classified as follows:

(*a*) *Accidents due to defects in or failures of locomotive cylinders.*—This class covers accidents due to defects in or failures of locomotive cylinders or cylinder heads, but does not include pistons or other parts.

(*b*) *Accidents due to defects in or failures of driving gear and machinery of locomotives.*—This class covers accidents due to defects in or failures of driving gear and machinery of locomotives, but not of locomotive tenders.

(*c*) *Accidents due to defects in or failures of wheels and axles of locomotives.*—This class does not include accidents resulting in derailments, which should be specifically classified as such.

(*d*) *Accidents due to defects in or failures of parts of locomotive tenders.*—This class covers accidents due to defects in or failures of locomotive tenders or parts or appurtenances of tenders when no derailment results.

(*e*) *Miscellaneous locomotive accidents.*

12. **Miscellaneous Train Accidents (Class M).**—This class covers all train accidents other than collisions, derailments, locomotive-boiler accidents, or other locomotive accidents, classified as follows:

(*a*) *Accidents at public highway crossings.*—This class covers accidents at public highway grade crossings due to trains, locomotives, or cars striking or being struck by trolley cars, automobiles, or other vehicles, or objects other than hand cars or other railway tools or material, which result in damage to railway property but not in derailments. State all material facts, including whether injured persons were pedestrians, occupants of trolley cars, automobiles, or other vehicles, etc.; the nature of protection, if any, afforded at the crossing at the time of an accident; that is, whether crossing gates, watchman, audible or visual signals (not stationary signs), etc.; the kind of vehicle or object struck, and whether the view of the crossing was obscured by buildings, trees, cars, or other objects. (See also secs. 9 (*f*) and 13 (*h*).)

(*b*) *Other miscellaneous train accidents.*—This class covers all train accidents not elsewhere provided for, such as accidents in which cars, not in suitable condition to withstand common train usage, that,

when coupled in trains, may be damaged, but not derailed, through ordinary train movements; accidents caused by trains, etc., striking hand cars, section motor cars and like roadway machines, or bumping posts, that result in no derailment, etc.

GROUP II.—TRAIN-SERVICE ACCIDENTS.

13. **Classification of Train-Service Accidents (Class S).**—In reporting train-service accidents, there should be furnished all pertinent information required by sections of these rules having general application and particularly:

Whether engineman or other employee contributed to the cause of the accident and, if so, in what manner and to what extent.

Whether person injured caught a foot in frog, switch, or guard rail, and, if injured in such a manner, whether safety blocks were in use and what kind.

Whether the presence of fog, snow, or ice contributed to the accident.

Whether failure of brakes or other parts of equipment contributed to the accident.

Train-service accidents should be classified as follows:

(*a*) *Accidents to employees while engaged in coupling or uncoupling locomotives or cars* (see sec. 6–A, p. 47, of code).—State in particular:

Name and style of couplers or uncoupling devices and, if defective, describe in detail the nature and extent of defect.

If employee was killed or injured while between locomotives or cars, explain why he was thus in jeopardy.

(*b*) *Accidents to employees while engaged in coupling or uncoupling air hose (or turning angle cocks in connection therewith), steam hose, and safety chains* (see sec. 6–B, p. 47, of code).—State in particular whether hose or couplings were defective, and, if defective, describe the nature and extent of the defect.

(*c*) *Accidents to employees while operating locomotives* (see sec. 6–C, p. 47, of code).—If locomotive parts or appurtenances were defective, describe in detail the nature and extent of defect. This class also includes employees other than enginemen and firemen who may be assisting in the operation of locomotives.

(*d*) *Accidents to employees while operating hand brakes* (see sec. 6–D, p. 48, of code).—If hand brake was defective, state type and describe in detail the nature and extent of defect.

(*e*) *Accidents to employees while operating switches* (see sec. 6–E, p. 49, of code).—If switch was defective, describe in detail the nature and extent of defect.

(*f*) *Accidents to persons on moving cars or locomotives resulting from coming in contact with any structure or fixture above or at side*

of track (see sec. 6–F, p. 49, of code).—This class covers accidents to all classes of persons resulting from coming in contact with fixed structures, such as bridges, tunnel walls or roofs, platforms, stock chutes, signals, signs, mail cranes, water tanks or penstocks or spouts, coaling stations including chutes or aprons, standpipes, permanently located wires or pipes, etc. State all material facts, including, in particular, when applicable:

Extent of injured person's acquaintance with the road at and in the vicinity of the place of accident; and
Distance between top of locomotive or car and obstruction; or
Distance between side of locomotive or car and obstruction.

(*g*) *Accidents to persons while getting on or off cars or locomotives* (see sec. 6–G, p. 49, of code).—This class covers not only accidents to persons while getting on or off cars or locomotives in the usual manner, but also, in general, accidents to employees in jumping from trains, locomotives, or cars, and to other persons in jumping from moving trains, or in jumping through car windows to escape from custody, or while mentally deranged, or with suicidal intent, etc.

NOTE.—In cases of reportable train accidents in which employees or other persons jumped from cars or locomotives in anticipation of the accidents and thereby received a reportable injury without coming into contact with wreckage, the injury so incurred should be reported separately and included in class (*g*), and cross references made in the Monthly Report between the report of it and the report covering the train accident.

(*h*) *Accidents at highway grade crossings* (see sec. 6–H, p. 50, of code).—This class covers accidents at public highway grade crossings due to trains, locomotives, or cars striking pedestrians or colliding with trolley cars, automobiles, or other vehicles, or objects other than hand cars or other railway tools or material, when such accidents result in reportable casualties but not in damage to railway property in excess of $150, including cost of clearing wreck. State all material facts, including whether injured persons were pedestrians, occupants of trolley cars, automobiles, or other vehicles, riding bicycles or motor cycles, etc.; the nature of protection, if any, afforded at the crossing at the time of an accident; that is, whether crossing gates, watchman, audible or visual signals (not stationary signs), etc.; the kind of vehicle or object struck, and whether the view of crossing was obscured by buildings, trees, cars, or other objects. (See also secs. 9 (*f*) and 12 (a).)

(*i*) *Struck or run over by cars or locomotives not classifiable above* (see sec. 6–I, p. 51, of code).

(*j*) *Miscellaneous train-service accidents not elsewhere classifiable* (see sec. 7–J, p. 51, of code).

GROUP III.—NONTRAIN ACCIDENTS.

14. **Classification of Nontrain Accidents.**—This group covers:

Accidents to employees that do not occur directly in connection with the operation or movement of trains, locomotives, or cars; as, for example, accidents occurring in connection with the construction, repair, or painting of buildings, tracks, or other structures or equipment (except running repairs made by trainmen on the road); with the movement, by shop, enginehouse, or other industrial employees, of locomotives or cars in shops, enginehouses, on repair tracks, etc., when in connection with industrial work; or the loading or unloading of cars at station or freight-house platforms, on yard tracks, or elsewhere; and also

Accidents to all classes of persons while on right of way or other railway premises, that do not occur directly in connection with the operation or movement of trains, locomotives, or cars, except such cases as are excluded by the provisions of sec. 3 of General Instructions, p. 12.

NOTE.—Accidents in which injuries are received by trackmen, bridge and building men, and other classes of employees or other persons and which are caused by trains, locomotives, or cars striking hand cars, tools, or other objects, should be appropriately reported as train accidents or train-service accidents.

The classification of persons to whom reportable casualties occur in nontrain accidents and the classification of such accidents should be in accordance with the "Instructions" given in "Form V."

FORM AND ARRANGEMENT OF REPORTS.

15. **Forms Used and Duplicate Reports.**—Monthly reports of railway accidents (including rail failures causing train accidents) should be made on forms provided by the Interstate Commerce Commission, or on forms identical therewith in arrangement, size, and in color and weight of paper, and every reporting carrier is required to retain in its files a duplicate of each report rendered to the commission. The forms provided, which are of four kinds, are designated as Forms V, T, R, and F.

Each sheet of each report should show in the appropriate place the name of the company for which it is filed, the month and year to which the report relates, together with all other particulars called for by the form. Each sheet of each report following Form V should bear the autograph signature of a responsible officer or employee.

16. **Form V (Verification).**—A report should be made on this form each month, even though no reportable (train, train-service, or nontrain) accident occurred during the month covered. Such report should include an oath or verification, made by the proper officer of the reporting carrier, as provided for attestation on Form V, which should show the number of train and train-service accidents that

occurred during the month for which the report is made, and the number of sheets, inclusive of Form V. If no reportable accident occurred during the month, that fact should be stated on this form. Form V should also show the total number of locomotive-miles run during the month, computed in accordance with the Interstate Commerce Commission's Classification of Train-miles, Locomotive-miles, and Car-miles. If any reportable nontrain accidents occurred during the month, they should be reported in the tables provided on Form V, but if none occurred, that fact should be stated as required.

17. **Form T (Train and Train-Service Accidents).**—A separate Form T sheet should be used for each reportable train accident or train-service accident and should show the required particulars concerning the accident.

18. **Form R (Rail Failures).**—In case of reportable train accidents resulting from rail failures, particulars of the failures should be reported on Form R, and all the information called for on that form should be furnished additionally to that required on Form T.

19. **Form F (Subsequent Fatalities).**—If, as the result of an injury, a person dies more than 24 hours after the occurrence of the accident, the casualty should be reported on a Form T as an injury, with full details as required by the provisions of the form, and in addition, a memorandum of the death should be given on Form F in accordance with the requirements of that form. This additional report is to be made in connection with the report for the month in which the accident occurred, if practicable, otherwise it should separately accompany the first monthly report filed after the death has come to the knowledge of the carrier. A single Form F may contain reports of more than one such fatality, provided all persons included therein were injured during the same month. A Form F is not required in relation to a nontrain accident.

20. **Classification Symbols.**—Symbols indicating the class of train accidents or of train-service accidents and the class of persons involved should be entered in the appropriate spaces on Form T as follows:

Class of accident.—Sheets carrying reports of collisions are to be marked C; those relating to derailments, D; those relating to locomotive-boiler accidents, B; those relating to other locomotive accidents (not resulting in collisions or derailments), L; those relating to miscellaneous train accidents, M; and those relating to train-service accidents, S. To each of these primary class symbols should be added the proper small letter to indicate the subclass covering the accident. (See secs. 8 to 13.)

Class of person.—The designation of the class of person should include the applicable capital letter preceding the name of the class,

to which should be added the number of the "Reporting Division," or the small letter applicable to the subclass, with such other descriptive detail as may be appropriate. (See sec. 31.)

21. **Arrangement and Numbering of Sheets.**—All the forms in a monthly report should be arranged in the order V, T, R, and F. All Forms T should be further grouped in accordance with the character of the accidents and arranged in the order C, D, B, L, M, and S, and subgrouped in order by subclasses; as, for example, first all of C–a, followed by all of C–b, followed in turn by all of C–c, etc., throughout the series. All sheets are to be numbered consecutively, beginning with No. 1 for Form V each month. When properly arranged and numbered, all sheets, including Form V, should be securely fastened.

In no case should the report for any month include a Form T sheet completed for an accident that did not occur during the month covered by the report. Should it be discovered by a carrier that the report of a particular accident on a Form T has, through mistake or otherwise, been improperly omitted from its regular monthly accident report, the sheet covering such accident should be separately transmitted to the Bureau of Statistics, with a suitable letter of explanation.

PARTICULARS TO BE REPORTED.

22. **General.**—Such of the following provisions as apply in any case should be carefully observed in the preparation of reports of both train and train-service accidents, and wherever a pertinent requirement is not complied with the report should explain the omission.

Reporting officers should endeavor to supply sufficient information in each report to enable the Interstate Commerce Commission to classify all data pertaining to each accident in accordance with the codes in the Appendix beginning on page 37.

In cases of train accidents it is necessary to show whether the accidents were attributable to—

Negligence of employees.
Defects in or failures of equipment.
Defects in or improper maintenance of way and structures.
Miscellaneous causes.

The report of an accident should give, so far as pertinent, particulars of the accident, such as time, place, weather, light, persons involved, equipment and other property damaged or involved, causes of accident, so far as ascertained (and if not ascertained, the report should indicate what effort has been made to ascertain causes and what seems to have been the most probable cause), description and extent of the damage caused, and suggested improvements in procedure, plant, and equipment for the prevention of similar accidents, cause and effects of fire, if any; experience and (whenever significant) condition of employee who caused or is believed or supposed to have

caused the accident. The report should indicate whether or not such employee had been continuously on duty for more than 16 hours at the time of the accident or had had less than 8 hours' rest before going on duty.

Unless manifestly without importance in the matter, quote the operating rule or rules bearing on the case, or give an essential abstract of the pertinent regulations, and indicate wherein the employee at fault, if any, violated the requirements.

23. **Visibility.**—The report should give sufficient particulars to show whether vision was obstructed or obscured and, if either, from what cause and to what extent.

24. **Place.**—In reporting place, the name of the State in which the accident occurred and the nearest station should be reported; also the direction and estimated distance from such station, unless the accident occurred directly at a station or in a yard, in which latter case the yard should be named or described.

25. **Definition of Yard.**—By the word "yard," as herein used, is meant a system of auxiliary tracks within defined limits provided for the making up of trains, storing of cars, and other purposes, over which movements not authorized by train order or time-table may be made, subject to prescribed signals and regulations. Sidings used exclusively as passing track are not included, nor is the main line within yard limits, and if an accident occurs on or results in fouling a main line so located that fact should be stated.

26. **Trains—Description and Particulars.**—For the purpose of reporting railway accidents a train may be defined as a locomotive, or more than one locomotive coupled, with or without cars, displaying markers. Hand cars, section motor cars, and like roadway machines, are not to be regarded as "cars," within the meaning of this definition.

DESCRIPTION.

In reporting accidents involving trains, locomotives, or cars, sufficient particulars should be given to show definitely to which of the six classes of service described below the equipment was assigned. Definite information is required in this respect and descriptive terms of local application, such as "milk," "transfer," "mine," etc., should not be used to designate classes of trains. In connection with this matter, a light engine involved in an accident should be classified as belonging to that class of service to which its assignment at the time of accident was related.

Transportation service—Freight.—This class includes trains run between terminals or stations for the purpose of transporting revenue freight; also those transporting only company freight when statistics of ton-miles are kept for the freight thus transported; also trains consisting of empty freight cars and trains consisting of a locomotive and a caboose running light in connection with such service. When milk, baggage, or other cars (not passenger cars or combination passenger and other cars) are hauled in a freight train, they do not change its class. Freight trains that regularly haul no passenger service equipment but transport passengers in a caboose should be classified as freight trains, as should also freight trains temporarily using a passenger car in place of a caboose, or that only occasionally contain a car devoted to passenger traffic.

Transportation service—Passenger.—This class includes trains run for the purpose of transporting passengers, baggage, mail, milk, express, or any combination of these; also trains consisting of dead-head passenger equipment. When one or more cars, other than regular passenger-train cars, are hauled incidentally in a passenger train, they do not change its class.

Transportation service—Mixed.—This class includes trains containing both freight-train cars moved in connection with freight traffic and passenger-train cars moved in connection with passenger traffic. The incidental omission of either freight-train or passenger-train cars from a regularly scheduled mixed train does not change its class.

Transportation service—Special.—This class includes revenue-earning trains not provided for in the three foregoing classes, such as chartered trains paid for either on the basis of a rate per mile run or a lump sum for the train, circus and theatrical trains run under contracts calling for payment of specified amounts for transportation between designated stations, chartered trains for the Federal or State Governments carrying troops, munitions of war, camp outfits, etc.

Work service.—This class includes nonrevenue trains run in the administration and upkeep service of the carrier, such as official trains, inspection trains, pay trains, special trains running with company fire apparatus to save the carrier's property from destruction, and trains run for the purpose of transporting the carrier's employees to and from work when no transportation charge is made; wrecking trains; construction and upkeep trains run in connection with maintenance and construction work, the cost of operating such trains being chargeable to the appropriate construction or maintenance accounts for rail-line operations; material and supply trains run for the purpose of distributing ties, rails, other track material, ballast, bridge material, and other materials and supplies at stations, towers, section houses, and other points; trains run for picking up and concentrating such material; and trains run for distributing material and supplies for use in connection with operation.

NOTE.—Work-service trains do not include solid fuel trains and other freight trains laden with company material and running from station to station under the same operating conditions as ordinary revenue freight trains.

Yard service.—This class of service includes the handling of equipment being switched or used in switching other equipment, as, for example, in making or breaking up trains, serving industrial tracks, storing, weighing, or classifying cars, and other like operations, that may be made without time-table or train order authority, subject to prescribed signals. Operations incidental to a road run when performed by a road train crew are not included.

PARTICULARS.

There should be given for each train involved—

Class of service as indicated above.
Number of train and locomotive.
Time-table direction in which bound at the time of accident (east, west, north, or south).
Estimated speed in miles per hour (but if train was at rest, it should be so stated).

When pertinent, state whether the train was being operated in accordance with the act of Congress of March 2, 1893, requiring the use of air brakes, how many cars were and how many were not equipped with air brakes, and on how many the air brakes were operative. State whether the air brakes on the locomotive were operative. State the number of loaded cars and the number of empty cars in the train; gross weight of train; number of locomotives pushing or pulling train; number of brakemen on train; where and when locomotives, cars, and brakes were last inspected; and the number of hand brakes used (if any), together with the reason for their use. Whenever material, state also under what orders the train was moving and what were its rights of track at the particular time and place of the accident.

27. **Defective Equipment.**—In the description of equipment defects that cause or contribute to either a train or a train-service accident, the report should show, whenever significant—

Number and initial of car.
Manufacturer and type of equipment or part.
Weight, number, and other identifying marks.
Year of manufacture and year of placing in service.
When, where, and by what class of employee the equipment was last inspected, whether any defects were noted, and, if any, what remedies were applied.

In reporting accidents involving appliances subject to the Federal safety appliance acts, the Commission's Classification of Safety Appliance Defects should be followed.

Describe the defective equipment involved with sufficient particularity to permit its classification in the code of "Defects in or Failures of Equipment," in the Appendix on page 41, and furnish information as follows:

Locomotive and parts:

Description—

Type, as simple, compound, articulated, etc.
Wheel arrangement.
Weight on drivers and total weight ready for service.

Parts—

Firebox and attachments.
Boiler and attachments.
Cylinders and steam chests.
Reciprocating parts.
Headlight.
Pilot.
Drivers.
Truck wheels.
Other parts of running gear as enumerated under cars.
Miscellaneous parts, naming them.

In case of electric locomotives, give similarly detailed information so far as practicable.

Cars and parts:

Wheels.
Axles and journals.
Boxes.
Truck frames and parts, naming them.
Couplers.
Draft gear and parts, naming them.
Brakes—
(1) Power.
(2) Hand.
Underframing.
Car sides.
Car ends.
Car roofs.
Miscellaneous parts, naming them.

Floating equipment: Give particulars.

28. **Defective Way and Structures.**—In statements covering defects or failures of rails, rail fastenings, switches, signal or other apparatus that caused or contributed to an accident, the report should show, whenever significant:

Manufacture and type of apparatus or part.
Weight, number, and other identifying marks.
Year of manufacture and year of placing in service.
When and by what class of employee inspected, whether any defects were noted, and, if any, what remedies were applied.

Describe the defective structure or parts with sufficient particularity to permit a classification in the code of "Defects in or Improper Maintenance of Way and Structures," in the Appendix on

page 43, and give sufficient information to permit identification under the following heads:

Roadbed, including embankments, cuts, ditches, drainage, etc.
Bridges, trestles, and culverts.
Ties, stating whether wood, steel, concrete, or other material, and, if wood, state kind and whether treated or untreated.
Rails, giving information required by Form R. If a rail failure occurs at a joint or within the space covered by angle or splice bars or at holes drilled for bonding or other purposes care should be taken to determine whether the joint or bolt or bonding holes or insulation caused or contributed to such failure, and, if determined, full particulars should be given.
Rail fastenings.
Switches.
Signal apparatus.
Clearances—
Overhead.
Side.
Buildings (describing each and indicating its ordinary use).

29. **Damage.**—A brief description of the damage (if any) resulting to the equipment, way, structures, and other property of the reporting carrier should be furnished, as well as the expense occasioned thereby in the case of train accidents. A statement of the amount of damage is not required for train-service or nontrain accidents. Damage to the property of railway companies other than the reporting carrier should also be described, so far as practicable, and if such property is railway equipment it should be described with the same particularity as would be appropriate were it the property of the company making the report.

In determining the amount of damage to railway property (including damage to foreign cars) the cost of clearing wreck should be included, but not any amount because of damage to freight or baggage, stock on right of way, or to other property of noncarriers, or because of personal injuries. The amount reported should be subdivided so as to show damage to equipment, to other railway property, and cost of clearing wreck (including the local expense of transferring lading made necessary as a result of the accident). If the amount of damage is not known at the time the report is filed with the commission, it should be estimated as accurately as practicable, and the fact that it is estimated should be stated.

30. **Casualties—Classification and Particulars.**—

Classification.—In reporting casualties to persons the following distinctions should be observed:

Killed.—Any person killed in an accident at the time of its occurrence, or so seriously injured as to die within 24 hours thereafter, should be reported as "killed."

NOTE.—See section 19 for instructions relative to injuries that subsequently result in death.

Injured.—Employees so seriously injured as to be incapacitated from performing their ordinary duties for more than 3 days, in the aggregate, during the 10 days immediately following the accident, should be reported as injured. This rule applies both to employees on duty and to those classed as not on duty, but does not apply to employees classed as passengers or trespassers.

Other persons should be reported as injured if the injury is sufficient, in the opinion of the reporting officer, to incapacitate the injured person from following his customary vocation or mode of life for a period of more than one day. This rule applies also to employees classed as passengers or trespassers.

Particulars.—Personal injuries should be sufficiently described to indicate—

The part of body injured and the specific nature and extent of the injury received (which should be reported in sufficient detail to enable the Interstate Commerce Commission to classify the injury in accordance with the code on page 54. Indefinite terms such as "mashed," "crushed," "injured," "hurt," etc., should not be used). In case of loss of any part, the extent should be indicated, as, for example, tip of index finger of right hand, two middle fingers to second joint of left hand, left arm to elbow, loss of right eye, etc.
The actual number of days of disability if ascertained at the time the report is made but, if the disability has not terminated by that time or is not ascertainable, an estimate of the number should be shown in the appropriate column on Form T, or the absence of an estimate fully explained.
The degree to which the person is maimed, if at all.

NOTE.—When the injury is of a permanent nature that fact may be stated in lieu of the number of days' disability.

CLASSIFICATION OF PERSONS.

31. **Classification.**—For the purpose of monthly reports, persons involved in railway accidents other than nontrain accidents should be named and sufficient particulars of each person should be given to permit an appropriate classification among the following classes:

(A) Employees on duty.—An employee should be considered on duty when he is, at the request or direction of the carrier, rendering

service or holding himself in readiness at his post of duty. He is not to be considered on duty while relieved from service and from responsibility for the performance of service, or while willfully and improperly absent from his post of duty. The classification of employees on duty is to be determined by the character of the work on which they are engaged, or to which they may be detailed, at the time of the accident. If this is different from that of their usual and customary duties, particulars should be given.

If any person killed or injured in an accident is known or believed to be an employee of another carrier that fact should be stated and appropriate class symbols indicating the customary occupation of the employee, with the name of the carrier by which he is employed, should be entered.

(B) Employees not on duty.—This class is restricted to employees lawfully on the premises of the carrier. Whenever an employee not on duty is injured, the report should explain the occasion of the employee's presence at the place of the accident. Employees trespassing should be included in Class (F) as trespassers. Employees (including trainmen deadheading between terminals, etc.,) when traveling as passengers should be included in Class (C) as passengers.

The following list of 148 Reporting Divisions into which all the distinctive classes of railway positions are grouped is derived from the "Rules Governing the Classification of Steam Railway Employees and Reports of Their Service and Compensation" prescribed by the Interstate Commerce Commission to be effective on July 1, 1921. The returns on all accident report forms should, with respect to the classification of employees, be made in conformity with these Reporting Divisions. For each employee reported on Form T as killed or injured there should be given the correct number of the Reporting Division to which the employee is properly assignable, and also the pay-roll or distinctive class title of his occupational position. The letter (A) or (B) should be used to indicate respectively whether he was on or off duty at the time of accident. Abbreviations or contractions may be used in the indication of position titles, if their meaning is sufficiently clear. For example, to indicate a casualty sustained by a road freight brakeman (through freight) on duty, the proper designation of class of person on Form T would be A-137, Road Freight Brakeman (through freight), while that of a casualty incurred in a train or a train-service accident by a buffet car porter on duty would be A-122, Buffet Car Porter.

List of reporting divisions for employees.

Division No.	Reporting division.
	I.—*Executives, officials, and staff assistants.*
1	Executives, general officers, and assistants.
2	Division officers, assistants, and staff assistants.
	II.—*Professional, clerical, and general.*
3	Architectural, chemical, and engineering assistants (A).
4	Architectural, chemical, and engineering assistants (B).
5	Subprofessional engineering and laboratory assistants.
6	Professional and subprofessional legal assistants.
7	Supervisory or chief clerks (major departments).
8	Chief clerks (minor departments) and assistant chief clerks and supervising cashiers.
9	Clerks and clerical specialists (A).
10	Clerks (B).
11	Clerks (C).
12	Mechanical device operators (office).
13	Stenographers and secretaries (A).
14	Stenographers and typists (B).
15	Storekeepers, sales agents, and buyers.
16	Ticket agents and assistant ticket agents.
17	Traveling auditors or accountants.
18	Telephone switchboard operators and office assistants.
19	Messengers and office boys.
20	Elevator operators and other office attendants.
21	Lieutenants and sergeants of police.
22	Patrolmen.
23	Watchmen (without police authority).
24	Supervising traffic agents.
25	Traffic agents, advertising and development agents.
26	Fire prevention, smoke, and time-service inspectors, and office building superintendents.
27	Claim agents and claim investigators.
28	Real estate and tax agents and investigators.
29	Examiners, instructors, and special investigators.
30	Miscellaneous trades workers (other than plumbers).
31	Motor vehicle and motor car operators.
32	Teamsters and stablemen.
33	Janitors and cleaners.
	III.—*Maintenance of way and structures.*
34	Roadmasters and general foremen (M. of W. and S.).
35	Assistant general foremen (M. of W. and S.).
36	Supervising maintenance of way inspectors and scale inspectors.
37	Maintenance of way inspectors.
38	Bridge and building gang foremen (skilled labor, M. of W. and S.).
39	Bridge and building carpenters.
40	Bridge and building ironworkers.
41	Bridge and building painters.
42	Masons, bricklayers, plasterers, and plumbers.
43	Skilled trades helpers (M. of W. and S.).
44	Regular apprentices (M. of W. and S.).
45	Portable steam equipment operators (M. of W. and S.).
46	Portable steam equipment operator helpers (M. of W. and S.).
47	Pumping equipment operators (M. of W. and S.).
48	Gang foremen (extra gang and work-train laborers).
49	Gang foremen (bridge and building, signal and telegraph laborers).
50	Gang or section foremen.

List of reporting divisions for employees—Continued.

Division No.	Reporting division.
	III.—*Maintenance of way and structures*—Continued.
81	Laborers (extra gang and work-train).
82	Track and roadway section laborers.
83	Maintenance of way laborers (other than track and roadway) and gardeners and farmers.
84	General foremen and supervising inspectors (signal, telegraph, and electrical transmission).
85	Assistant general foremen (signal, telegraph, and electrical transmission) and signal and telegraph inspectors.
86	Gang foremen (signal) and telegraph skilled trades labor).
87	Signalmen and signal maintainers.
88	Linemen and groundmen.
89	Assistant signalmen and assistant signal maintainers.
90	Signalmen and signal maintainer helpers.
	IV.—*Maintenance of equipment and stores.*
91	General foremen (M. E.).
92	Assistant general foremen and department foremen (M. E.).
93	General foremen (stores).
94	Assistant general foremen (stores).
95	Equipment, shop, and electrical inspectors (M. E.).
96	Material and supplies inspectors.
97	Gang foremen and gang leaders (skilled labor).
98	Machinists.
99	Boilermakers.
70	Carmen (A).
71	Carmen (B).
72	Carmen (C).
73	Carmen (D).
74	Electrical workers (A).
75	Electrical workers (B).
76	Electrical workers (C).
77	Machinists.
78	Molders.
79	Sheet-metal workers.
80	Skilled trades helpers (M. E. and Stores).
81	Helper apprentices (M. E. and Stores).
82	Regular apprentices (M. E. and Stores).
83	Gang foremen laborers (shops, enginehouses, power plants, and stores).
84	Coach cleaners.
85	Laborers (shops, enginehouses, and power plants).
86	Common laborers (shops, enginehouses, power plants, and stores).
87	Stationary engineers (steam).
88	Stationary firemen and oilers (steam and electrical plants).
89	Coal passers and water tenders (steam station boiler rooms).
	V.—*Transportation (other than train, engine, and yard).*
90	Chief train dispatchers, train dispatchers, and train directors.
91	Station agents (supervisory, major stations, nontelegraphers).
92	Station agents (supervisory, smaller stations, nontelegraphers).
93	Station agents (nonsupervisory, smaller stations, nontelegraphers).
94	Station agents (telegraphers and telephoners).
95	Chief telegraphers and telephoners or wire chiefs.
96	Clerk-telegraphers and clerk-telephoners.
97	Telegraphers, telephoners, and towermen.
98	Station masters and assistants.
99	Supervising baggage agents.

List of reporting divisions for employees—Continued.

Division No.	Reporting division.
	V.—*Transportation (other than train, engine, and yard)*—Continued.
100	Baggage agents and assistants.
101	Baggage, parcel room, and station attendants.
102	General foremen (freight stations, warehouses, grain elevators, and docks).
103	Assistant general foremen (freight stations, warehouses, grain elevators, and docks).
104	Gang foremen (freight station, warehouse, grain elevator, and dock labor).
105	Callers, loaders, scalers, sealers, and perishable freight inspectors.
106	Truckers (stations, warehouses, and platforms).
107	Laborers (coal and ore docks and grain elevators).
108	Common laborers (stations, warehouses, platforms, and grain elevators).
109	Stewards, restaurant and lodging-house managers, and dining-car supervisors.
110	Chefs and first cooks (dining cars and restaurants).
111	Second and third cooks (dining cars and restaurants).
112	Waiters and lodging-house attendants.
113	Camp and crew cooks and kitchen helpers.
114	Barge, lighter, and gasoline launch officers and workers.
115	Deck officers (ferryboats and towing vessels).
116	Engine-room officers (ferryboats and towing vessels).
117	Deck and engine-room workers (ferryboats and towing vessels).
118	Deck and engine-room officers and workers (steamers).
119	Floating equipment shore workers and attendants.
120	Transportation and dining service inspectors.
121	Parlor and sleeping car conductors.
122	Train attendants.
123	Bridge operators and helpers.
124	Crossing and bridge flagmen and gatemen.
125	Foremen (laundry) and laundry workers.
	VI (a).—*Transportation (yardmasters, switch tenders, and hostlers).*
126	Yardmasters and assistants.
127	Switch tenders.
128	Outside hostlers.
129	Inside hostlers.
130	Outside hostler helpers.
	VI (b).—*Transportation (train and engine).*
131	Road passenger conductors.
132	Assistant road passenger conductors and ticket collectors.
133	Road freight conductors (through freight).
134	Road freight conductors (local and way freight).
135	Road passenger baggagemen.
136	Road passenger brakemen and flagmen.
137	Road freight brakemen and flagmen (through freight).
138	Road freight brakemen and flagmen (local and way freight).
139	Yard conductors and yard foremen.
140	Yard brakemen and yard helpers.
141	Road passenger engineers and motormen.
142	Road freight engineers and motormen (through freight).
143	Road freight engineers and motormen (local and way freight).
144	Yard engineers and motormen.
145	Road passenger firemen and helpers.
146	Road freight firemen and helpers (through freight).
147	Road freight firemen and helpers (local and way freight).
148	Yard firemen and helpers.

(C) Passengers.

(a) On or getting on or off passenger trains.
(b) On or getting on or off other trains.
(c) Not on trains.

The class "Passengers" is to cover passengers on trains and all persons lawfully on the premises of the carrier incidentally to traveling on its trains, including passengers temporarily off trains, as at railway restaurants, etc., and at junctions in transferring from one train to another.

(D) Persons carried under contract.

(a) On or getting on or off passenger trains.
(b) On or getting on or off other trains.
(c) Not on trains.

The term "Persons carried under contract" is used herein to mean such persons as postal clerks, express messengers, Pullman conductors and porters, city baggage transfer and omnibus agents, newsboys, peddlers, live-stock tenders and others (not employees of the carrier) in charge of freight, and other like classes of persons authorized by the carrier to be on its trains *primarily for the conduct of their business* and not for the purpose of travel. Such persons when riding as passengers should be classed as passengers.

(E) Other nontrespassers.

(a) On or getting on or off passenger trains.
(b) On or getting on or off other trains.
(c) Not on trains.

The class "Other nontrespassers" covers persons on public highway crossings, unless classable as trespassers, and persons on the carrier's premises by license, permission, or invitation, who are not classable as employees, passengers, or persons carried under contract, such as persons present to meet trains or to transact business with the carrier, and persons adjacent to railway premises when injured as the result of the operation of the railway. (Students learning the road, etc., in anticipation of employment when sufficiently prepared should, if receiving no compensation, be included in this class.)

(F) Trespassers, employees.

(a) Walking along track.
(b) Crossing tracks at public highway crossings.
(c) Crossing tracks at other places.
(d) On or getting on or off trains.
(e) Not otherwise classed.

TRESPASSERS, OTHER THAN EMPLOYEES:

(G) Trespassers; under 14 years of age.

(a) Walking along track.
(b) Crossing tracks at public highway crossings.
(c) Crossing tracks at other places.
(d) On or getting on or off trains.
(e) Not otherwise classed.

(H) Trespassers; 14 to 21 years of age.

(a) Walking along track.
(b) Crossing tracks at public highway crossings.
(c) Crossing tracks at other places.
(d) On or getting on or off trains.
(e) Not otherwise classed.

(I) Trespassers; adult hoboes or tramps.

(a) Walking along track.
(b) Crossing tracks at public highway crossings.
(c) Crossing tracks at other places.
(d) On or getting on or off trains.
(e) Not otherwise classed.

(J) Trespassers; adults, other persons. (Includes residents of vicinity, visitors, and all other persons trespassing except itinerant unemployed.)

(a) Walking along track.
(b) Crossing tracks at public highway crossings.
(c) Crossing tracks at other places.
(d) On or getting on or off trains.
(e) Not otherwise classed.

Whenever persons are classed as "trespassers" the report should state the circumstances that warrant such a classification and, if possible, the regular occupation of such persons killed or injured.

A person should not be classed as a trespasser on a highway grade crossing unless the crossing is protected by gates, or other similar barriers, which were closed when the person went on the crossing, or unless the person attempted to pass over or under trains or cars at the crossing.

ORDER.

At a session of the INTERSTATE COMMERCE COMMISSION, Division 4, held at its office in Washington, D.C., on the 21st day of September, 1932.

The matter of accident statistics being under consideration,

It is ordered, That subdivision (C) of section 31 of the Rules Governing Monthly Reports of Railway Accidents, effective January 1, 1922, reading as follows:

(C) Passengers.

(a) On or getting on or off passenger trains.
(b) On or getting on or off other trains.
(c) Not on trains.

The class "Passengers" is to cover passengers on trains and all persons lawfully on the premises of the carrier incidentally to traveling on its trains, including passengers temporarily off trains, as at railway restaurants, etc., and at junctions in transferring from one train to another.

be, and it is hereby, modified to read as follows:

(C-1) Passengers on trains.

(a) On or getting on or off passenger trains.
(b) On or getting on or off other trains.

The class "Passengers on trains" is to cover persons holding transportation or paying cash fares who are actually on or getting on or off passenger-carrying trains under conditions not constituting trespass.

(C-2) Travelers not on trains.

The class "Travelers not on trains" is to cover persons who are lawfully on railway premises in connection with their journeys as passengers by railway and not covered by Class (C-1).

The reference to Class (C) in subdivision (B), Employees not on duty, of said section 31 shall be understood as applying to classes (C-1) or (C-2) as may be appropriate according to the nature of the accident.

It is further ordered, That the foregoing modification of subdivision (C) of said section 31 shall become effective as of January 1, 1933.

By the Commission, Division 4:

[SEAL] GEORGE B. McGINTY, *Secretary*.

6

ORDER.

At a session of the INTERSTATE COMMERCE COMMISSION, Division 4, held at its office in Washington, D. C., on the 17th day of December, A. D. 1932.

The matter of accident statistics being under consideration,

It is ordered, That the list of reporting divisions and the introductory paragraph thereto in section 31 of the Rules Governing Monthly Reports of Railway Accidents, effective January 1, 1922, be, and are hereby, eliminated, and the following substituted therefor:

The following list of 128 Reporting Divisions into which all the distinctive classes of railway positions are grouped is derived from the "Rules Governing the Classification of Steam Railway Employees and Reports of Their Service and Compensation" prescribed by the Interstate Commerce Commission to be effective on July 1, 1921, as amended by order of October 20, 1932. The returns on all accident report forms should, with respect to the classification of employees, be made in conformity with these Reporting Divisions. For each employee reported on Form T as killed or injured there should be given the correct number of the Reporting Division to which the employee is properly assignable, and also the pay-roll or distinctive class title of his occupational position. The letter (A) or (B) should be used to indicate respectively whether he was on or off duty at the time of accident. Abbreviations or contractions may be used in the indication of position titles, if their meaning is sufficiently clear. For example, to indicate a casualty sustained by a road freight brakeman (through freight) on duty, the proper designation of class of person on Form T would be A-117, Road Freight Brakeman and Flagman (through freight), while that of a casualty incurred in a train or a train-service accident by a buffet car porter on duty would be A-101, Train Attendants.

It is further ordered, That this order shall become effective on January 1, 1933.

By the Commission, Division 4:

[SEAL] GEORGE B. McGINTY,
Secretary.

ORDER.

At a Session of the INTERSTATE COMMERCE COMMISSION, Division 4, held at its office in Washington, D. C., on the 14th day of January, 1936.

The matter of accident statistics being under consideration,

It is ordered, That the second, third, and fourth paragraphs of section 26 of the Rules Governing Monthly Reports of Railway Accidents, effective January 1, 1922, be, and they are hereby, modified to read as follows:

DESCRIPTION.

In reporting accidents involving trains, locomotives, or cars, sufficient particulars should be given to show definitely to which of the four classes described below the equipment was assigned. Definite information is required in this respect and descriptive terms of local application, such as "milk," "transfer," "mine," etc., should not be used to designate classes of trains. In connection with this matter, a light engine involved in an accident should be classified as belonging to that class of service to which its assignment at the time of accident was related.

Transportation service—Freight.—This class includes trains run between terminals or stations containing loaded or empty freight-train cars and trains consisting of a locomotive and caboose running light in connection with such service. Trains which contain passenger-train cars shall be classed as freight trains whenever the number of freight-train cars is in excess of the number of passenger-train cars in them.

Transportation service—Passenger.—This class includes trains run between terminals or stations containing loaded or empty passenger-train cars and trains consisting of deadhead passenger-train cars. Trains which contain freight-train cars shall be classed as passenger trains whenever the number of passenger-train cars is in excess of the number of freight-train cars in them.

It is further ordered, That the fifth and sixth paragraphs of said section 26 relating to mixed and special transportation service be and hereby are canceled.

It is further ordered, That the foregoing modification of section 26 shall become effective as of January 1, 1936.

By the Commission, Division 4:

[SEAL] GEORGE B. McGINTY,
Secretary.

Defendant's Exhibit No. 261 (Witness J.J. Sullivan)
Feb. 5, 1941

INTERSTATE COMMERCE COMMISSION RULES GOVERNING MONTHLY REPORTS OF RAILWAY ACCIDENTS EFFECTIVE ON JANUARY 1, 1922

ABSTRACT OF PAGES 22 AND 23

FORM AND ARRANGEMENT OF REPORTS.

15. **Forms Used and Duplicate Reports.**—Monthly reports of railway accidents (including rail failures causing train accidents) should be made on forms provided by the Interstate Commerce Commission or on forms identical therewith in arrangement, size, and in color and weight of paper, and every reporting carrier is required to retain in its files a duplicate of each report rendered to the commission. The forms provided, which are of four kinds, are designated as Forms V, T, R, and F.

Each sheet of each report should show in the appropriate place the name of the company for which it is filed, the month and year to which the report relates, together with all other particulars called for by the form. Each sheet of each report following Form V should bear the autograph signature of a responsible officer or employee.

16. **Form V (Verification).**—A report should be made on this form each month, even though no reportable (train, train-service, or nontrain) accident occurred during the month covered. Such report should include an oath or verification, made by the proper officer of the reporting carrier, as provided for attestation on Form V, which should show the number of train and train-service accidents that occurred during the month for which the report is made, and the number of sheets, inclusive of Form V. If no reportable accident occurred during the month, that fact should be stated on this form. Form V should also show the total number of locomotive-miles run during the month, computed in accordance with the Interstate Commerce Commission's Classification of Train-miles, Locomotive-miles, and Car-miles. If any reportable nontrain accidents occurred during the month, they should be reported in the tables provided on Form V, but if none occurred, that fact should be stated as required.

17. **Form T (Train and Train-Service Accidents).**—A separate Form T sheet should be used for each reportable train accident or train-service accident and should show the required particulars concerning the accident.

18. **Form R (Rail Failures).**—In case of reportable train accidents resulting from rail failures, particulars of the failures should be reported on Form R; and all the information called for on that form should be furnished additionally to that required on Form T.

19. **Form F (Subsequent Fatalities).**—If, as the result of an injury, a person dies more than 24 hours after the occurrence of the accident, the casualty should be reported on a Form T as an injury, with full details as required by the provisions of the form, and in addition, a memorandum of the death should be given on Form F in accordance with the requirements of that form. This additional report is to be made in connection with the report for the month in which the accident occurred, if practicable, otherwise it should separately accompany the first monthly report filed after the death has come to the knowledge of the carrier. A single Form F may contain reports of more than one such fatality, provided all persons included therein were injured during the same month. A Form F is not required in relation to a nontrain accident.

(1940 Revision)

MONTHLY REPORT OF RAILWAY ACCIDENTS

TO THE INTERSTATE COMMERCE COMMISSION

BUREAU OF STATISTICS

Form V

Name of reporting carrier } ..... Report for the month of } ....., 194....

..... (Name of reporting officer) ..... (Official title) ..... (Address)

Total number of miles run during month:

Locomotive .....

Motor train .....

Total .....

This report consists of ..... sheets, numbered 1 to ....., inclusive

VERIFICATION

STATE OF .....
COUNTY OF ..... } ss:

I, ... (Name of affiant), being first duly sworn, do say upon my oath that I am ..... (Title of office held by affiant) of ..... (Name of reporting carrier); that as such officer of the said carrier it is my duty to have supervision over the record of reportable accidents arising from the operation of the railway of the said carrier, and that I have caused to be compiled from the said record and to be carefully examined the annexed report of such accidents occurring during the month named at the head of this sheet; that the total number of train and train-service accidents (as defined in the effective rules of the Interstate Commerce Commission) during the said month was .....; that the said annexed report includes ..... sheets in addition to the present sheet; that each of said additional sheets is marked with the name of the month and the year above shown and the name of the reporting carrier, and is validated with the autograph signature of a responsible officer or employee of the said carrier; and that the said report is true and complete to the best of my knowledge and belief.

Subscribed and sworn to before me, a notary public in and for the State and County aforesaid, this ..... day of ....., 194....

(Use an impression seal) [L. S.]

..... Notary Public. ..... (Signature of affiant)

INSTRUCTIONS

1. **A report should be filed on Form V each month regardless of whether a reportable accident of any kind occurred during the month.**
2. The tabular statements of *nontrain* accidents (Sections A and B) must include all reportable nontrain accidents as defined in the Commission's Rules Governing Monthly Reports Railway Accidents. If no reportable nontrain accident occurred during the month covered by a report, that fact should be indicated by entering the word "None" opposite "Total persons in nontrain accidents" in Section B.
3. It should be noted that no casualties resulting from *train* or *train-service* accidents should be included in Sections A and B, as these sections pertain exclusively to nontrain accidents.
4. Accidents to persons resulting in immediate death or in death within 24 hours from the time the accident occurred should be reported in columns headed "Killed"; all other reportable accidents to persons, including those resulting in death of the persons injured after an interval of more than 24 hours from the time the accident occurred, should be reported in the columns headed "Injured".
5. Casualties to employees should be included in the returns when the period of incapacity exceeds 3 days in the aggregate during the 10 days immediately following the accident, and casualties to other persons should be included when the period of disability exceeds 1 day.
6. In the current "Rules Governing the Classification of Steam Railway Employees", etc., prescribed by the Interstate Commerce Commission, the distinctive classes of railway positions are grouped into 128 so-called Reporting Divisions, named in this form, and returns of casualties to employees should be made in conformity with them.
7. SECTION A.—This section pertains exclusively to casualties to employees on duty caused by reportable nontrain accidents.
8. SECTION B.—This section should include casualties to all classes of persons in reportable nontrain accidents.
9. SECTION C.—This section is intended for the recapitulation of reportable casualties to persons of all classes incurred in railway accidents of all kinds, and so should cover all *nontrain* casualties includable in Section B of Form V, as well as all *train* and *train-service* casualties returnable in Form T. Item No. 7, "Trespassers", is to include all persons regardless of class when trespassing.
10. SECTION D.—This section requires a separate statement of all casualties in train and train-service accidents occurring at public highway grade crossings that are properly included in Section C also.
11. SECTION E.—This section requires a separate statement of all casualties due to failures of locomotives, tenders, and appurtenances that are properly included in Sections A and B also.
12. SECTION F.—This section should be confined to injuries to employees on duty that resulted in incapacity beyond day or shift of accident, but for not more than 3 days in the aggregate within the 10-day period immediately following the accident, and should not include injuries reportable under the 1922 book of rules.

Form T (SEE INSTRUCTIONS ON REVERSE OF SHEET) 5772 12—1923

3991

INSTRUCTIONS REGARDING ENTRIES ON FACE OF THIS SHEET

(References are to sections of the Commission's Rules governing Monthly Reports of Railway Accidents, 1922 Revision)

1. The significant words in the name of the reporting carrier should be given in full, so far as practicable.

2 and 3. Concerning train accidents occurring on terminal or other track operated jointly or in common, or classifiable as crossing collisions, see, respectively, sections 5, 5*a*, and 5*b*, and 8 (*e*) and (*f*) of Rules.

4. Enter the number of the accident as recorded in the carrier's operating records.

5. Enter the name of the operating division on which the accident occurred.

6. State the day of the month.

7. State the time o'clock in hours and minutes, a.m. or p.m.

8. Enter a capital letter to indicate the class (see section 20 of the Rules) and a small letter to indicate the subclass (see sections 8 to 13).

9. The customary abbreviation for the name of a State may be used.

10. Give the name of the station nearest to the place where the accident occurred (or was first discovered) and indicate whether it occurred on main track, or on yard track or sidings. This information should be given both for train accidents and train-service accidents. Main tracks within yards are not to be regarded as yard tracks. Sidings not used exclusively as passing tracks are to be regarded as yards. See section 25 of Rules.

11. The giving of the number of the milepost nearest to the place of the accident is optional; and instead of giving it in the case of either a train or a train-service accident, if the accident occurred at a station, that fact should be stated, or, if it occurred within a yard, the name or description of the yard should be given.

12. Distance, estimated in miles or rods, should be given when appropriate.

18. Show the kind of train, as freight, passenger, work, switching, etc. If light engine, state to what class of service assigned. See section 26 of Rules.

20. Give the time-table direction.

21. Give the estimated speed in miles per hour.

22. In case of a collision, show whether trains were operated under a block system at point of accident, stating specifically what method of blocking, if any, was employed.

23. Give number of main tracks in use in locality of accident.

24. (*b*) See section 31 of Rules.

24. (*c*) See section 30 of Rules.

25. State the amount of damage to equipment (including damage to foreign cars), to other railway property, and cost of clearing wreck, with the total amount as provided. In case of a "joint-operation" accident, figures for the several items should be given for *each road involved*, the name of which should be clearly indicated. If no other road is involved, respondent may make the requisite entries on "Total" line only. See section 29 of Rules.

26. For information in general pertinent to the matter of returns, see sections 1 to 13, 17, 20, and 22 to 31 of Rules. If the space afforded on Form T is insufficient for *all* the requisite entries concerning a particular accident, blank sheets of like size, suitably identified and completed, may be attached to a single Form T containing the introductory details applicable to the accident as a whole.

Revision

INTERSTATE COMMERCE COMMISSION
Bureau of Statistics

Supplement to
T sheet No.____.
_____, 19
(Month)

MONTHLY REPORT OF ACCIDENTS AT PUBLIC HIGHWAY GRADE CROSSINGS

Name of carrier _____

Date of accident _____. Nearest station _____

A report on this form must accompany each Form T sheet carrying the symbols D-f, M-a, or S-h, in item (8). (Refer to section 9 (f), page 17; section 12 (a), page 19; section 13 (h), page 21; and section 20, page 23 of Rules Governing Monthly Reports of Railway accidents - 1922 Revision.)

1. Type of accident:

(a) Person, vehicle, or object involved _____
(b) Type of vehicle _____
(b1) Struck by train _____; (b2) Ran into side of train _____

2. Part of train struck (if ran into side of train) _____

3. Crossing protection at time of accident:

(a) Type of protection _____
(b) Operation - Automatic _____; Manual _____; Other _____.
(c) Located on - Both sides of crossing _____; Side from which vehicle approached _____; Side opposite _____.
(d) State any factor impairing effective operation _____
_____

4. State whether view of crossing was obscured by buildings, trees, cars, or other objects _____

5. Night accidents (one-half hour after sunset to one-half hour before sunrise.)

Crossing illuminated - (Yes or No) _____

6. Estimated speed of vehicle's approach _____ State also if

(a) Stalled on crossing _____; (b) Stopped on crossing _____

7. If vehicle subject to Motor Carrier Act, 1935, state name and address of the operating company (or ICC plate number if obtained) _____
_____
_____

MONTHLY REPORT OF RAILWAY ACCIDENTS.

Sheet No..... **R**

Name of reporting carrier.....

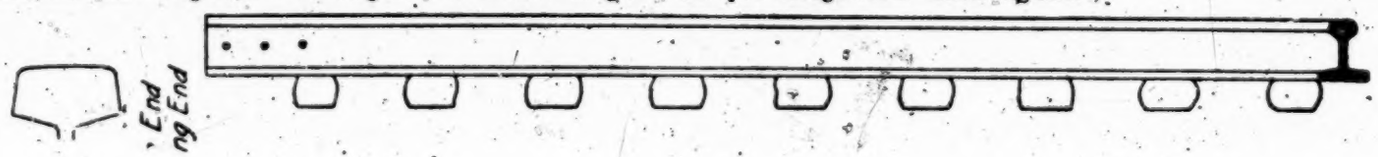
Report to the Interstate Commerce Commission for the month of ....., 193

Date of accident ....., as reported on Form T, Sheet No. .....

Report of rail failure on the ..... Division. Section No..... Nearest Station .....

1. Weight per yard—new.....pounds; rerolled.....pounds.
2. Rail section.....
3. Brand on rail.....
4. Heat No. on rail.....
5. Rail No. or letter.....
6. Original length of rail.....
7. Month and year rail was laid.....
8. Location.....feet .....of mile-post .....
9. Which track?..... Which rail?.....
10. On curve or straight line?.....
11. Degree of curve.....
12. High or low rail, if on curve .....
13. Superelevation of curve at break.....
14a. Was rail broken?.....
14b. Was rail damaged?.....
14c. Was rail defective?.....
15. Was rail much or little worn?.....
16. By whom discovered?.....
17. Date and time found.....
18. Was rail removed?.....
19. If removed, give date.....
20. Exact gage of track at break .....
21. Was break over or between ties?.....
22. Was break square or angular?.....
23. Distance between edges of ties at break.....
24. Condition of ties each side of break.....
25. Kind of ties .....
26. Were tie plates used?..... Kind?.....
27. Condition of line and surface.....
28. Kind of ballast.....
29. Was track properly ballasted?.....
30. Kind of material in roadbed under ballast.....
31. Was track well drained?.....
32. Was roadbed frozen?.....
33. Condition of weather (wet, dry, warm or cold, freezing or thawing).....
34a. If break was at joint, state kind, number of holes, and whether it was full-bolted or insulated.....
.....
34b. Were any bolts at joint loose?..... If so, how many?.....
35. If broken, state cause of break and describe any flaws found at point of break.....
.....
36. If previously damaged, describe nature and cause of damage, if known.....
.....
37. If defective, describe location of flaws or defects, and, if possible, what caused them.....
.....
.....
.....
.....
.....
.....

38. Draw on diagram lines of break, or partial fracture, such as long pieces from side of head and half-moon pieces from base, showing dimensions. Hollows in head should be shown on end section. Defects may also be indicated on diagram. Mark distance from end to break. (*If break is nearest receiving end, draw pen through words "Leaving end;" if nearest leaving end, draw pen through words "Receiving end.")



1. Weight per yard—new.....pounds; rerolled.....pounds.
2. Rail section.....
3. Brand on rail.....
4. Heat No. on rail.....
5. Rail No. or letter.....
6. Original length of rail.....
7. Month and year rail was laid.....
8. Location.....feet.....of mile-post.....
9. Which track?..... Which rail?.....
10. On curve or straight line?.....
11. Degree of curve.....
12. High or low rail, if on curve.....
13. Superelevation of curve at break.....
14a. Was rail broken?.....
14b. Was rail damaged?.....
14c. Was rail defective?.....
15. Was rail much or little worn?.....
16. By whom discovered?.....
17. Date and time found.....
18. Was rail removed?.....
19. If removed, give date.....
20. Exact gage of track at break.....
21. Was break over or between ties?.....
22. Was break square or angular?.....
23. Distance between edges of ties at break.....
24. Condition of ties each side of break.....
25. Kind of ties.....
26. Were tie plates used?..... Kind?.....
27. Condition of line and surface.....
28. Kind of ballast.....
29. Was track properly ballasted?.....
30. Kind of material in roadbed under ballast.....
31. Was track well drained?.....
32. Was roadbed frozen?.....
33. Condition of weather (wet, dry, warm or cold, freezing or thawing).....
34a. If break was at joint, state kind, number of holes, and whether it was full-bolted or insulated.....

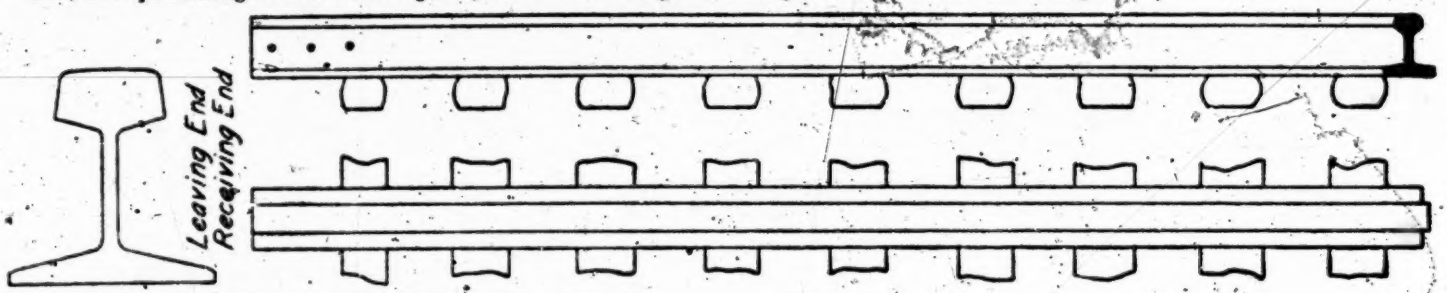
35. If broken, state cause of break and describe any flaws found at point of break.....
36. If previously damaged, describe nature and cause of damage, if known.....
37. If defective, describe location of flaws or defects, and, if possible, what caused them.....
38. Draw on diagram lines of break, or partial fracture, such as long pieces from side of head and half-moon pieces from base, showing dimensions. Hollows in head should be shown on end section. Defects may also be indicated on diagram. Mark distance from end to break. (*If break is nearest receiving end, draw pen through words "Leaving end;" if nearest leaving end, draw pen through words "Receiving end.")



39. State any other important circumstances pertaining to failure.....

(Signature)..... (Title).....

*Applies only to track upon which the current of traffic is in one direction.

(over.)

INSTRUCTIONS.

In the description on Form R of failures of rails resulting in accidents, reported on Form T in accordance with the Commission's rules governing Monthly Reports of Railway Accidents (see sections 17, 18, and 28), the following terms should be used:

1. *Broken rail.*—This term is to be confined to a rail which is either broken through, separating it into two or more parts, or contains a crack which might result in a complete break. Mention transverse fissures specifically, when they occur.

2. *Flow of metal.*—This term means a "rolling out" of the metal on top of the head toward its sides without there being any indication of a breaking down of the head structure; that is, the underside of the head is not distorted.

3. *Crushed head.*—This term is used to indicate a "flattening" of the head, and is usually accompanied by a crushing down of the head.

4. *Split head.*—This term includes rails split through or near the center line of the head or rails with pieces split off the side of the head. When this term is used it should be further defined by stating whether it is or is not accompanied by a seam or hollow head. State also the length of the split or seam.

5. *Split web.*—This term is a longitudinal split along the axis of the web generally starting from the end of the rail through the bolt holes. State whether fracture passed across a bolt hole or in other parts of the web.

6. *Broken base.*—This term covers all breaks in base of rail and should be described and illustrated on the sketches provided for. Mention seams lengthwise the rail when they occur.

7. *Miscellaneous causes.*—This term is intended to cover all failures of rails reportable on Form R not includable in the preceding classes.

12—1908

MONTHLY REPORT OF RAILWAY ACCIDENTS—SUBSEQUENT FATALITIES. Sheet No. F

Name of reporting carrier. _____ Report to the Interstate Commerce Commission for the month of _____, 19____

MEMORANDUM OF FATALITIES DEVELOPED FROM PREVIOUSLY REPORTED INJURIES.

If as the result of an injury, reported on Form T, a person dies more than twenty-four hours after the occurrence of the accident in which it was received, a memorandum containing significant particulars of the death should be given on Form F, which should be rendered in connection with the report for the month in which the accident occurred, if practicable; otherwise it should separately accompany the first monthly report filed after the death has come to the knowledge of the carrier. A single Form F may contain reports of more than one such fatality, provided all persons included therein were injured during the same month. No statements are expected in similar cases due to nontrain accidents. (See Section 19 of the Commission's Rules governing Monthly Reports of Railway Accidents, 1918 Revision.)

Line No.	Name and address of person (a).	Place of death (b).	Date of death (c).	Particulars of accident from which death resulted.		
				Class (d).	Date (e).	Place (f).

ACCIDENT REPORTS ACT.

AN ACT REQUIRING COMMON CARRIERS ENGAGED IN INTERSTATE AND FOREIGN COMMERCE TO MAKE FULL REPORTS OF ALL ACCIDENTS TO THE INTERSTATE COMMERCE COMMISSION, AND AUTHORIZING INVESTIGATIONS THEREOF BY SAID COMMISSION.

BE IT ENACTED BY THE SENATE AND HOUSE OF REPRESENTATIVES OF THE UNITED STATES OF AMERICA IN CONGRESS ASSEMBLED, That it shall be the duty of the general manager, superintendent, or other proper officer of every common carrier engaged in interstate or foreign commerce by railroad to make to the Interstate Commerce Commission, at its office in Washington, District of Columbia, a monthly report under oath, of all collisions, derailments, or other accidents resulting in injury to persons, equipment, or roadbed arising from the operation of such railroad under such rules and regulations as may be prescribed by the said commission, which report shall state the nature and causes thereof and the circumstances connected therewith: PROVIDED, That hereafter all said carriers shall be relieved from the duty of reporting accidents in their annual financial and operating reports made to the commission.

SEC. 2. That any common carrier failing to make such report within thirty days after the end of any month shall be deemed guilty of a misdemeanor, and upon conviction thereof by a court of competent jurisdiction shall be punished by a fine of not more than one hundred dollars for each and every offense and for every day during which it shall fail to make such report after the time herein specified for making the same.

SEC. 3. That the Interstate Commerce Commission shall have authority to investigate all collisions, derailments, or other accidents resulting in serious injury to person or to the property of a railroad occurring on the line of any common carrier engaged in interstate or foreign commerce by railroad. The commission, or any impartial investigator thereunto authorized by said commission, shall have authority to investigate such collisions, derailments, or other accidents aforesaid, and all the attending facts, conditions, and circumstances, and for that purpose may subpoena witnesses, administer oaths, take testimony, and require the production of books, papers, orders, memoranda, exhibits, and other evidence, and shall be provided by said carriers with all reasonable facilities: PROVIDED, That when such accident is investigated by a commission of the State in which it occurred, the Interstate Commerce Commission shall, if convenient, make any investigation it may have previously determined upon, at the same time as, and in connection with, the State commission investigation. Said commission shall, when it deems it to the public interest, make reports of such investigations, stating the cause of accident, together with such recommendations as it deems proper. Such reports shall be made public in such manner as the commission deems proper.

SEC. 4. That neither said report not any report of said investigation nor any part thereof shall be admitted as evidence or used for any purpose in any suit or action for damages growing out of any matter mentioned in said report or investigation.

SEC. 5. That the Interstate Commerce Commission is authorized to prescribe for such common carriers a method and form for making the reports hereinbefore provided.

SEC. 6. That the Act entitled "An Act requiring common carriers engaged in interstate commerce to make full reports of all accidents to the Interstate Commerce Commission," approved March third, nineteen hundred and one, is hereby repealed.

SEC. 7. That the term "interstate commerce," as used in this Act, shall include transportation from any State or Territory or the District of Columbia to any other State or Territory or the District of Columbia, and the term "foreign commerce," as used in this Act, shall include transportation from any State or Territory or the District of Columbia to any foreign country and from any foreign country to any State or Territory or the District of Columbia.

SEC. 8. That this Act shall take effect sixty days after its passage.

Public, No. 165, approved May 6, 1910.

ORDER

At a Session of the INTERSTATE COMMERCE COMMISSION, Division 6, held at its office in Washington, D.C., on the 8th day of December, A.D., 1928

IN THE MATTER OF REQUIRING COMMON CARRIERS BY RAILROAD ENGAGED IN INTERSTATE OR FOREIGN COMMERCE, TO MAKE SPECIAL REPORTS BY TELEGRAM OF ACCIDENTS CAUSING DEATH OR INJURY TO ONE OR MORE PERSONS.

"The commission having under further consideration the matter of informing itself as to the advisability, in particular cases, of investigating "collisions, derailments, or other accidents resulting in serious injury to persons" occurring on the line of any common carrier engaged in interstate or foreign commerce by railroad, as authorized by Section 3 of the Act of May 6, 1910, and pursuant to the provisions of Section 20 of the interstate commerce act:

It is ordered, That the requirements of the order of the commission of June 21, 1911, be modified to read as follows:

It is ordered, That on and after January 1, 1929, every common carrier engaged in interstate or foreign commerce by railroad shall by its general manager, superintendent, or other proper officer immediately after the occurrence thereof, report by telegram to the Interstate Commerce Commission, at its office in Washington, D.C., any collision or derailment upon the railroad operated by such common carrier resulting in the death or serious injury of one or more persons, including any collision with a motor vehicle at a grade crossing resulting in the death or serious injury of any passenger, employee, or other person riding on the train involved in any such collision.

It is further ordered, That the words "serious injury" as used in the preceding paragraph of this order shall mean "an injury to any person sufficient, in the opinion of the reporting officer, to incapacitate the injured person from following his customary vocation or mode of life for a period of more than three days in the aggregate during the ten days immediately following the accident."

By the commission, division 6.

GEORGE B McGINTY,

Secretary.

(SEAL)

DETAIL OF CAUSE
AS ASSIGNED BY INTERSTATE COMMERCE COMMISSION, BUREAU OF SAFETY,
FOR ACCIDENT, NUMBER OF CASUALTIES AND NUMBER OF TRAINS INVOLVED,
BY VARIOUS LENGTHS

	I.C.C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS KILLED	PERSONS INJURED	NUMBER OF FREIGHT TRAINS INVOLVED AS TO VARIOUS LENGTHS IN CARS, EXCLUSIVE OF CABOOS: 40 AND LESS	41 TO 50	51 TO 60	61 TO 70	71 TO 80	81 TO 90	91 TO 100	OVER 100

I. NEGLIGENCE OF EMPLOYES:												
(A) Train Orders:												
1. Failure of the engineman of the passenger train to obey a meet order	1414	1	1	21	1							
2. Failure to obey a wait order, for which the engineman, fireman and conductor of one of the trains were responsible	1426	1		4			1			1		
3. Failure to obey a meet order, for which the engineman and the conductor of the freight train were primarily responsible	1448	1	1	10			1					
4. Failure to obey a wait order, for which the motorman and conductor of a passenger train were responsible	1465	1	2	63	1							
5. Failure of an operator to deliver a wait order and by his failure to secure the block before permitting one of the trains to enter the block	1469	1	4	3	2							
6. Failure to remember a meet order, for which the entire crew of the freight train was responsible, with the exception of the middle trakeman; the latter was at fault for his failure to make himself acquainted with the contents of the orders held by his train	1478	1		4	1							
7. Failure to obey a wait order, for which the entire crew of a passenger train was responsible	1486	1	6		1							
8. Failure to obey a meet order, for which the entire crew of a passenger train was responsible	1501	1	3	38	1							
9. Failure to obey a wait order, for which the engineman, fireman and head brakeman of one of the trains were responsible	1507	1		4	2							
10. Failure of the motorman and conductor of one of the trains to stop at a siding specified by train order, and obtain further orders before proceeding beyond that point	1557	1	1	5	2							
11. Failure to obey a wait order, for which the entire crew of one of the trains was responsible	1566	1	2	6	2							
12. Failure of the road foreman of engines who was acting as engineman of the following train, to read all of the train orders affecting the movement of his train	1581	1		3	1		1					
13. Failure of the signalman on duty to deliver a train order	1593	1	2	4	1	1						
14. Failure of the engineman of the passenger train to obey a train order establishing a meeting point	1645	1		8	1							
15. Failure to obey a meet order, for which the motorman of the passenger train was responsible	1677	1	1	4	1							
16. Caused by the engineman and the fireman of the light engine misreading a wait order	1701	1	1	2				1				
17. Failure of a conductor to deliver a meet order to his engineman	1760	1		4	1	1						
18. Failure to obey a meet order, for which the conductor-motorman of a passenger train was responsible	1770	1	9	5	1							
19. Lap order	1778	1	2	3	2							
20. Failure of an operator to copy that portion of a train order which directed a train superior by direction to take siding at a meeting point with an opposing train	1793	1	4	2	1							1
21. Failure of the engineman of a passenger train properly to obey a meet order	1799	1		16		1						
22. Failure of an agent-operator to deliver a meet order	1846	1		2	2							
23. Failure to obey a wait order	1883	1		4	2							
24. Failure to obey a wait order	1889	1		2	2							
25. Failure to obey a meet order	1900	1	2	4	1							
26. Failure to obey a meet order	1914	1	2	1	1			1				
27. Failure to obey a meet order	1944	1		3	1							
28. Failure of an operator to delivery a copy of a meet order	1970	1		9	2							
29. Action of the dispatcher in annulling a train order to an inferior train without first annulling it to the superior train; the operator failed to hold the superior train in accordance with verbal instructions received from the dispatcher	1980	1		3		1		1				
[illegible] the failure of the fireman and the head brakeman properly to check

I. NEGLIGENCE OF EMPLOYES:							
(A) Train Orders:							
1. Failure of the engineman of the passenger train to obey a meet order	1414	1	1	21	1		
2. Failure to obey a wait order, for which the engineman, fireman and conductor of one of the trains were responsible	1426	1		4			1
3. Failure to obey a meet order, for which the engineman and the conductor of the freight train were primarily responsible	1448	1	1	10			1
4. Failure to obey a wait order, for which the motorman and conductor of a passenger train were responsible	1465	1	2	63	1		
5. Failure of an operator to deliver a wait order and by his failure to secure the block before permitting one of the trains to enter the block	1469	1	4	3	2		
6. Failure to remember a meet order, for which the entire crew of the freight train was responsible, with the exception of the middle brakeman; the latter was at fault for his failure to make himself acquainted with the contents of the orders held by his train	1478	1		4	1		
7. Failure to obey a wait order, for which the entire crew of a passenger train was responsible	1486	1	6		1		
8. Failure to obey a meet order, for which the entire crew of a passenger train was responsible	1501	1	3	38	1		
9. Failure to obey a wait order, for which the engineman, fireman and head brakeman of one of the trains were responsible	1507	1		4	2		
10. Failure of the motorman and conductor of one of the trains to stop at a siding specified by train order, and obtain further orders before proceeding beyond that point	1557	1	1	5	2		
11. Failure to obey a wait order, for which the entire crew of one of the trains was responsible	1566	1	2	6	2		
12. Failure of the road foreman of engines who was acting as engineman of the following train, to read all of the train orders affecting the movement of his train	1581	1		3	1		1
13. Failure of the signalman on duty to deliver a train order	1593	1	2	4	1	1	
14. Failure of the engineman of the passenger train to obey a train order establishing a meeting point	1645	1		8	1		
15. Failure to obey a meet order, for which the motorman of the passenger train was responsible	1677	1	1	4	1		
16. Caused by the engineman and the fireman of the light engine misreading a wait order	1701	1	1	2			
17. Failure of a conductor to deliver a meet order to his engineman	1760	1		4	1	1	
18. Failure to obey a meet order, for which the conductor-motorman of a passenger train was responsible	1770	1	9	5	1		
19. Lap order	1778	1	2	3	2		
20. Failure of an operator to copy that portion of a train order which directed a train superior by direction to take siding at a meeting point with an opposing train	1793	1	4	2	2		
21. Failure of the engineman of a passenger train properly to obey a meet order	1799	1		16		1	
22. Failure of an agent-operator to deliver a meet order	1846	1		2	2		
23. Failure to obey a wait order	1880	1		4	2		
24. Failure to obey a wait order	1889	1		2	2		
25. Failure to obey a meet order	1900	1	2	4	1		
26. Failure to obey a meet order	1914	1	2	1	1		
27. Failure to obey a meet order	1944	1		3	1		
28. Failure of an operator to delivery a copy of a meet order	1970	1		9	2		
29. Action of the dispatcher in annulling a train order to an inferior train without first annulling it to the superior train; the operator failed to hold the superior train in accordance with verbal instructions received from the dispatcher	1980	1		3		1	
30. Failure to obey a meet order, due to the engineman falling asleep and the failure of the fireman and the head brakeman properly to check the movement of their train when approaching the meeting point	2009	1		3			
31. Failure to obey a meet order	2032	1	3	3	2		
32. Failure to obey a meet order	2107	1		18	1		
33. Primarily by failure to obey a wait order	2111	1	4	6	2		
34. Failure to comply with a meet order, due to failure to identify an opposing train at the meeting point	2126	1	5	6	1		
35. Failure of an operator properly to copy a train order; a contributing cause was the failure of Extra 4582 properly to clear the train-order waiting time of the superior train	2235	1	2	2	1	1

9. Failure to provide proper flag protection for a movement against the current of traffic, for which the conductor and the flagman of the light engine were responsible	1996	1		2	1				
10. Failure of the flagman of the first train to provide proper flag protection, and the failure of the conductor of that train to take proper precautions for the safety of his train	1999	1		5	1	1			
11. Failure to provide proper flag protection when making a back-up movement on the main track for which the conductor and the flagman of the work train were responsible	1612	1		2		1			
12. Failure to provide proper flag protection when standing on the main track at the time of a following superior train	1619	1	1						
13. Failure to provide proper flag protection for which the conductor and the flagman of the freight train were responsible	1642	1		20	1				
14. Failure to provide proper flag protection for which the conductor and the flagman of the freight train were responsible	1649	1	1	1					1
15. Failure of the flagman of the freight train properly to protect his train by flag	1672	1		42	1				
16. Failure of the flagman of the first train properly to afford protection	1676	1	1	3	1				
17. Freight train occupying the main track beyond the meeting point without flag protection for which the engineman was primarily responsible	1710	1		2		1			
18. Failure of a flagman to provide adequate flag protection	1745	1	1	5		1		1	
19. Failure of a conductor to provide flag protection	1773	1	1	3	1			1	
20. Failure of a flagman to provide proper flag protection	1775	1	1	2					
21. Failure of the rear brakeman and the conductor of the freight train to provide proper flag protection when standing on the main track at the time of a following superior train	1863	1		3	1				
22. Failure of the conductor and the flagman of the relief train properly to protect their train	1899	1	1	6		1			
23. Failure of a conductor and a flagman to provide proper protection	1861	1	1		2				
24. Failure of the conductor and the flagman of the extra train to provide proper flag protection	2015	1	4	3	2

Sheet

	I. C. C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS KILLED	PERSONS INJURED	NUMBER OF FREIGHT TRAINS INVOLVED AS TO TRAILING TONNAGE IN CARS, EXCLUSIVE OF CABOOSE: 45 AND LESS	46 TO 50	51 TO 60	61 TO 70	71 TO 80	81 TO 90	91 TO 100	OVER 100
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)	(12)
I. NEGLIGENCE OF EMPLOYES:												
(D) Train Flagging: (Continued)												
25. Failure to provide flag protection	2122	1	2	2	2							
26. Failure of the crew of the helper engine to provide adequate flag protection	2080	1	2	1	1	1						
27. Failure properly to protect a movement from a siding to the main track	2131	1	2	1	1		1					
28. Extra 3095 occupying the main track on the time of a first-class train without proper flag protection	2142	1	2	34						1		
29. Failure to protect the snow plow train by flag	2151	1	1	2	1							
30. Failure properly to protect a movement from a siding to the main track	2161	1	2	1	2							
31. Failure of the crew of Extra 1554 properly to protect their train while making a cross-over movement on time of a first-class train	2203	1	1	5						1		
32. Failure of a second-class train to provide flag protection when occupying the main track on the time of a first-class train	2259	1	2	10							1	
33. Work extra making a movement within working limits without proper flag protection	2282	1		1	1							
34. Unauthorized main-track movement of No. 99 without flag protection	2300	1		2	2							
35. Failure of the crew of the preceding train to provide adequate flag protection	2304	1		4	2							
36. Failure to provide adequate flag protection after having failed to clear the time of a first-class train	2365	1		28	1							
TOTAL - NEGLIGENCE - TRAIN FLAGGING		36	34	218	30	6	1	4	2	7	2	1
(E) Hand Brakes:												
1. Failure to set the brakes on cars left standing on a grade, for which the rear brakeman was primarily at fault	1536	1	1		1							
2. Failure to apply a sufficient number of hand brakes to hold the cars left standing on a descending grade while the engine was uncoupled from the train to take water	1951	1		2		1						
3. Failure to set brakes on the detached portion of a train left standing on a grade	2130	1	1	1				1				
4. Failure to apply hand brakes on cars left standing on a grade	2149	1	1	1	1							
5. Failure to apply a sufficient number of hand brakes to hold 2 cut of cars left standing on a descending grade	2228	1	1		1							
6. Failure to apply a sufficient number of hand brakes to secure cars left on a yard track on a descending grade	2377	1		9	1							
TOTAL - NEGLIGENCE - HAND BRAKES		6	4	13	4	1		1				
(F) Switches:												
1. Open switch, for which a head brakeman was responsible	1512	1		3	1			1				
2. Open switch	1540	1		3	2							
3. Open switch for which the head brakeman of the freight train was primarily responsible	1743	1	2	7			1					
4. Open switch	1551	1	3	22						1		
5. Open switch	1608	1	1		1							
6. Open switch	1683	1	1	2	1

9. Failure of an engineman to operate under proper control within yard limits	1562	1		1			1		1			
10. Failure of an engineman to operate under proper control within yard limits	1614	1	1				1		1			
11. Failure of the engineman of the freight train to have his train under proper control when approaching yard limits	1600	1	1	1	1							
12. Failure of the engineman of the light engine to operate under proper control within yard limits and by failure of the fireman to give the engineman correct information regarding the track ahead	1610	1	3		1							
13. Failure of an engineman properly to control his train within yard limits	1643	1		3	1		1					
14. Failure of the engineman of the following train to have his train under proper control when approaching yard limits	1654	1	2	4	1		1					
15. Failure to operate under proper control within yard limits, for which a brakeman, and the engineman of one of the trains were responsible	1733	1	1		2							
16. Failure of an engineman to operate his train under control within yard limits	1783	1	1	1	2							
17. Failure of an engineman to operate his train under control within yard limits	1786	1		2	2							
18. Primarily by the failure of the freight train to operate under proper control within yard limits	1952	1	3			1						
19. Failure to operate under proper control in an occupied block for which the engineman of the express train was responsible	1624	1		4			1					
20. Primarily by the following train being operated at a speed which was excessive in view of existing weather conditions	1555	1	2	2	1			1				
21. Failure of the engineman properly to control the speed of his train	1990	1		9			1					
22. Believed to have been due to a rate of speed which was materially in excess of the speed restrictions on the curve involved for the type of engine in use	1992	1	1	1		1						
23. Failure of the engineman properly to control the speed of his train on a heavy descending grade	1606	1	2	1	1							
24. Failure of the engineman of the following train properly to control the speed of his train on a descending grade	1639	1		3		1		1				
25. Excessive speed on a sharp curve	1723	1	2	5	1							
26. Excessive speed on a sharp curve	1911	1	1	4	1							
27. Believed to have been caused primarily by excessive speed	1780	1	1	12	1							
28. Failure of the conductor of the passenger train properly to control the speed of his train during a back-up movement	1916	1	1					1				
29. Crew of the freight train overlooking the passenger train	1400	1	2	5	1							
30. Freight train being operated on short time against an opposing superior train	1438	1	1	21	1							
31. Failure of an extra train to clear the time of a first class train, for which the entire crew was responsible	1462	1	3	45	1							
32. An extra train being operated against an opposing superior train on short time for which the conductor and engineman were responsible	1513	1	3	2	2							
33. Engineman and the fireman of the light engine in overlooking an opposing superior train	1531	1		2		1						
34. One of the trains being operated against a superior train on short time, for which the conductor and the engineman were responsible	1576	1		2				2				
35. Crew of the work train overlooking a superior train, and their failure to get into clear for a superior train as required by the rules	1578	1	1	1								
36. Freight train being operated against an opposing passenger train on short time for which the conductor and engineman were responsible	1616	1	1	19	1							
37. Overlooking a schedule of an opposing superior train, for which the entire crew of the inferior train was responsible	1621	1		5	2							
38. Believed to have been caused by the operation of the train with the engine running backwards, at an excessive rate of speed for which the engineman and the conductor were responsible	1634	1	3	3	1							
39. Operation of the freight train on short time against an opposing superior train	1635	1	1	17	1			1				
[illegible] of the engineman of the passenger train properly to control the speed of his train approaching a meeting point	1692	1		20	1

	I. C. C. Investigation Number	Number of Accidents	Persons Killed	Persons Injured	Number of Persons Varying Lengths of Time: 40 and less	41 to 90	91 to 60	61 to 70
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
I. NEGLIGENCE OF EMPLOYEES:								
(g) Other Forms of Negligence of Employes: (Continued)								
46. A crew of an inferior train overlooking the schedule of an opposing superior train	1925	1	1	15	1			
47. Freight train occupying the main track on the time of a first class train without authority for which the engineer was primarily responsible; the fireman and head brakeman were partly responsible for having also overlooked the superior train	1712	1	1	11				
48. Failure of the motorman of the passenger train properly to control the speed of his train approaching a passing point	1539	1		61	1			
49. Failure of the engineman of the freight train to bring his train to a stop on a siding before it fouled the main track	1441	1	1	16				
50. Freight train fouling the main track directly in front of the passenger train, an overdue superior train, for which the conductor and the engineman of the freight train were responsible	1482	1	2	12	1			
51. Light engine fouling main track directly in front of an approaching train, for which the fireman and head brakeman were responsible	1689	1	1			1		
52. Action of the engineman of the passenger train in pulling out of a depot track without receiving the proper signal from a switch tender and fouling the westbound main track which was then occupied by the freight train	1796	1		1	1			
53. Light engine fouling the main track directly in front of an approaching freight train	1942	1	4	1				
54. Light engines being operated against the current of traffic without authority and without protection, for which both engine crews were responsible	1560	1	2	6				
55. An extra being operated against the first section of an opposing superior train without authority, for which the engineman and conductor were responsible	1656	1	7	1		2		
56. Failure of the engineman of the following train to operate his train under proper control and by the failure of the conductor and the flagman of the preceding train properly to protect the rear of their train	1416	1	1			1		1
57. Failure of the flagman of the freight train properly to protect the rear of his train and by the failure of an operator to issue a caution card to the passenger train before allowing it to enter an occupied block	1436	1	1	1			1	
58. Failure of the engineman of the following train properly to observe and obey the stop indication of an automatic signal, and by the failure of the conductor of the preceding train properly to protect the rear of his train	1468	1	1				1	
59. Failure of the conductor and a flagman to provide proper flag protection; a contributing cause was the failure of an engineman properly to control the speed of his train when operating under a permissive block signal indication	1558	1	2	1	1		1	
60. Failure of the flagman of the freight train to provide proper flag protection; a contributing cause was the failure of the engineman of the passenger train properly to control the speed of his train when holding an order authorizing a second class train to run ahead of his	1577	1		68				
61. Failure of the conductor of the first train to provide proper flag protection and by the failure of the engineman of the following train to reduce speed in accordance with indications displayed by interlocking approach and home signals	1736	1	1	2	1			
62. Failure of the flagman of the freight train to provide proper flag protection, and by the failure of the motorman of the passenger train to operate his train under proper control in an occupied block	1777	1	1	6				
63. Caused primarily by the failure of all concerned to provide adequate flag protection against the passenger train; by the failure of the engineman of the freight train properly to observe and obey the stop indication of an absolute signal, and by the failure of the engineman of the passenger train properly to observe and obey the caution indication of an intermediate signal	1787	1	5	19		1		
64. Failure of an engineman to operate his train at restricted speed while running in an occupied block, and by the failure of a conductor and flagman to provide proper flag protection	1868	1		1	1			1
65. Primarily by the failure of the engineman of the freight train properly to control the speed of his train when running in an occupied block under a permissive signal indication; a contributing cause was the failure of the engineman and flagman of the work train to provide proper flag protection for their train	1949	1	2	12	1			
66. Failure of an engineman properly to control the speed of his train when running under a permissive signal in an occupied block under weather conditions which materially restricted his range of vision	1849	1		1				
67. Failure of an engineman properly to obey signal indications, and by the failure of a flagman to provide full flag protection	1955	1		1	1		1	
68. Failure of the conductor and the flagman of first train properly to protect by flag; a contributing cause was the failure of the engineman of the following train to approach yard limits under proper control in view of existing weather conditions	1406	1	2				2	
69. Failure of the engineman of the following train to operate his train under proper control within yard limits and also by his failure properly to obey stop indication

53. Light engine fouling the main track directly in front of an approaching freight train	1942	1	4	1					
54. Light engines being operated against the current of traffic without authority and without projection, for which both engine crews were responsible	1560	1	2	6					1
55. An extra being operated against the first section of an opposing superior train without authority, for which the engineman and conductor were responsible	1656	1	7	1		2			
56. Failure of the engineman of the following train to operate his train under proper control and by the failure of the conductor and the flagman of the preceding train properly to protect the rear of their train	1416	1	1			1		1	
57. Failure of the flagman of the freight train properly to protect the rear of his train and by the failure of an operator to issue a caution card to the passenger train before allowing it to enter an occupied block	1436	1	1	1			1		
58. Failure of the engineman of the following train properly to observe and obey the stop indication of an automatic signal, and by the failure of the conductor of the preceding train properly to protect the rear of his train	1468	1	1				1		1
59. Failure of the conductor and a flagman to provide proper flag protection; a contributing cause was the failure of an engineman properly to control the speed of his train when operating under a permissive block signal indication	1558	1	2	1	1		1		
60. Failure of the flagman of the freight train to provide proper flag protection; a contributing cause was the failure of the engineman of the passenger train properly to control the speed of his train when holding an order authorizing a second class train to run ahead of him	1577	1		68					1
61. Failure of the conductor of the first train to provide proper flag protection and by the failure of the engineman of the following train to reduce speed in accordance with indications displayed by interlocking approach and home signals	1736	1	1	2	1				
62. Failure of the flagman of the freight train to provide proper flag protection, and by the failure of the motorman of the passenger train to operate his train under proper control in an occupied block	1777	1	1	6					
63. Caused primarily by the failure of all concerned to provide adequate flag protection against the passenger train; by the failure of the engineman of the freight train properly to observe and obey the stop indication of an absolute signal, and by the failure of the engineman of the passenger train properly to observe and obey the caution indication of an intermediate signal	1787	1	5	19		1			
64. Failure of an engineman to operate his train at restricted speed while running in an occupied block, and by the failure of a conductor and flagman to provide proper flag protection	1868	1		1	1			1	
65. Primarily by the failure of the engineman of the freight train properly to control the speed of his train when running in an occupied block under a permissive signal indication; a contributing cause was the failure of the engineman and flagman of the work train to provide proper flag protection for their train	1949	1	2	12	1				
66. Failure of an engineman properly to control the speed of his train when running under a permissive signal in an occupied block under weather conditions which materially restricted his range of vision	1849	1		1					
67. Failure of an engineman properly to obey signal indications, and by the failure of a flagman to provide full flag protection	1955	1		1	1		1		
68. Failure of the conductor and the flagman of first train properly to protect by flag; a contributing cause was the failure of the engineman of the following train to approach yard limits under proper control in view of existing weather conditions	1406	1	2				2		
69. Failure of the engineman of the following train to operate his train under proper control within yard limits and also by his failure properly to obey stop indication displayed by a block signal	1442	1	1	5			1	1	
70. Failure of the engineman of the following train properly to obey signal indications and by his failure to operate his train under proper control within yard limits	1449	1	1	1	1				1
71. Failure of the crew of the yard engine to provide flag protection and by the failure of the freight train to be operated under proper control within yard limits	1862	1	1	2	1				
72. Failure of the conductor of the log train properly to supervise the back-up movement being made	1473	1	2		1			1	
73. Failure properly to control a back-up movement around the wye	1855	1	1		2				
74. Failure of an engineman to have his engine under proper control when making a switching movement	1650	1	1

	I. C. C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS		VAR	
			KILLED	INJURED	40 AND LESS	4 T 5
	(1)	(2)	(3)	(4)	(5)	(6
I. NEGLIGENCE OF EMPLOYEES:						
(G) Other Forms of Negligence of Employes: (Continued)						
75. Failure to note that there was not sufficient clearance to permit the engine and cars to back past the cars which had been left on the main track	1926	1	1			
76. Yard engine being fired up with the throttle and reverse lever apparently in position that permitted the engine to start when sufficient steam pressure was generated, for which an engine watchman was responsible	1480	1		1		
77. Failure of the fireman of the following train to maintain a proper lookout and to notify the engineman that the track was occupied	1410	1	1	1	2	
78. Failure of the fireman of the light engine to maintain a proper lookout while making a back-up movement on a passing track	1564	1	1			
79. Failure of the engineman and conductor of the transfer train to maintain a proper lookout ahead and by the failure of the engineman to operate under proper control within yard limits	1674	1	1	2	2	
80. Failure of a fireman to maintain proper lookout on a curve to the left and to notify the engineman of a caboose ahead	1681	1	1	2	2	
81. Primarily by the failure of the fireman and head brakeman of extra to maintain a proper lookout when proceeding through yard limits and under a restricted speed signal indication	1813	1		1		
82. Open switch, and by the failure of anyone on the engine to observe the switch lamp indication or to maintain a proper lookout	1826	1		2	1	
83. Failure to obey a wait order for which the engineman and conductor of the passenger train were responsible. A contributing cause was the failure of the crew of the freight train properly to protect their train when running on short time against the passenger train	1439	1	3	36		
84. Failure of the engineman of the following train and the flagman of the leading train to take proper precautions for the safety of their respective trains when operating under close headway	1447	1	2	2	2	
85. Freight train occupying the main track on the time of a superior train without protection, and by the passenger train departing from a station ahead of schedule time, for which the conductors and enginemen of both trains were responsible	1457	1	3	8	1	
86. Failure to apply the power brakes and also a sufficient number of hand brakes to hold the rear portion of a train on a descending grade after the engine had been detached, the responsibility being shared by the engineer, conductor and head brakeman	1492	1	1	1	1	
87. Failure of the conductor of one of the trains properly to check a train register	1493	1		2	1	
88. Caused either by the failure of the conductor of the freight train properly to check a train register, or to errors in making an entry in the train register	1510	1	1	15		
89. Failure of the section motor car to be removed from the main track in foggy weather, or to be protected by flag, for which the section foreman was responsible	1516	1	2	2	1	
90. Cut of cars being shoved ahead on a yard track by a transfer engine without due regard for safety	1517	1	1			
91. Failure of the enginemen and firemen of the freight train properly to observe and obey the stop indications of an absolute signal, and by the further failure of the enginemen to operate his train under full control in accordance with flagging instructions	1520	1		9	1	
92. Failure of a conductor and a flagman to afford proper protection for the rear end of their train, and by the failure of a motorman to maintain a proper watch of the track ahead	1527	1	1	26		
93. Failure of a conductor to check a train register	1571	1	3	6	2	
94. A run-away freight train, due to a closed angle cock in the brake pipe at the head end of the first car behind the locomotive, and to failure to make proper air-brake tests, which would have disclosed this condition, either after the locomotives were changed or before starting down the grade on which the accident occurred	1582	1		2	2	
95. Failure of a conductor to see to it that proper protection was afforded to that portion of his train left standing on main track, and by the failure of an engineman properly to control the speed of his train approaching the depot	1597	1		3	2	
96. Failure of an engineman of the train to maintain proper lookout and to have his train under proper control within yard limits, and by th failure of the conductor to exercise proper care before attempting to back his train on to another district	1605	1	1	3	1	

NUMBER OF FREIGHT TRAINS INVOLVED AS TO VARIOUS LENGTHS IN CARS, EXCLUSIVE OF CABOOSE									TOTAL

	GATION NUMBER	OF ACCIDENTS	PERSONS KILLED	PERSONS INJURED	ARD LESS	TO 50	TO 60	TO 70
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
I. NEGLIGENCE OF EMPLOYEES:								
(G) Other Forms of Negligence of Employes: (Continued)								
75. Failure to note that there was not sufficient clearance to permit the engine and cars to back past the cars which had been left on the main track	1926	1	1			1		
76. Yard engine being fired up with the throttle and reverse lever apparently in position that permitted the engine to start when sufficient steam pressure was generated, for which an engine watchman was responsible	1480	1		1			1	
77. Failure of the fireman of the following train to maintain a proper lookout and to notify the engineman that the track was occupied	1410	1	1	1	2			
78. Failure of the fireman of the light engine to maintain a proper lookout while making a back-up movement on a passing track	1564	1	1				1	
79. Failure of the engineman and conductor of the transfer train to maintain a proper lookout ahead and by the failure of the engineman to operate under proper control within yard limits	1674	1	1	2	2			
80. Failure of a fireman to maintain proper lookout on a curve to the left and to notify the engineman of a caboose ahead	1681	1	1	2	2			
81. Primarily by the failure of the fireman and head brakeman of extra to maintain a proper lookout when proceeding through yard limits and under a restricted speed signal indication	1813	1		1			1	1
82. Open switch, and by the failure of anyone on the engine to observe the switch lamp indication or to maintain a proper lookout	1826	1		2	1			
83. Failure to obey a wait order for which the engineman and conductor of the passenger train were responsible. A contributing cause was the failure of the crew of the freight train properly to protect their train when running on short time against the passenger train.	1439	1	3	36		1		
84. Failure of the engineman of the following train and the flagman of the leading train to take proper precautions for the safety of their respective trains when operating under close headway	1447	1	2	2	2			
85. Freight train occupying the main track on the time of a superior train without protection, and by the passenger train departing from a station ahead of schedule time, for which the conductors and enginemen of both trains were responsible	1457	1	3	8	1			
86. Failure to apply the power brakes and also a sufficient number of hand brakes to hold the rear portion of a train on a descending grade after the engine had been detached, the responsibility being shared by the engineer, conductor and head brakeman	1492	1	1	1	1			
87. Failure of the conductor of one of the trains properly to check a train register	1493	1		2	1	1		
88. Caused either by the failure of the conductor of the freight train properly to check a train register, or to errors in making an entry in the train register	1510	1	1	15				
89. Failure of the section motor car to be removed from the main track in foggy weather, or to be protected by flag, for which the section foreman was responsible	1516	1	2	2	1			
90. Cut of cars being shoved ahead on a yard track by a transfer engine without due regard for safety	1517	1	1					
91. Failure of the enginemen and firemen of the freight train properly to observe and obey the stop indications of an absolute signal, and by the further failure of the enginemen to operate his train under full control in accordance with flagging instructions	1520	1		9	1			
92. Failure of a conductor and a flagman to afford proper protection for the rear end of their train, and by the failure of a motorman to maintain a proper watch of the track ahead	1527	1	1	26				1
93. Failure of a conductor to check a train register	1571	1	3	6	2			
94. A run-away freight train, due to a closed angle cock in the brake pipe at the head end of the first car behind the locomotive, and to failure to make proper air-brake tests, which would have disclosed this condition, either after the locomotives were changed or before starting down the grade on which the accident occurred	1582	1		2	2			
95. Failure of a conductor to see to it that proper protection was afforded to that portion of his train left standing on main track, and by the failure of an engineman properly to control the speed of his train approaching the depot	1597	1		3	2			
96. Failure of an engineman of the train to maintain proper lookout and to have his train under proper control within yard limits, and by the failure of the conductor to exercise proper care before attempting to kick his train on to another district	1605	1	1	3	1		1	
97. Foreman of the switch engine releasing a block which had been obtained for a movement against current of traffic before the movement had been completed	1632	1	1	1	1			
98. Failure of the engineman of the milk train properly to control the speed of his train in view of existing weather conditions and by his failure to obey signal indications	1636	1		3				
99. Failure of an operator to deliver a meet order. Contributing causes were the failure of the dispatcher to comply with the rules when issuing the order in question, together with a misunderstanding by the operator in the operation of a manual block	1659	1		30				
100. The crew of an extra disregarded the schedule of a superior train and followed that train too closely, in violation of a 10 minute spacing rule	1679	1	4		2			
101. Train running away as a result of starting down the grade at excessive speed, a closed angle cock near the head end of the train preventing the engineman from making an effective application of the brakes, and the members of the crew at the rear end of the train failing to take necessary action in time to bring the train under control	1741	1	1	3				
102. Failure to obey a meet order, and by operating in a train cars having defective brake equipment which rendered inoperative the air brake devices at the rear of the train	1755	1	3	3	2

	I. C. C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS KILLED	PERSONS INJURED	40 AND LESS
	(1)	(2)	(3)	(4)	(5)
I. NEGLIGENCE OF EMPLOYEES:					
(G) Other Forms of Negligence of Employes: (Continued)					
103. Violation of the operating rules by a train dispatcher in completing a meet order to an inferior train before he had obtained the signature of the conductor of the superior train and to disregard of a train order signal in stop position by a conductor and an engineman	1772	1	3	3	1
104. Primarily by the failure of an engineman to have the headlight of his engine displayed, and by his failure to provide such other flag protection as was necessary in view of the fact that he did not know whether the rear of his train was in the clear	1797	1		3	
105. Primarily by the failure of the fireman of the train to maintain a proper lookout while approaching a railroad crossing at grade; contributing causes were the failure of the enginemen of both trains to approach the crossing with their trains under full control	1841	1		2	1
106. Operation of the light engine against an opposing superior train without authority, and by the failure of the crew of the light engine properly to observe and obey the stop indication of a manual block signal	1865	1	1	5	
107. Operation of an extra ahead of a first-class train without sufficient time to clear as required by the rules, and by the failure of an engineman properly to control the speed of his train after being flagged	1867	1		1	
108. Failure of an engineman properly to observe and obey signal indications and also the stop signals of a flagman	1901	1		2	
109. Failure of an operator to display the train-order signal and to deliver a hold order to the crew of the extra and by his further error in lining up the route and displaying signal indications admitting this train to a block which he had pledged to and which was occupied by an opposing train	1909	1	1	3	1
110. Failure of an operator to restore a cross-over switch to normal position, resulting in a freight train being operated against the current of traffic without protection	1940	1	1	1	1
111. Failure of the freight train to be operated under proper control within yard limits; the failure of the fireman and head brakeman of that train to maintain a proper lookout, and the defective condition of the brake valve which prevented the engineman from making an emergency application of the brakes	1954	1		2	2
112. Primarily by the failure of an engineman properly to obey signal indications, while the passenger train flagman did not go back as far as he could have gone in the time available	1964	1		50	1
113. Failure of an engineman properly to control the speed of his train when approaching a meeting point	1973	1		39	1
114. Misunderstanding a yardmaster's instructions concerning one yard movement, and failure to provide adequate safeguards for another yard movement	1974	1	1	1	
115. Failure of a freight train to be properly protected by flag and by the failure of a passenger train to be operated under proper control in view of the fact that the crew held an order directing the freight train to run ahead of them until overtaken	1982	1		17	1
116. Failure of the engineman of the passenger train properly to control the speed of his train when approaching interlocking limits and to obey the stop indication of the home signal	1990	1		6	
117. Failure of the freight train to clear the time of an opposing superior train	1995	1	2	13	1
118. Making of an unauthorized movement on the main line without being properly protected by flag, by the issuance of an improper order by the dispatcher, and by the acceptance of such improper order by the crew of Train No. 32	1999	1		5	2
119. Excessive speed on a sharp curve, the engineman having lost control of the train on a steep descending grade	2001	1	4	8	1
120. Failure of the engineman of the M&E train properly to control speed of his train and approach crossing at grade of the PRR prepared to stop	2005	1		1	2
121. Failure of a rail motor car to keep clear of an opposing scheduled freight train	2008	1		4	
122. Failure of an engineman properly to observe and obey signal indications, and by failure of a flagman and conductor to provide proper flag protection	2013	1	1	3	
123. Train running away on a heavy mountain grade, due to the fact that the portion of the train left standing on the grade was not properly secured before engine cut off	2017	1		1	1
124. Operation of a motor car and trailer on the time of an opposing overdue train without protection	2021	1	1	1	
125. Failure of an engineman to operate his train under proper control within yard limits	2027	1	2	1	2
126. Failure to operate under proper control when approaching and entering yard limits, coupled with failure properly to observe and obey signal indications					
127. Operation of an extra train

I. NEGLIGENCE OF EMPLOYEES:				
(G) Other Forms of Negligence of Employees: (Continued)				
103. Violation of the operating rules by a train dispatcher in completing a meet order to an inferior train before he had obtained the signature of the conductor of the superior train and to disregard of a train order signal in stop position by a conductor and an engineman	1772	1	3	3
104. Primarily by the failure of an engineman to have the headlight of his engine displayed, and by his failure to provide such other flag protection as was necessary in view of the fact that he did not know whether the rear of his train was in the clear	1797	1		3
105. Primarily by the failure of the fireman of the train to maintain a proper lookout while approaching a railroad crossing at grade; contributing causes were the failure of the enginemen of both trains to approach the crossing with their trains under full control	1841	1		2
106. Operation of the light engine against an opposing superior train without authority, and by the failure of the crew of the light engine properly to observe and obey the stop indication of a manual block signal	1865	1	1	5
107. Operation of an extra ahead of a first-class train without sufficient time to clear as required by the rules, and by the failure of an engineman properly to control the speed of his train after being flagged	1867	1		1
108. Failure of an engineman properly to observe and obey signal indications and also the stop signals of a flagman	1901	1		2
109. Failure of an operator to display the train-order signal and to deliver a hold order to the crew of the extra and by his further error in lining up the route and displaying signal indications admitting this train to a block which he had pledged to and which was occupied by an opposing train	1909	1	1	3
110. Failure of an operator to restore a cross-over switch to normal position, resulting in a freight train being operated against the current of traffic without protection	1940	1	1	1
111. Failure of the freight train to be operated under proper control within yard limits; the failure of the fireman and head brakeman of that train to maintain a proper lookout, and the defective condition of the brake valve which prevented the engineman from making an emergency application of the brakes	1954	1		2
112. Primarily by the failure of an engineman properly to obey signal indications, while the passenger train flagman did not go back as far as he could have gone in the time available	1964	1		2
113. Failure of an engineman properly to control the speed of his train when approaching a meeting point	1973	1		39
114. Misunderstanding a yardmaster's instructions concerning one yard movement, and failure to provide adequate safeguards for another yard movement	1974	1	1	1
115. Failure of a freight train to be properly protected by flag and by the failure of a passenger train to be operated under proper control in view of the fact that the crew held an order directing the freight train to run ahead of them until overtaken	1982	1		17
116. Failure of the engineman of the passenger train properly to control the speed of his train when approaching interlocking limits and to obey the stop indication of the home signal	1990	1		6
117. Failure of the freight train to clear the time of an opposing superior train	1995	1	2	13
118. Making of an unauthorized movement on the main line without being properly protected by flag, by the issuance of an improper order by the dispatcher, and by the acceptance of such improper order by the crew of Train No. 32	1999	1		5
119. Excessive speed on a sharp curve, the engineman having lost control of the train on a steep descending grade	2001	1	4	8
120. Failure of the engineman of the N&LE train properly to control speed of his train and approach crossing at grade of the PRR prepared to stop	2005	1		1
121. Failure of a rail motor car to keep clear of an opposing scheduled freight train	2008	1		4
122. Failure of an engineman properly to observe and obey signal indications, and by failure of a flagman and conductor to provide proper flag protection	2013	1	1	3
123. Train running away on a heavy mountain grade, due to the fact that the portion of the train left standing on the grade was not properly secured before engine cut off	2017	1		1
124. Operation of a motor car and trailer on the time of an opposing overdue train without protection	2021	1	1	1
125. Failure of an engineman to operate his train under proper control within yard limits	2027	1	2	1
126. Failure to operate under proper control when approaching and entering yard limits, coupled with failure properly to observe and obey signal indications	2028	1	3	
127. Operation of an extra train on the time of a following superior train without authority and without adequate flag protection	2030	1	1	6
128. Operation of an extra train on close time ahead of a following superior train, and by failure properly to protect a back-up movement	2035	1		13
129. Failure of a hostler properly to control the speed of the light engines while moving over the main track within yard limits, by his failure to maintain a proper lookout, and by the fact that the double-heading cock was open on the engine being towed	2039	1		2
130. Primarily by the failure of the engineman of the freight to operate under control approaching a station in a dense fog; a contributing cause was failure of the flagman of the mixed train to provide proper flag protection in view of [illegible] conditions	2043

	I. C. C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS		NUMBER OF VARIOUS LENGTH		
			KILLED	INJURED	40 AND LESS	41 TO 50	51 TO 60
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
I. NEGLIGENCE OF EMPLOYES:							
(G) Other Forms of Negligence of Employes: (Continued)							
131. Failure of the flagman of the B&M train to maintain a proper lookout and to control the speed of his train properly while making a back-up movement and by failure of the conductor and flagman of the CV train properly to protect their train while moving from a passing track to the main track	2051	1	1		1		1
132. Failure of the freight train to be operated under proper control within yard limits	2062	1	1	3	1		
133. Failure of an engineman properly to control the speed of his train approaching a meeting point	2065	1	1	4	1	1	
134. Train being operated against the current of traffic without authority or protection	2067	1		1	1		
135. Failure of the switching crew to afford flag protection against a second-class train while occupying the main track, and by the freight train not being operated under proper control within yard limits	2071	1	2	1			
136. A conductor, when he entered a branch line, leaving a register slip at the junction to cover the return movement from the branch before the movement was executed	2081	1	2	10	2		
137. Failure of a brakeman to ascertain that a coupling had been made between a car which was picked up and train against which it was placed	2090	1	1		1		
138. Failure of the _____ train to be operated under proper control on a yard track	2098	1	1	2			
139. Failure of the crew of the passenger train to obey a meet order and to comply with block-signal rules	2103	1		13			1
140. Failure of an operator to display a train-order signal and to deliver a "hold" order, and by his further failure to restore a block signal to stop position after the passage of a preceding train	2104	1		5			
141. Failure of a crew to comply with the rule which required trains in the same direction to keep at least 10 minutes apart, where no form of block signal was in use; a contributing cause was the failure of a conductor to provide adequate protection for the rear of his train	2116	1	1	3	2		
142. Failure to operate under proper control within yard limits	2117	1		4			
143. Failure to provide adequate flag protection, and by the failure of the enginemen of the following train to operate under such control, in view of existing weather conditions, as would enable him to comply with signal indications	2119	1		3			
144. Train entering a block without authority and by failure of the crew of that train to provide adequate flag protection before making a cross-over movement	2124	1		2	1		
145. Route being changed directly in front of an approaching train as a result of failure properly to identify such train	2125	1	1	4			1
146. Failure of a crew properly to protect a cross-over movement and by the failure of an engineman properly to observe and obey such signal indications	2129	1	3		1		
147. Failure of Extra 1207 to be operated under proper control within yard limits	2132	1	2	15	2		
148. Failure of a flagman to provide protection for a work extra occuping the main track on the time of an overdue superior train; a contributing cause was the operation of a freight train at an excessive rate of speed after having received a caution block-signal indication	2134	1	1	3			1
149. Failure of the train to be properly protected by flag and of the following train to be operated in accordance with automatic block-signal indications	2135	1	1	1	1		
150. Failure of train No. 167 to be operated in compliance with signal indications and by the failure of Extra 1424 to be properly protected by flag	2139	1	1	2		1	
151. Failure properly to protect a back-up movement	2140	1	1		2		
152. Failure to provide flag protection and by failure properly to observe and obey block-signal indications	2147	1	3	4			
153. Failure to properly observe and obey signal indications and failure properly to protect the rear of a standing train	2152	1		2	2		
154. Failure properly to control the speed of a train when approaching a cross-over, due in part to a partly closed angle cock which prevented the engineman from obtaining normal braking throughout the train	2153	1		1	1		
155. Failure properly to control the speed of _____ train No. 84 when approaching a railroad crossing at grade	2154	1	1	1	1	1	
156. Failure to operate train Second No. 47 under control within yard limits	2155	1	2	1

I. NEGLIGENCE OF EMPLOYES:						
(C) Other Forms of Negligence of Employes: (Continued)						
131. Failure of the flagman of the BBB train to maintain a proper lookout and to control the speed of his train properly while making a back-up movement and by failure of the conductor and flagman of the CV train properly to protect their train while moving from a passing track to the main track	2051	1	1		1	
132. Failure of the freight train to be operated under proper control within yard limits	2062	1	1	3	1	
133. Failure of an engineman properly to control the speed of his train approaching a meeting point	2065	1	1	4	1	1
134. Train being operated against the current of traffic without authority or protection	2067	1		1	1	
135. Failure of the switching crew to afford flag protection against a second-class train while occupying the main track, and by the freight train not being operated under proper control within yard limits	2071	1	2	1		
136. A conductor, when he entered a branch line, leaving a register slip at the junction to cover the return movement from the branch before the movement was executed	2081	1	2	10	2	
137. Failure of a brakeman to ascertain that a coupling had been made between a car which was picked up and train against which it was placed	2090	1	1		1	
138. Failure of the _____ train to be operated under proper control on a yard track	2098	1	1	2		
139. Failure of the crew of the passenger train to obey a meet order and to comply with block-signal rules	2103	1		13		
140. Failure of an operator to display a train-order signal and to deliver a "hold" order, and by his further failure to restore a block signal to stop position after the passage of a preceding train	2104	1		5		
141. Failure of a crew to comply with the rule which required trains in the same direction to keep at least 10 minutes apart, where no form of block signal was in use; a contributing cause was the failure of a conductor to provide adequate protection for the rear of his train	2116	1	1	3	2	
142. Failure to operate under proper control within yard limits	2117	1		4		
143. Failure to provide adequate flag protection, and by the failure of the enginemen of the following train to operate under such control, in view of existing weather conditions, as would enable him to comply with signal indications	2119	1		3		1
144. Train entering a block without authority and by failure of the crew of that train to provide adequate flag protection before making a cross-over movement	2124	1		2	1	
145. Route being changed directly in front of an approaching train as a result of failure properly to identify such train	2125	1	1	4		
146. Failure of a crew properly to protect a cross-over movement and by the failure of an engineman properly to observe and obey such signal indications	2129	1	3		1	
147. Failure of Extra 1207 to be operated under proper control within yard limits	2132	1	2	15	2	
148. Failure of a flagman to provide protection for a work extra occuping the main track on the time of an overdue superior train; a contributing cause was the operation of a freight train at an excessive rate of speed after having received a caution block-signal indication	2134	1	1	3		
149. Failure of the train to be properly protected by flag and of the following train to be operated in accordance with automatic block-signal indications	2135	1	1	1	1	
150. Failure of train No. 167 to be operated in compliance with signal indications and by the failure of Extra 1424 to be properly protected by flag	2139	1	1	2		1
151. Failure properly to protect a back-up movement	2140	1	1		2	
152. Failure to provide flag protection and by failure properly to observe and obey block-signal indications	2147	1	3	4		
153. Failure to properly observe and obey signal indications and failure properly to protect the rear of a standing train	2152	1		2	2	
154. Failure properly to control the speed of a train when approaching a cross-over, due in part to a partly closed angle cock which prevented the enginemen from obtaining normal braking throughout the train	2153	1		1	1	
155. Failure properly to control the speed of _____ train No. 84 when approaching a railroad crossing at grade	2154	1	1	1	1	1
156. Failure to operate train Second No. 47 under control within yard limits	2155	1	2	1		
157. Open switch and failure of those on the engine of train Second No. 52 to maintain a proper lookout of the track ahead	2158	1	2	1		
158. Failure of Extra 2002 to be operated under proper control within yard limits	2162	1	2	3	2	
159. Engine 2505 fouling the clearance point of a switch, while another train was passing	2163	1	1	2		
160. Failure to obey a wait order; a contributing cause was the failure of an extra train to clear the time of an opposing regular train as required by rule	2166	1	1	22	1	
161. Freight train fouling the clearance point of a main-track switch directly in front of an approaching superior train	2177	1		3		
162. Failure to operate Extra 101 under control within yard limits	2184	1	2	1	1

I. NEGLIGENCE OF EMPLOYES:								
(G) Other Forms of Negligence of Employes: (Continued)								
163. Failure to obey a meet order, due to the order having been misread by the engineman; also by failure to operate under proper control within yard limits	2187	1		2	1	1		
164. Failure to operate under proper control within yard limits	2188	1	1	2	2			
165. Failure of the engine crew of a work extra to maintain a proper lookout when making a movement within working limits	2191	1	3		1			
166. Failure of a train crew to discover that a coupling between two cuts of cars had not been properly made, and failure to have a member of the train crew stationed on the leading car of the cut of cars being pushed into the storage track	2195	1	2		1			
167. Failure to provide adequate flag protection while a rail was being replaced in the track	2196	1	2	6	1			
168. Failure of the crew of the work train to clear a superior train before the wait requirements set up for that train by train order had expired	2199	1	3	5	1			
169. Failure of second 92 to be operated under proper control when approaching and entering yard limits; a contributing cause was the failure of first 92 to provide adequate flag protection within yard limits when carrying passengers	2202	1		5			1	
170. Operation of a section motorcar on the main track too close to the time of a following train and failure of the crew of the motor car to provide adequate flag protection	2204	1	1	2			1	
171. Failure of the crew of the yard engine to operate under control on a siding	2214	1	1	3			1	
172. Failure of the passenger train to be operated in accordance with the requirements of a caution card in manual-block territory, and the failure of the crew of the freight train to provide adequate flag protection	2215	1	3	10				
173. Failure of the passenger train to be operated under control in yard limits, and failure of the crew of the freight train fully to carry out the requirements of the flagging rule	2220	1	1	3	1			
174. Failure of Extra 2007 to be operated under proper control within yard limits	2232	1	1	1	1			
175. Failure properly control the speed of an extra train entering yard limits, possibly due to some mental disorder of the engineman operating the locomotive of that train	2233	1	2		1	1		
176. Failure of the mixed train to be operated under control within yard limits, and the failure of the freight train to provide adequate rear-end protection in foggy weather	2240	1	1		1			
177. Failure to require a trainman to occupy a conspicuous position on the leading car of a cut of cars being shoved on a yard track	2244	1	1		1	1		
178. Failure of the freight train crew to provide adequate rear-end protection, and by the action of the dispatcher in authorizing the passenger train to enter an occupied block under a clear manual block signal	2246	1		2				1
179. Failure to properly control the speed of a freight train within yard limits, particularly in view of existing weather conditions	2247	1	2	2	1			
180. Cars being backed into a short stub-end house track by mistake, instead of into the siding as instructed	2248	1	1		1			
181. Failure of the superior train to stop clear of the switch used by the train being met in entering the siding at a train-order meeting point	2253	1	1	4				
182. Failure of Extra 312 to provide flag protection within yard limits while carrying passengers, and the failure of Extra 5604 to be operated under control within yard limits	2257	1	5	33				
183. Failure of the crew of Extra 1384 properly to observe and obey signal indications, and to comply with the requirements of Rule 93	2260	1	2		2			
184. Failure properly to control the speed of a light engine, due to the engineman falling asleep	2262	1	1	2				
185. Failure of the yard engine to be operated under proper control within yard limits	2263	1		3		1		
186. Failure of an inferior train to clear the time of a superior train and to furnish flag protection as required by the rules, and the failure of the superior train to be stopped short of a block signal displaying a stop indication	2264	1		18			1	
187. Leverman failing definitely to ascertain that the route was properly line before clearing a signal for a passenger train to proceed through the interlocking, resulting in the diversion of that train to an occupied nonsignaled yard track	2273	1		6	1			
188. Failure properly to protect the rear end of the leading train, and by failure of the light engine to be operated in accordance with signal rules	2280	1		4	1			
	[illegible]	1	1	2	1

169. Failure of second 92 to be operated under proper control when approaching and entering yard limits; a contributing cause was the failure of first 92 to provide adequate flag protection within yard limits when carrying passengers	2202	1		5			1	
170. Operation of a section motorcar on the main track too close to the time of a following train and failure of the crew of the motor car to provide adequate flag protection	2204	1	1	2			1	
171. Failure of the crew of the yard engine to operate under control on a siding	2214	1	1	3			1	
172. Failure of the passenger train to be operated in accordance with the requirements of a caution card in manual-block territory, and the failure of the crew of the freight train to provide adequate flag protection	2215	1	3	10				
173. Failure of the passenger train to be operated under control in yard limits, and failure of the crew of the freight train fully to carry out the requirements of the flagging rule	2220	1	1	3	1			
174. Failure of Extra 2007 to be operated under proper control within yard limits	2232	1	1	1	1			
175. Failure properly control the speed of an extra train entering yard limits, possibly due to some mental disorder of the engineman operating the locomotive of that train	2233	1	2		1	1		
176. Failure of the mixed train to be operated under control within yard limits, and the failure of the freight train to provide adequate rear-end protection in foggy weather	2240	1	1		1			
177. Failure to require a trainman to occupy a conspicuous position on the leading car of a cut of cars being shoved on a yard track	2244	1	1		1	1		
178. Failure of the freight train crew to provide adequate rear-end protection, and by the action of the dispatcher in authorizing the passenger train to enter an occupied block under a clear manual block signal	2246	1		2				1
179. Failure to properly control the speed of a freight train within yard limits, particularly in view of existing weather conditions	2247	1	2	2	1			
180. Cars being backed into a short stub-end house track by mistake, instead of into the siding as instructed	2248	1	1		1			
181. Failure of the superior train to stop clear of the switch used by the train being met in entering the siding at a train-order meeting point	2253	1	1	4				
182. Failure of Extra 312 to provide flag protection within yard limits while carrying passengers, and the failure of Extra 5604 to be operated under control within yard limits	2257	1	5	33				
183. Failure of the crew of Extra 1384 properly to observe and obey signal indications, and to comply with the requirements of Rule 93	2260	1	2		2			
184. Failure properly to control the speed of a light engine, due to the engineman falling asleep	2262	1	1	2				
185. Failure of the yard engine to be operated under proper control within yard limits	2263	1		3		1		
186. Failure of an inferior train to clear the time of a superior train and to furnish flag protection as required by the rules, and the failure of the superior train to be stopped short of a block signal displaying a stop indication	2264	1		18			1	
187. Leverman failing definitely to ascertain that the route was properly line before clearing a signal for a passenger train to proceed through the interlocking, resulting in the diversion of that train to an occupied nonsignaled yard track	2273	1		6	1			
188. Failure properly to protect the rear end of the leading train, and by failure of the light engine to be operated in accordance with signal rules	2280	1		4	1			
189. Failure to operate the freight train under proper control within yard limits	2281	1	1	2	1			
190. Failure of Extra 928 to provide proper flag protection and by the failure of Extra 1064 to be operated in accordance with the interlocking home signal indication	2283	1		3	1		1	
191. Failure of a motor-car to clear the main track for a freight train or to provide flag protection, on account of over-estimating the running time of the freight train	2293	1		5	1			
192. Failure of an inferior train to clear the schedule time of an opposing superior train as required by rule	2297	1	1	26		1		
193. Failure to operate a train under proper control prepared to stop before reaching the crossing gates at a railroad intersection	2298	1	1	2		1	1	
194. Inferior train occuping the main track without authority on the time of a following first-class train, and not providing proper protection	2301	1		11	1

			KILLED	INJURED	40 AND LESS	41 TO 50	51 TO 60	61 TO 70
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
I. NEGLIGENCE OF EMPLOYES:								
(G) Other Forms of Negligence of Employes: (Continued)								
195. Failure to maintain a proper lookout from both trains and to proceed under proper control prepared to stop when approaching a railroad crossing at grade	2306	1		10	1			
196. Failure to route a west-bound train on the westward track as intended, failure to correctly record its movement on the eastward track over a route which had been set up for a preceding train and subsequent authorization for an east-bound train to pass a home interlocking signal, displaying stop, when the eastward track was occupied by the opposing train	2307	1	1	20				
197. Failure to operate the freight train under proper control within yard limits	2311	1	1	4	1			
198. Failure to operate Extra 1843 in accordance with signal indications and by failure of Extra 1539 to furnish adequate flag protection	2320	1		5	2			
199. Failure properly to obey signal indications and failure to move under proper control within yard limits prepared to stop unless the track was seen or known to be clear	2322	1		5			1	
200. Failure of the _____ train to stop at a railroad crossing at grade which was occupied by a train on a conflicting route	2324	1		6	1			
201. Failure of the crews of both trains to maintain a proper lookout and to proceed under proper control prepared to stop when approaching a railroad crossing at grade	2329	1		4	2			
202. Failure of No. 238 to clear the time of an opposing superior train and to obey the stop indication of an automatic block signal, and probably also by failure of No. 107 properly to observe and obey an approach signal indication	2332	1	3	38		1		
203. Failure to secure a car on a grade, which resulted in the car sidesweeping the cab of the engine, damaging air, steam, and hot water connections, which compelled the engine crew to leave the engine without closing the throttle and in turn allowed the engine to move out of control	2333	1	2	17			1	
204. Failure to provide proper flag protection for the preceding train and by failure to operate the following train in accordance with interlocking signal indications	2339	1		2				
205. No. 197 occupying the main track without authority because of a misunderstanding of instructions, and failure to operate No. 940 in accordance with the yard limit rule	2342	1	1	1	2			
206. Switch being improperly lined immediately in front of an approaching train	2345	1		11	2			
207. Failure to observe that a movement was being made on the wrong track	2347	1	5	3	1			
208. Failure of Extra 843 to provide proper flag protection and by the failure to operate No. 325 in accordance with block-signal indications	2348	1		8				1
209. Failure to protect the rear end of the first train and by failure to control properly the speed of the second train in compliance with a permissive manual-block indication. The collision of the third train with the wreckage was caused by failure to provide proper flag protection.	2351	1	4	4			1	
210. Excessive speed on a sharp curve	2353	1	2					1
211. Failure to control properly the speed of a freight train approaching a meeting point	2366	1	1	4				
212. Failure to control properly the speed of a freight train when approaching a meeting point	2372	1		5				
213. Failure to control the speed of a train properly when approaching a meeting point	2380	1		32	1			
214. No. 71 being operated in accordance with the indication of a block signal which falsely displayed a proceed indication, instead of being operated under control within yard limits as required by the yard limit rule	2381	1		3				
215. Excessive speed on a sharp curve, because of failure to control the speed properly on a descending grade	2382	1	2		1			
216. Failure of a train to clear the time of an opposing superior train and failure to furnish proper flag protection after having failed to clear the time of the opposing superior train	2383	1		1			1	1
217. Failure to provide adequate flag protection for the preceding train and by failure to control the speed of the following train in compliance with a permissive-block indication	2384	1	1	2				2
218. A junction switch being opened without authority or instructions, which resulted in diverting an approaching train to an occupied track, and failure to control the speed of the passenger train properly when approaching a junction and when operating against the current of traffic within yard limits	2386	1	2	38	1

195. Failure to maintain a proper lookout from both trains and to proceed under proper control prepared to stop when approaching a railroad crossing at grade	2306	1		10	1		
196. Failure to route a west-bound train on the westward track as intended, failure to correctly record its movement on the eastward track over a route which had been set up for a preceding train and subsequent authorization for an east-bound train to pass a home interlocking signal, displaying stop, when the eastward track was occupied by the opposing train	2307	1	1	20			
197. Failure to operate the freight train under proper control within yard limits	2311	1	1	4	1		
198. Failure to operate Extra 1843 in accordance with signal indications and by failure of Extra 1539 to furnish adequate flag protection	2320	1		5	2		
199. Failure properly to obey signal indications and failure to move under proper control within yard limits prepared to stop unless the track was seen or known to be clear	2322	1		5			1
200. Failure of the ____ train to stop at a railroad crossing at grade which was occupied by a train on a conflicting route	2324	1		6	1		
201. Failure of the crews of both trains to maintain a proper lookout and to proceed under proper control prepared to stop when approaching a railroad crossing at grade	2329	1		4	2		
202. Failure of No. 238 to clear the time of an opposing superior train and to obey the stop indication of an automatic block signal, and probably also by failure of No. 107 properly to observe and obey an approach signal indication	2332	1	3	38		1	
203. Failure to secure a car on a grade, which resulted in the car sideswiping the cab of the engine, damaging air, steam, and hot water connections, which compelled the engine crew to leave the engine without closing the throttle and in turn allowed the engine to move out of control	2333	1	2	17			1
204. Failure to provide proper flag protection for the preceding train and by failure to operate the following train in accordance with interlocking signal indications	2339	1		2			
205. No. 197 occupying the main track without authority because of a misunderstanding of instructions, and failure to operate No. 94C in accordance with the yard limit rule	2342	1	1	1	2		
206. Switch being improperly lined immediately in front of an approaching train	2345	1		11	2		
207. Failure to observe that a movement was being made on the wrong track	2347	1	5	3	1		
208. Failure of Extra 843 to provide proper flag protection and by the failure to operate No. 325 in accordance with block-signal indications	2348	1		8			
209. Failure to protect the rear end of the first train and by failure to control properly the speed of the second train in compliance with a permissive manual-block indication. The collision of the third train with the wreckage was caused by failure to provide proper flag protection.	2351	1	4	4			1
210. Excessive speed on a sharp curve	2353	1	2				
211. Failure to control properly the speed of a freight train approaching a meeting point	2366	1	1	4			
212. Failure to control properly the speed of a freight train when approaching a meeting point	2372	1		5			
213. Failure to control the speed of a train properly when approaching a meeting point	2380	1		32	1		
214. No. 71 being operated in accordance with the indication of a block signal which falsely displayed a proceed indication, instead of being operated under control within yard limits as required by the yard limit rule	2381	1		3			
215. Excessive speed on a sharp curve, because of failure to control the speed properly on a descending grade	2382	1	2		1		
216. Failure of a train to clear the time of an opposing superior train and failure to furnish proper flag protection after having failed to clear the time of the opposing superior train	2383	1		1			1
217. Failure to provide adequate flag protection for the preceding train and by failure to control the speed of the following train in compliance with a permissive-block indication	2384	1	1	2			
218. A junction switch being opened without authority or instructions, which resulted in diverting an approaching train to an occupied track, and failure to control the speed of the passenger train properly when approaching a junction and when operating against the current of traffic within yard limits	2386	1	2	38	1		
219. Failure of an extra train to clear the time of an opposing first-class train	2388	1		49	1		
220. Failure to control the speed of a following train because of an open double-heading cock on the second engine	2391	1		6		1	
221. Failure to provide proper flag protection for the preceding train and by operation of the following train in automatic train-stop territory with the automatic train-stop and cab signal devices cut out, contrary to current instructions, resulting in an imperfectly displayed cab signal	2393	1		8			
222. Failure to provide proper flag protection for a work extra and by failure to operate a freight extra in accordance with signal indications	2396	1		5			
223. Engine occupying the main track without authority and without flag protection	2397	1	2	1	1		
224. Failure to control the speed of the second train in compliance with the rules applicable to train movements on an assigned track	2402	1	1	2	2

	I. C. C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS		NUMBER VARIOUS LE		
			KILLED	INJURED	40 AND LESS	41 TO 50	51 TO 60
	(1)	(2)	(3)	(4)	(5)	(6)	(7)
II. DEFECTS IN OR FAILURES OF EQUIPMENT:							
(F) Couplers: (Continued)							
6. Freight train breaking in two between the second and third cars on account of a low coupler, this condition being due to truck springs being compressed almost solid, while a contributing cause was the amount of free slack in the couplers.	2026	1		5			
7. Low coupler; a contributing cause was excessive free slack in the draft gears of both of the cars involved	2053	1		1			
8. Break in two of the train due to the failure of a coupler shank	2224	1		2			
9. Freight train parting between the ninth and tenth cars because of a low coupler	2330	1		1			
TOTAL - DEFECTS IN OR FAILURES OF COUPLERS		9	3	14			1
(G) Draft Rigging:							
1. Pulling out coupler as result of the coupler key working out	1433	1	4	8	1		
2. Freight train breaking in two between the twenty-fifth and twenty-sixth cars due to a defective coupler yoke	1625	1	1	1			
3. Pulled out coupler	1761	1	4				
4. Pulled out coupler	1768	1		54			
5. Breaking in two between the eighteenth and nineteenth cars due to a defective coupler yoke	1898	1	1				
6. Five cars and a caboose running away after a break in two, which resulted from a defective coupler yoke, and by the further fact that the air brakes were inoperative in this portion of the train because of a defective train pipe at the head end of a locomotive crane, the fifth car from the rear	2023	1	2	5	2		
7. Drawbar being pulled out of the front end of the eighteenth car, due to a broken coupler yoke	2200	1		4			1
TOTAL - DEFECTS IN OR FAILURES OF DRAFT RIGGING		7	12	72	3		1
(H) Car Bodies and Other Parts of Equipment:							
1. Buckling of a car in the freight train, causing the car ahead of it to foul the adjacent track, where it was struck by the passenger train	1575	1	1	25			
2. Break in two on account of a low coupler and excessive free slack in the draft gears and attachments	2106	1	1	4			
3. Train parting between the ninth and tenth cars in the train on account of a bent carrier iron, low coupler, and excessive free slack in the draft gear of a refrigerator car	2143	1		1			
TOTAL - DEFECTS IN OR FAILURES OF CAR BODIES		3	2	30			
GRAND TOTAL - DEFECTS IN OR FAILURES OF EQUIPMENT		79	108	318	24	11	10
III. DEFECTS IN OR IMPROPER MAINTENANCE OF WAY AND STRUCTURES:							
(A) Bridges, Trestles, Culverts and Tunnels:							
1. Collapse of a bridge due to its having been weakened by the derailment of a car in a preceding freight train	1412	1	2	2	1		
2. Collapse of a timber trestle under the train, probably resulting from removal of essential braces while the structure was undergoing extensive repairs	2002	1	5	3	1		
TOTAL - DEFECTS IN BRIDGES, TRESTLES, CULVERTS AND TUNNELS		2	7	5	2		
(B) Rails and Joints:

1. Wing fence of a cattle guard that was lying on track	1395	1	1	2					
2. Automobile being driven upon crossing at grade directly in front of a passenger train which was approaching at high speed	1622	1	11	11	1				
3. Cocked or partly open switch, apparently due to tampering	1665	1	2	1	1				
4. Cocked switch, which had been tampered with by two young boys	1726	1	2	1	1				
5. Cocked or partly opened switch, due to malicious tampering	1732	1		3	1				
6. Cocked or partly opened switch, due to tampering	1795	1	1	3	1				
7. Cocked or partly opened switch	1904	1	1		1				
8. Cocked or partly opened switch	1917	1	1	2				1	
9. Open switch. (Responsibility not determined)	1724	1	2	2		1			
10. Automobile being driven into the side of the train, for which the driver of the automobile was responsible	1785	1	1	4	1				
11. Large rock having fallen from the side of a cliff, fouling the track	1806	1	1	1				1	
12. Track spike having been placed on the track by an eight year old boy	1823	1	1	6		1			
13. Rock slide	1872	1	4	2					
14. Land slide	1873	1	2	14				1	
15. Engine wheels striking one or more pieces of wood on the high rail of a curve	1878	1	1	7		1			
16. Striking cattle on track	1879	1	5		1				
17. Large rock having fallen on track	1881	1	2	1	1				
18. Deep hard packed snow on the west rail of the track	1895	1	1	2	1				
19. Flangeways at a highway crossing being filled with dirt and stones	1653	1	1	4	1				
20. Washout	1523	1	2	3				1

	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
IV. MISCELLANEOUS CAUSES:								
(A) Ascertained Causes: (Continued)								
40. Washout	2007	1	3	1				
41. Automobile being driven upon a railroad crossing at grade directly in front of an approaching train	2020	1	2	2				
42. Bridge having been weakened due to high water, to such an extent that it collapsed under the weight of the train	1432	1	4		1			
43. A fill becoming saturated with moisture to such an extent as to result in its giving way under the weight of the engine	2041	1	2	1	1			
44. Condition of the fourteenth car in the train, which permitted the greater weight to be carried on the right side, and allowed an excessive rocking motion of the car when aggravated by irregular track conditions	2050	1		4	1		1	
45. Body of refrigerator car buckling out of the middle of the freight train due to severe slack action and fouling the adjacent truck directly in front of an approaching passenger train	2055	1	3	11				
46. Pilot of engine striking a car stake, which apparently resulted in taking enough weight off the engine-truck wheels to allow the left wheel to mount the high rail of a curve	2064	1	1	1			1	
47. Run-in of slack	2069	1	1				1	
48. Motor truck being driven upon a highway grade crossing directly in front of an approaching train	2074	1	3	2	1			
49. Washout	2075	1	1	2	1			
50. Open switch, due to a reinforcing bolt having become lodged between the normally closed switch point and the stock rail in such manner as to make it impossible to close and lock the switch, but permitting the improper display of proceed signal indications	2076	1	1	5			1	
51. Heavy rectangular, metal plate falling off a flat car and rolling under the truck of the following car	2083	1	1	1	1			
52. Piece of iron having been placed on the track by a 12-year old boy	2085	1	1	2				
53. Tank car rocking off the track on a curve, due principally to irregular track conditions	2094	1		3			1	
54. Train running off a derail which had been restored to its normal position by some unknown person	2105	1	1	1	1			
55. Land and rock slide	2109	1	2	3	1			
56. Ice in the flangeways of a highway crossing	2136	1	1	1		1		
57. Block of wood on the high rail of a curve	2194	1	2	1	1			
58. Collapse of a trestle which had been weakened by fire	2193	1	3		1			
59. Rock slide	2197	1	1	2	1			
60. Motor truck being driven upon a highway crossing at grade directly in front of an approaching train	2206	1	1	3	1			
61. Motor truck being driven upon a highway grade crossing directly in front of an approaching train	2207	1	1	4	1			
62. Probably due to a combination of a top-heavy load and a partially bound truck-center casting in the seventeenth car in the train, in conjunction with slight irregularities in the track	2216	1	2		1			
63. Cut of cars running away from a yard on a descending grade, due to the car rider falling from the car before a hand brake had been set	2221	1	1	1	1			
64. Excessive rocking motion of the tender, due to the rate of speed and the fact that water in the tank was low, resulting in reduced weight on the rear or leading tender truck	2234	1	1	1	1			
65. Landslide	2239	1	2	3			1	
66. Wheels of a tank car climbing the outside rail of a curve because of excessive side bearing clearance and irregularities in track surface, the car trucks being held rigid due to the brakes being applied when this car approached and entered upon this curve	2242	1	1	1	1			
67. Rock which had fallen upon the track	2258	1	1	2				
68. Excessive speed on a sharp curve, together with insecure track due to lack of ballast	2270	1	1	5		1		
69. Switch being inadvertently left open	2274	1		5		1		
70. Collapse of a bridge due to its being struck and weakened by the derailing equipment of a highway bridge located about 7 miles upstream

43. A fill becoming saturated with moisture to such an extent as to result in its giving way under the weight of the engine	2041	1	2	1
44. Condition of the fourteenth car in the train, which permitted the greater weight to be carried on the right side, and allowed an excessive rocking motion of the car when aggravated by irregular track conditions	2050	1		4
45. Body of refrigerator car buckling out of the middle of the freight train due to severe slack action and fouling the adjacent truck directly in front of an approaching passenger train	2055	1	3	11
46. Pilot of engine striking a car stake, which apparently resulted in taking enough weight off the engine-truck wheels to allow the left wheel to mount the high rail of a curve	2064	1	1	1
47. Run-in of slack	2069	1	1	
48. Motor truck being driven upon a highway grade crossing directly in front of an approaching train	2074	1	3	2
49. Washout	2075	1	1	2
50. Open switch, due to a reinforcing bolt having become lodged between the normally closed switch point and the stock rail in such manner as to make it impossible to close and lock the switch, but permitting the improper display of proceed-signal indications	2076	1	1	5
51. Heavy rectangular, metal plate falling off a flat car and rolling under the truck of the following car	2083	1	1	1
52. Piece of iron having been placed on the track by a 12-year old boy	2085	1	1	2
53. Tank car rocking off the track on a curve, due principally to irregular track conditions	2094	1		3
54. Train running off a derail which had been restored to its normal position by some unknown person	2105	1	1	1
55. Land and rock slide	2109	1	2	3
56. Ice in the flangeways of a highway crossing	2136	1	1	1
57. Block of wood on the high rail of a curve	2194	1	2	1
58. Collapse of a trestle which had been weakened by fire	2193	1	3	
59. Rock slide	2197	1	1	2
60. Motor truck being driven upon a highway crossing at grade directly in front of an approaching train	2206	1	1	3
61. Motor truck being driven upon a highway grade crossing directly in front of an approaching train	2207	1	1	4
62. Probably due to a combination of a top-heavy load and a partially bound truck-center casting in the seventeenth car in the train, in conjunction with slight irregularities in the track	2216	1	2	
63. Cut of cars running away from a yard on a descending grade, due to the car rider falling from the car before a hand brake had been set	2221	1	1	1
64. Excessive rocking motion of the tender, due to the rate of speed and the fact that water in the tank was low, resulting in reduced weight on the rear or leading tender truck	2234	1	1	1
65. Landslide	2239	1	2	3
66. Wheels of a tank car climbing the outside rail of a curve because of excessive side bearing clearance and irregularities in track surface, the car trucks being held rigid due to the brakes being applied when this car approached and entered upon this curve	2242	1	1	1
67. Rock which had fallen upon the track	2258	1	1	2
68. Excessive speed on a sharp curve, together with insecure track due to lack of ballast	2270	1	1	5
69. Switch being inadvertantly left open	2274	1		5
70. Collapse of a bridge due to its having been broken and weakened by the drifting wreckage of a highway bridge located about 7 miles upstream, which had been washed out by flood water	2275	1	2	1
71. Deposit of dirt upon the tracks at a road crossing, due to heavy rainfall	2295	1	3	1
72. Heavy run-in of slack due to a sudden stop following a heavy service brake-pipe reduction	2310	1		5
73. Failures of the couplers between the forty-sixth and forty-seventh cars to couple properly when the train was assembled	2314	1		1
74. School bus being driven upon a highway grade crossing directly in front of an approaching train	2315	1	24	15

	I. C. C. INVESTIGATION NUMBER	NUMBER OF ACCIDENTS	PERSONS KILLED	PERSONS INJURED	NUMBER OF FREIGHT TRAINS INVOLVED VARIOUS LENGTHS IN CARS, EXCLUSIVE O: 40 AND LESS	41 TO 50	51 TO 60	61 TO 70	71 TO 80	81 TO 90	91 TO 100
	(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)	(9)	(10)	(11)
IV. MISCELLANEOUS CAUSES:											
(A) Ascertained Causes: (Continued)											
75. Extra 3342 parting between the thirty-ninth and fortieth cars, owing primarily to a low coupler and a contributing factor of free slack in the draft gear, and the collision of the two portions of the train which resulted in the train buckling and fouling an adjacent track where it was struck by a passenger train	2316	1		6							
76. Train striking a rock which had fallen upon the track	2319	1	1	6				1			
77. Train striking rocks which had fallen upon the track	2325	1	3	1							
78. Striking a rock on the track, simultaneously with which the engine and tender were struck by a land slide	2327	1	1	1	1						
79. Collapse of a wooden bridge, which had been weakened by two bents being broken off and forced from under it, because of pressure exerted by debris and highwater	2331	1		2	1						
80. Engine-truck wheels being raised sufficiently for the flanges to pass over the rail, because of ice in the flangeways and along the rails adjacent to a planked road crossing	2334	1	1	1	1						
81. Rock and shale slide	2344	1	1	1		1					
82. Gasoline tank truck being driven upon a railroad crossing at grade immediately in front of an approaching train	2349	1	4						1		
83. Gasoline tank truck being driven upon a railroad crossing at grade directly in front of an approaching train	2350	1	1	3	1						
84. Washout	2354	1	2			1					
85. Washout	2367	1	1	2							
86. Train striking large rocks	2368	1	3				1				
87. Engine truck wheel striking a spike which had been placed on top of the high rail of a curve	2385	1	2	1				1			
TOTAL - MISCELLANEOUS CAUSES - ASCERTAINED CAUSES		87	168	336	42	13	9	11	4	3	1
(B) Unascertained Causes:											
1. Not definitely ascertained (derailment of pony-truck wheels of engine)	1703	1	1	3				1			
2. Not definitely ascertained (side collision)	1734	1	1	2						2	
3. Not definitely ascertained (derailment of engine)	1779	1	1	2			1				
4. Not definitely ascertained (derailment of cars)	1836	1	4						1

BRIEF DESCRIPTION OF ACCIDENTS INVOLVING TRAINS WHICH CONSISTED OF MORE THAN 14 CARS

I. C. C. INVESTIGATION NUMBER

1973 A freight train consisting of 41 cars and a caboose collided with the third car from the engine of a 15 car passenger train which was entering a siding. No fatalities resulted, but injury to 35 passengers and 4 Pullman employes occurred. The accident was caused by the failure of the enginemen of the freight train to control the speed of his train approaching the meeting point.

1993 The engine, its tender, and the first 8 cars of a 14 car passenger train were derailed, caused by a washout due to an unusually heavy local rainstorm. There were no fatalities; 18 passengers, 15 dining car employes, 1 train porter and 3 railroad employes were injured.

2015 The engines and first 2 cars of a 14 car passenger train were derailed when it collided with a motor truck at a grade crossing caused by the motor truck being driven upon the railroad crossing directly in front of the approaching train. There were no fatalities; 9 passengers, 7 dining car employes, 3 Pullman employes, and the driver of the truck were injured.

2213 A 5 car passenger train collided with the 13th car from the engine of a 24 car milk and passenger train which was passing over a cross-over, caused by the failure properly to control the speed of the 5 car train when passing a grade signal and approaching a cross-over at the end of double-track. There were no fatalities; the flagman and the baggageman of the milk train and the conductor and fireman of the 5-car train were injured.

2365 The engine and 5 first cars, which had been detached from a 30 car milk train, derailed one of the milk cars while backing into a siding, caused by the separation of a switch point from the stock rail due to the throw-lever of the switch stand being unlatched. The head trainman was fatally injured.

2374 A 14 car passenger train collided with the side of a 10 car passenger train at a railroad crossing at grade, caused by failure of the enginemen to control the speed of a train in compliance with interlocking signals. One passenger and one employe were killed, and 16 passengers and 2 dining-car employes were injured.

CAUSE (a)	I.C.C. NO. (b)	KIND OF ACCIDENT (c)	PERSONS KILLED: PASSENGERS (d)	KILLED: EMPLOYES (e)	KILLED: OTHERS (f)	INJURED: PASSENGERS (g)	INJURED: EMPLOYES (h)	INJURED: OTHERS (i)	NUMBER OF PASSENGER TRAINS INVOLVED AS TO VARIOUS LENGTHS IN CARS: 5 AND LESS (j)	6 TO 8 (k)	9 TO 11 (l)	12 TO 14 (m)	OVER 14 CARS (n)	TOTAL (o)
I. NEGLIGENCE OF EMPLOYES:														
(A) Train Orders:														
1. Failure to obey a meet order	1900	Collision		2			2	2		1				
2. Failure to obey a meet order	1944	Collision				2		1	1					
3. Failure of the motorman of a passenger train to obey a meet order	2003	Collision	6	1		20	2	1	1					
4. Failure to obey a meet order	2024	Collision		3		6	3	2			2			
5. Failure of a crew to obey a meet order	2086	Collision		4	1	54	10	4	2					
6. Failure to obey a meet order	2107	Collision				12	4	2			1			
7. Issuance of a lap order	2252	Collision		4		11	5	3	1					
8. Failure to obey a meet order	2279	Collision	1			64	13	5		1		1		
9. Failure to obey a meet order	2373	Collision				30	4	1	1		1			
10. Excessive speed when entering an open switch to a siding because the instruction to take siding was omitted from the train order delivered to the train involved	2398	Derailment				6	5	1	1					
TOTAL - NEGLIGENCE - TRAIN ORDERS 10 ACCIDENTS			7	14	1	205	48	22	7	2	4	1		14
(B) Fixed Signals:														
1. Failure of the engineman of the second train properly to obey signal indications	1928	Collision		1		295					1	1		
2. Failure of the engineman of one of the trains properly to obey signal indications, probably due to either misjudgement of speed or of braking distance	1943	Collision		1		9	3	3	1	1				
3. Failure of an engineman properly to observe and obey the stop indication of a train-order and manual block signal	1957	Collision		3		29	3				2			
4. Failure of an engineman to obey signal indications	1963	Collision				79	14		1	1				
5. Failure of the train to be operated in accordance with signal indications ...	1966	Derailment				47	17	9			1			
6. Failure properly to observe and obey signal indications governing the movement of the freight train	1981	Collision		2		3	1		1					
7. Failure of the engineman of the _____ train properly to observe and obey a signal indication governing the movement of his train over a railroad crossing	1989	Collision		1		8	4		1					
8. Failure of the engineman of the passenger train properly to control the speed of his train when approaching interlocking limits and to obey the stop indication of the home signal	1990	Collision				6					1			
9. Failure of the engineman of the freight train properly to observe and obey the stop indication of a dwarf signal	2037	Collision				2	6	1		1				
10. Failure of an engineman and a fireman properly to observe and obey signal indications	2040	Collision				39	5	10				2		
11. Failure of an engineman properly to observe and obey a stop signal indication	2073	Collision				187	13			1				
12. Failure properly to observe and obey automatic block signal indications	2185	Collision				196	17	1			1	1		
13. Failure to operate the freight train in accordance with interlocking signal indications	2189	Collision				2	3					1		
14. Failure of the following train properly to observe and obey signal indications	2245	Collision			1		1		2					
15. Failure to obey a restricted-speed signal indication	2254	Collision				21	4	2		1	1			
16. Failure of second 99 to be operated in accordance with signal indications	2268	Collision				6	2	3			1	1		
17. Failure of the _____ train properly to observe and obey interlocking signal indications governing movement of the train over a railroad crossing	2336	Collision		2										

	2086	Collision		4	1	34	10	4	2						
6. Failure to obey a meet order	2107	Collision				12	4	2			1				
7. Issuance of a lap order	2252	Collision		4		11	5	3	1						
8. Failure to obey a meet order	2279	Collision	1			64	13	5		1		1			
9. Failure to obey a meet order	2373	Collision				30	4	1	1		1				
10. Excessive speed when entering an open switch to a siding because the instruction to take siding was omitted from the train order delivered to the train involved	2398	Derailment				6	5	1	1						
TOTAL - NEGLIGENCE - TRAIN ORDERS 10 ACCIDENTS			7	14	1	205	48	22	7	2	4	1			14
(B) Fixed Signals:															
1. Failure of the engineman of the second train properly to obey signal indications	1928	Collision		1		295					1	1			
2. Failure of the engineman of one of the trains properly to obey signal indications, probably due to either misjudgement of speed or of braking distance	1943	Collision		1		9	3	3	1	1					
3. Failure of an engineman properly to observe and obey the stop indication of a train-order and manual block signal	1957	Collision		3		29	3				2				
4. Failure of an engineman to obey signal indications	1963	Collision				79	14		1	1					
5. Failure of the train to be operated in accordance with signal indications ...	1966	Derailment				47	17	9			1				
6. Failure properly to observe and obey signal indications governing the movement of the freight train	1981	Collision		2		3	1		1						
7. Failure of the engineman of the _____ train properly to observe and obey a signal indication governing the movement of his train over a railroad crossing	1989	Collision		1		8	4		1						
8. Failure of the engineman of the passenger train properly to control the speed of his train when approaching interlocking limits and to obey the stop indication of the home signal	1990	Collision				6					1				
9. Failure of the engineman of the freight train properly to observe and obey the stop indication of a dwarf signal	2037	Collision				2	6	1		1					
10. Failure of an engineman and a fireman properly to observe and obey signal indications	2040	Collision				39	5	10				2			
11. Failure of an engineman properly to observe and obey a stop signal indication	2073	Collision				187	13			1					
12. Failure properly to observe and obey automatic block signal indications	2185	Collision				196	17	1			1	1			
13. Failure to operate the freight train in accordance with interlocking signal indications	2189	Collision				2	3					1			
14. Failure of the following train properly to observe and obey signal indications	2245	Collision			1		1		2						
15. Failure to obey a restricted-speed signal indication	2254	Collision				21	4	2		1	1				
16. Failure of second 59 to be operated in accordance with signal indications	2268	Collision				6	2	3			1	1			
17. Failure of the _____ train properly to observe and obey interlocking signal indications governing movement of the train over a railroad crossing	2336	Collision		2			3	1			1				
18. Failure to observe and to obey signal indications governing the movement of second 9	2360	Collision				9	2			1					
19. Train running off an open derail because of failure to observe and obey interlocking signal indications	2362	Derailment				8	10	1				1			
20. Failure to control the speed of the _____ train in compliance with interlocking signal indications	2374	Collision	1	1		16	2				1		1		
21. Failure to operate FT-56 in accordance with interlocking signal indications	2387	Collision					5				1

CAUSE (a)	I.C.C. No. (b)	KIND OF ACCIDENT (c)	PERSONS KILLED: PASSENGERS (d)	KILLED: EMPLOYEES (e)	KILLED: OTHERS (f)	INJURED: PASSENGERS (g)	INJURED: EMPLOYEES (h)	INJURED: OTHERS (i)	NUMBER OF PASSENGER TRAINS AS TO VARIOUS LENGTHS: 5 AND LESS (j)	6 TO 8 (k)	9 TO 11 (l)	12 TO 14 (m)
I. NEGLIGENCE OF EMPLOYEES:												
(C) Train Flagging:												
1. Extra 5055 occupying the main track on the time of a first class train without proper flag protection	2142	Collision		2		31	3				1	
2. Failure to provide adequate flag protection for train No. 504	2170	Collision		1		6	1	1	1	1		
3. Failure of the crew of Extra 1554 properly to protect their train while making a cross-over movement on the time of a first-class train	2203	Collision		1		3	1	1	1			
4. Failure of a second-class train to provide flag protection when occupying the main track on the time of a first-class train	2259	Collision		2		6	1	3	1			
5. Inferior train occupying the main track without authority on the time of a following first-class train and not providing proper protection	2301	Collision				9	1	1	1			
6. Failure to provide adequate flag protection after having failed to clear the time of a first-class train	2365	Collision				23	3	2			1	
TOTAL - NEGLIGENCE - TRAIN FLAGGING 6 ACCIDENTS				6		78	10	8	4	1	2	
(D) Hand Brakes:												
1. Failure to apply a sufficient number of hand brakes to secure cars left on a yard track on a descending grade	2377	Derailment				2	4	3			1	
TOTAL - NEGLIGENCE - HAND BRAKES 1 ACCIDENT						2	4	3			1	
(E) Switches:												
1. Switch being opened directly in front of an approaching train, for which the head brakeman of another train was responsible	1922	Derailment		2	1	11		2		1		
2. Open switch	1969	Collision				5	3		1			
3. Open switch	2250	Derailment		1			2		1			
4. Switch being opened directly in front of an approaching train	2294	Collision	8	3		132	1	6			1	1
5. Open switch	2323	Derailment					2		1			
TOTAL - NEGLIGENCE - SWITCHES 5 ACCIDENTS			8	6	1	148	8	8	3	1	1	1
(F) Other Forms of Negligence:												
(1) Excessive Speed:												
1. Train entering a 10° curve at a rate of speed for which the elevation of the outer rail did not provide and adequate margin of safety	1887	Derailment		2		10	4	2	1	1		
2. Excessive speed on a sharp curve	1897	Derailment	9	2		28	16	2	1			
3. Excessive speed on a sharp curve	1915	Derailment	1	2					1			
4. Failure of the conductor of the passenger train properly to control the speed of his train during a back-up movement	1916	Collision		1					1			
5. Excessive speed on a sharp curve	2038	Derailment	1	2		26	2	2		1		
6. Excessive speed on a sharp curve	2042	Derailment		2		2			1			
7. Excessive speed on a sharp curve	2139	Derailment		1		1		3			1	
8. Excessive speed on a sharp curve	2171	Derailment		1		83	12	5				1
9. Failure to control the speed of a train as required by signal indications, resulting in the train entering a short turnout at excessive speed, the route not having been properly lined for a main track movement due to obstruction of a spring switch	2183	Derailment					1		1			

3. Failure of the crew of Extra 1554 properly to protect their train while making a cross-over movement on the time of a first-class train	2203	Collision		1		3	1	1	1			
4. Failure of a second-class train to provide flag protection when occupying the main track on the time of a first-class train	2259	Collision		2		6	1	3	1			
5. Inferior train occupying the main track without authority on the time of a following first-class train and not providing proper protection	2301	Collision				9	1	1	1			
6. Failure to provide adequate flag protection after having failed to clear the time of a first-class train	2365	Collision				23	3	2			1	
TOTAL - NEGLIGENCE - TRAIN FLAGGING 6 ACCIDENTS				6		78	10	8	4	1	2	
(D) Hand Brakes:												
1. Failure to apply a sufficient number of hand brakes to secure cars left on a yard track on a descending grade	2377	Derailment				2	4	3			1

9. Failure to control the speed of a train as required by signal indications, resulting in the train entering a short turnout at excessive speed, the route not having been properly lined for a main track movement due to obstruction of a spring switch	2183	Derailment					1		1			
10. Excessive speed on a sharp curve	2198	Derailment		1		1	2			1		
11. Failure properly to control the speed of No. 388 when passing a grade signal and approaching a cross-over at the end of double track	2212	Collision					4		1			
12. Failure properly to control the speed of a train after entering an occupied block under the "Stop; then Proceed" indication of an automatic-block signal	2226	Collision	1			31	3			2		
13. Failure to comply with the speed restriction governing entry to a siding	2256	Derailment		2		9	2		1			
14. Excessive speed on a sharp curve	2399	Derailment		2		9		3	1			
TOTAL - NEGLIGENCE - EXCESSIVE SPEED 14 ACCIDENTS			12	18		201	46	17	9	5	1	1

CAUSE (a)	I.C.C. NO. (b)	KIND OF ACCIDENT (c)	PERSONS KILLED: PASSENGERS (d)	KILLED: EMPLOYES (e)	KILLED: OTHERS (f)	INJURED: PASSENGERS (g)	INJURED: EMPLOYES (h)	INJURED: OTHERS (i)	NUMBER OF PASSENGER TRAINS AS TO VARIOUS LENGTHS: 5 AND LESS (j)	6 TO 8 (k)	9 TO 11 (l)	12 TO 14 (m)	OVER 14 (n)
NEGLIGENCE OF EMPLOYES:													
(F) Other Forms of Negligence: (Continued)													
(2) Joint Failure to Protect and Failure to Run With Caution in Yard Limits:													
1. Failure to properly protect ____ switch engine 500 by flag, and by failure to operate ____ train No. 26 under proper control within yard limits	2182	Collision				7	1	2	1				
2. Failure of the passenger train to be operated under control in yard limits, and failure of the crew of the freight train fully to carry out the requirements of the flagging rule	2220	Collision		1		1		2	1				
3. Failure to provide proper protection for the preceding train, and by failure to control the speed of the following train properly	2400	Collision				3			1	1			
TOTAL-NEGLIGENCE - JOINT FAILURE TO PROTECT AND FAILURE TO RUN WITH CAUTION IN YARD LIMITS 3 ACCIDENTS				1		11	1	4	3	1			
(3) Joint Failure to Protect and Disregard of Caution or Other Signal:													
1. Primarily by the failure of an engineman properly to obey signal indications, while the passenger train flagman did not go back as far as he could have gone in the time available	1964	Collision				32	12	6				1	
2. Failure of the passenger train to be operated in accordance with the requirements of a caution card in manual-block territory and the failure of the crew of the freight train to provide adequate flag protection	2215	Collisio		2	1	1	2	7			1		
3. Failure to obey signal indications and the failure to furnish proper rear-end protection	2251	Collision				10	3	1			1	1	
4. Failure to operate the following train in accordance with signal indications, and by failure to provide adequate flag protection for the preceding train	2285	Collision	1			23	32				1	1	
5. Failure of Extra 843 to provide proper flag protection and by the failure to operate No. 325 in accordance with block-signal indications	2348	Collision				4	2	2		1			
6. Failure of the passenger train to be adequately protected by flag, and by the failure of the light engine to be operated in accordance with the signal indication	2357	Collision				15			1				
7. Failure to provide proper flag protection for the preceding train and by operation of the following train in automatic train-stop territory with the automatic train-stop and cab signal devices cut out, contrary to current instructions, resulting in an imperfectly displayed cab signal	2393	Collision				2	6				1		
TOTAL-NEGLIGENCE - JOINT FAILURE TO PROTECT AND DISREGARD OF CAUTION OR OTHER SIGNAL 7 ACCIDENTS			1	2	1	87	57	16	1	1	4	3	
(4) Failure to Identify Opposing Trains or to Clear Superior Trains:													
1. Operation of the work train on short time against an opposing superior train	1902	Collision				8	4		1				
2. Crew of an inferior train over-looking the schedule of an opposing superior train	1925	Collision	1			7	5	3	1				
3. Failure of the freight train to clear the time of an opposing superior train	1995	Collision		1	1	6	3	4	1				
4. Failure to comply with a meet order, due to failure to identify an opposing train at the meeting point	2126	Collision		5		1	4	1	1				
5. Failure of a light engine to clear the scheduled time of an opposing superior train	2205	Collision		5		5		2	1				
6. Failure of an inferior train to clear the schedule time of an opposing superior train as required by rule	2297	Collision			1	16	9	1		1			
7. Failure of an extra train to clear the time of an opposing first-class train	2388	Collision				41	6	2		1			
TOTAL-NEGLIGENCE - FAILURE TO IDENTIFY OPPOSING TRAINS OR TO CLEAR SUPERIOR TRAINS 7 ACCIDENTS			1	11	2	84	31	13	5	2			
(5) Overrunning Scheduled Meeting Point, or Failure to Clear Switch at Meeting or Passing Points:													
1. Failure of an engineman to stop at a meeting point and ascertain that the track was clear	1891	Collision				10	4			2			
2. Failure of an engineman properly to control the speed of his train when approaching a meeting point	1973	Collision				35		4					

ailure to properly protect ____ switch engine 500 by flag, and by failure to operate ____ train No. 26 under proper control within yard limits	2182	Collision				7	1	2	1					
ailure of the passenger train to be operated under control in yard limits, and failure of the crew of the freight train fully to carry out the requirements of the flagging rule	2220	Collision		1		1		2	1					
ailure to provide proper protection for the preceding train, and by failure to control the speed of the following train properly	2400	Collision				3			1	1				
TOTAL-NEGLIGENCE - JOINT FAILURE TO PROTECT AND FAILURE TO RUN WITH CAUTION IN YARD LIMITS 3 ACCIDENTS				1		11	1	4	3	1				4
Joint Failure to Protect and Disregard of Caution or Other Signal:														
rimarily by the failure of an engineman properly to obey signal indications, while the passenger train flagman did not go back as far as he could have gone in the time available	1964	Collision				32	12	6			1			
ailure of the passenger train to be operated in accordance with the requirements of a caution card in manual-block territory and the failure of the crew of the freight train to provide adequate flag protection	2215	Collisio		2	1	1	2	7			1			
ailure to obey signal indications and the failure to furnish proper rear-end protection	2251	Collision				10	3	1			1	1		
ailure to operate the following train in accordance with signal indications, and by failure to provide adequate flag protection for the preceding train	2285	Collision	1			23	32				1	1		
ailure of Extra 843 to provide proper flag protection and by the failure to operate No. 325 in accordance with block-signal indications	2348	Collision				4	2	2		1				
ailure of the passenger train to be adequately protected by flag, and by the failure of the light engine to be operated in accordance with the signal indication	2357	Collision				15			1					
ailure to provide proper flag protection for the preceding train and by operation of the following train in automatic train-stop territory with the automatic train-stop and cab signal devices cut out, contrary to current instructions, resulting in an imperfectly displayed cab signal	2393	Collision				2	6				1			
TOTAL-NEGLIGENCE - JOINT FAILURE TO PROTECT AND DISREGARD OF CAUTION OR OTHER SIGNAL 7 ACCIDENTS			1	2	1	87	57	16	1	1	4	3		9
Failure to Identify Opposing Trains or to Clear Superior Trains:														
eration of the work train on short time against an opposing superior train	1902	Collision				8	4		1					
ue of an inferior train over-looking the schedule of an opposing superior train	1925	Collision	1			7	5	3	1					
ailure of the freight train to clear the time of an opposing superior train	1995	Collision		1	1	6	3	4	1					
ailure to comply with a meet order, due to failure to identify an opposing train at the meeting point	2126	Collision		5		1	4	1	1					
ailure of a light engine to clear the scheduled time of an opposing superior train	2205	Collision		5		5		2	1					
ailure of an inferior train to clear the schedule time of an opposing superior train as required by rule	2297	Collision			1	16	9	1		1				
ailure of an extra train to clear the time of an opposing first-class train	2388	Collision				41	6	2		1				
TOTAL-NEGLIGENCE - FAILURE TO IDENTIFY OPPOSING TRAINS OR TO CLEAR SUPERIOR TRAINS 7 ACCIDENTS			1	11	2	84	31	13	5	2				7
Overrunning Scheduled Meeting Point, or Failure to Clear Switch at Meeting or Passing Points:														
ailure of an engineman to stop at a meeting point and ascertain that the track was clear	1891	Collision				10	4			2				
ailure of an engineman properly to control the speed of his train when approaching a meeting point	1973	Collision				35		4					1	
ain running past its timetable meeting point with an opposing train without authority	2063	Collision	1	1		11	3		2					
eight train fouling the clearance point of a main-track switch directly in front of an approaching superior train	2177	Collision					2	1			1			
ailure of the superior train to stop clear of the switch used by the train being met in entering the siding at a train-order meeting point	2253	Collision		1		1	3			1				
ailure to control properly the speed of a freight train when approaching a meeting point	2372	Collision				2	1	2	1					
ailure to control the speed of a train properly when approaching a meeting point	2380	Collision				27	3	2			1			
TOTAL - NEGLIGENCE - OVERRUNNING SCHEDULED MEETING POINT, OR FAILURE TO CLEAR SWITCH AT MEETING OR PASSING POINTS 7 ACCIDENTS			1	2		86	16	9	3	3	2		1	9

CAUSE (a)	I.C.C. NO. (b)	KIND OF ACCIDENT (c)	PERSONS KILLED: PASSENGERS (d)	EMPLOYEES (e)	OTHERS (f)	PERSONS INJURED: PASSENGERS (g)	EMPLOYEES (h)	OTHERS (i)	NUMBER OF PASSENGER TRAINS INVOLVED AS TO VARIOUS LENGTHS IN CARS: 5 AND LESS (j)	6 TO 8 (k)	9 TO 11 (l)	12 TO 14 (m)	OVER 14 CARS (n)	T
I. NEGLIGENCE OF EMPLOYES:														
(F) Other Forms of Negligence: (Continued)														
(6) All Other Negligence:														
1. The gas-electric car departing from the station on the main track instead of another track designated in a clearance card and in verbal instructions received from the operator; also by the failure of the enginemen of both trains involved to move under proper control within yard limits	1918	Collision				6	7		2					
2. Failure of the engineman and fireman of the light engine to know the correct time, with the result that their engine failed to clear the main track for an opposing superior train	1930	Collision		3		1	2	1	1					
3. Running through a derail switch, due to the failure of the flagman of the helper engine to close the passing track switch after his engine had entered the main track and by the failure of both enginemen to note that their train had entered the open switch and was moving on the passing track	1961	Derailment		1						1				
4. Failure of a freight train to be properly protected by flag and by the failure of a passenger train to be operated under proper control in view of the fact that the crew held an order directing the freight train to run ahead of them until overtaken	1982	Collision				8	6	3	1					
5. Operation of a motor car on the time of an opposing overdue first-class train without authority or protection	1998	Misc.Train		1			1		1					
6. Operation of an extra train on the time of a following superior train without authority and without adequate flag protection	2030	Collision		1		5	1		1					
7. Operation of an extra train on close time ahead of a following superior train, and by failure properly to protect a back-up movement	2035	Collision				10	3		1					
8. Failure of the light engine to clear the time of an opposing overdue superior train, the engineman having become confused as to the schedule time of that train; a contributing cause was the failure of the passenger train to be brought to a stop when the engineman observed the headlight of the opposing light engine	2101	Collision		1		13	7	1	1					
9. Failure of the crew of the passenger train to obey a meet order and to comply with block-signal rules	2103	Collision				2	8	3	1					
10. Failure of a motorman-conductor to approach a meeting point under proper control in view of existing conditions	2114	Collision		1		8	1		2					
11. Failure of the ____ train to be brought under control until it was too late to avoid colliding with the train ahead, and by the lack of any system to provide for the proper spacing of trains	2121	Collision	10			58	1		1	1				
12. Failure properly to observe and obey signal indications and to approach a meeting point under control	2128	Collision		3		2	5			2				
13. Failure to obey a wait order; a contributing cause was the failure of an extra train to clear the time of an opposing regular train as required by rule	2166	Collision		1		16	5	1	1					
14. Switch engine occupying the main track within yard limits on the time of a first-class train without authority or protection	2192	Collision				3			1					
15. Failure of a train crew to discover that a coupling between two cuts of cars had not been properly made, and failure to have a member of the train crew stationed on the leading car of the cut of cars being pushed into the storage track	2195	Collision		2							1			
16. Failure of the freight train crew to provide adequate rear-end protection, and by the action of the dispatcher in authorizing the passenger train to enter an occupied block under a clear manual block signal	2246	Collision				1	1			1				
17. Failure of an inferior train to clear the time of a superior train and to furnish flag protection as required by the rules, and the failure of the superior train to be stopped short of a block signal displaying a stop indication	2264	Collision				12	2	4	1					
18. Leverman failing definitely to ascertain that the route was properly lined before clearing a signal for a passenger train to proceed through the interlocking, resulting in the diversion of that train														

(F) Other Forms of Negligence: (Continued)

(6) All Other Negligence:

1. The gas-electric car departing from the station on the main track instead of another track designated in a clearance card and in verbal instructions received from the operator; also by the failure of the enginemen of both trains involved to move under proper control within yard limits	1918	Collision				6	7		2				
2. Failure of the engineman and fireman of the light engine to know the correct time, with the result that their engine failed to clear the main track for an opposing superior train	1930	Collision		3		1	2	1	1				
3. Running through a derail switch, due to the failure of the flagman of the helper engine to close the passing track switch after his engine had entered the main track and by the failure of both enginemen to note that their train had entered the open switch and was moving on the passing track	1961	Derailment		1						1			
4. Failure of a freight train to be properly protected by flag and by the failure of a passenger train to be operated under proper control in view of the fact that the crew held an order directing the freight train to run ahead of them until overtaken	1982	Collision				8	6	3	1				
5. Operation of a motor car on the time of an opposing overdue first-class train without authority or protection	1998	Misc Train		1			1		1				
6. Operation of an extra train on the time of a following superior train without authority and without adequate flag protection	2030	Collision		1		5	1		1				
7. Operation of an extra train on close time ahead of a following superior train, and by failure properly to protect a back-up movement	2035	Collision				10	3		1				
8. Failure of the light engine to clear the time of an opposing overdue superior train, the engineman having become confused as to the schedule time of that train; a contributing cause was the failure of the passenger train to be brought to a stop when the engineman observed the headlight of the opposing light engine	2101	Collision		1		13	7	1	1				
9. Failure of the crew of the passenger train to obey a meet order and to comply with block-signal rules	2103	Collision				2	8	3	1				
10. Failure of a motorman-conductor to approach a meeting point under proper control in view of existing conditions	2114	Collision		1		8	1		2				
11. Failure of the _____ train to be brought under control until it was too late to avoid colliding with the train ahead, and by the lack of any system to provide for the proper spacing of trains	2121	Collision	10			58	1		1	1			
12. Failure properly to observe and obey signal indications and to approach a meeting point under control	2128	Collision		3		2	5			2			
13. Failure to obey a wait order; a contributing cause was the failure of an extra train to clear the time of an opposing regular train as required by rule	2166	Collision		1		16	5	1	1				
14. Switch engine occupying the main track within yard limits on the time of a first-class train without authority or protection	2192	Collision				3			1				
15. Failure of a train crew to discover that a coupling between two cuts of cars had not been properly made, and failure to have a member of the train crew stationed on the leading car of the cut of cars being pushed into the storage track	2195	Collision		2							1		
16. Failure of the freight train crew to provide adequate rear-end protection, and by the action of the dispatcher in authorizing the passenger train to enter an occupied block under a clear manual block signal	2246	Collision				1	1			1			
17. Failure of an inferior train to clear the time of a superior train and to furnish flag protection as required by the rules, and the failure of the superior train to be stopped short of a block signal displaying a stop indication	2264	Collision				12	2	4	1				
18. Leverman failing definitely to ascertain that the route was properly lined before clearing a signal for a passenger train to proceed through the interlocking, resulting in the diversion of that train to an occupied nonsignaled yard track	2273	Collision				5	1			1			
19. Lap of authority of two opposing trains due to the lack of some understanding of the method of operation, and by irregular practice in a train dispatching office	2284	Collision		1			1		1				
20. Failure to maintain a proper lookout from both trains and to proceed under proper control prepared to stop when approaching a railroad crossing at grade	2306	Collision				1	8	1	1				
21. Failure to route a westbound train on the westward track as intended, failure to correctly record its movement on the eastward track over a route which had been set up for a preceding train, and subsequent authorization for an east-bound train to pass a home interlocking signal displaying stop, when the eastward track was occupied by the opposing train	2307	Collision		1		10	7	3	1				
22. Failure of the _____ train to be operated under control prepared to stop at a railroad crossing at grade	2309	Collision				185					1	1	

CAUSE (a)	I.C.C. NO. (b)	KIND OF ACCIDENT (c)	PERSONS KILLED: PASSENGERS (d)	KILLED: EMPLOYEES (e)	KILLED: OTHERS (f)	INJURED: PASSENGERS (g)	INJURED: EMPLOYEES (h)	INJURED: OTHERS (i)	NUMBER OF PASSENGER TRAINS INVOLVED AS TO VARIOUS LENGTHS IN CARS: 5 AND LESS (j)	6 TO 8 (k)	9 TO 11 (l)	12 TO 14 (m)	OVER 14 CARS (n)	TOTAL (o)
NEGLIGENCE OF EMPLOYEES:														
Other Forms of Negligence: (Continued)														
All Other Negligence: (Continued)														
Failure properly to obey signal indications and failure to move under proper control within yard limits prepared to stop unless the track was seen or known to be clear	2322	Collision					5			1				
Failure of the ____ train to stop at a railroad crossing at grade, which was occupied by a train on a conflicting route	2324	Collision				5	1		1					
Failure of No. 236 to clear the time of an opposing superior train and to obey the stop indication of an automatic block signal, and probably also by failure of No. 107 properly to observe and obey an approach signal indication	2331	Collision		2	1	30	4	4			1			
Failure to secure a car on a grade, which resulted in the car sideswiping the cab of the engine, damaging air, steam, and hot water connections, which compelled the engine crew to leave the engine without closing the throttle and in turn allowed the engine to move out of control	2333	Collision		2		11	2	4	1					
Improper manipulation by an inexperienced assistant during the temporary absence of the regular operator of the controlling lever of the ditcher of the time of a switching movement of the work train, permitting the boom to foul the adjacent track and strike the passenger train, and by failure to set the hand brake properly to prevent the lateral movement of the ditcher	2352	Misc.Train		1		45	5	1			1			
Failure to furnish proper flag protection for the first train, and by failure properly to control the speed of the second train within subdivision terminal limits because of depending upon a signal which displayed a false proceed indication	2379	Collision				164	16					2		
Junction switch being opened without authority or instructions, which resulted in diverting an approaching train to an occupied track, and failure to control the speed of the passenger train properly when approaching a junction and when operating against the current of traffic within yard limits	2386	Collision		2		25	8	5	1					
Yard engine backing into a main track turn-out without authority and striking the side of a moving passenger train	2389	Collision	3			8	3				1			
Track motor car fouling the main track on the time of a first-class train	2394	Derailment		1		6	2			1				
TOTAL - ALL OTHER NEGLIGENCE 31 ACCIDENTS			13	24	1	640	113	31	21	8	5	3		37

III. DEFECTS IN OR IMPROPER MAINTENANCE OF WAY AND STRUCTURES:												
(A) Bridges, Trestles, Culverts, and Tunnels:												
1. Failure of a bridge	2225	Derailment	2			70	2		1			
2. Collapse of a truss span of bridge 97.23 as a result of the pile bents supporting the east end of the span having been pulled out of position by the drifting of a caisson, resulting in the fouling of bridge bents by anchor cables attached to the caisson	2378	Derailment		2					1			
TOTAL - BRIDGES, TRESTLES, CULVERTS AND TUNNELS 2 ACCIDENTS			2	2		70	2		2			
(B) Rails and Joints:												
1. Broken rail	1937	Derailment	1	1		6	2				2	
2. Broken rail	2022	Derailment		1			2		1			
3. Broken rail	2029	Derailment				5				1		
4. Broken rail	2068	Derailment			2	18						1
5. Broken rail	2112	Derailment		1	1	18	5	6				1
6. Broken rail	2190	Derailment				40	7				1	
7. Broken rail, due to transverse fissures	2218	Derailment				5	3		1			
8. Broken rail, because of the presence of a transverse fissure	2335	Derailment				69	2	5				1
9. Broken rail, resulting from the presence of transverse fissures	2401	Derailment				28	2	12			1	
TOTAL - RAILS AND JOINTS 9 ACCIDENTS			1	3	3	189	23	23	2	1	4	3
(C) Frogs and Switches:												
1. Split switch, due to the point opening under a moving train as the result of a broken head-rod	2317	Derailment					2	2			1	
2. Switch opening under a train as a result of a broken switch lug	2321	Derailment				33	2	1				1
TOTAL - FROGS AND SWITCHES 2 ACCIDENTS						35	4	3	9		1	1
(D) Interlocking and Block Signal System:												
1. False proceed signal indications	2046	Collision		1		41	9	7	1	1		
TOTAL - INTERLOCKING AND BLOCK SIGNAL SYSTEM 1 ACCIDENT				1		41	9	7	1	1		
(E) Miscellaneous:												
1. Spread rails, due to track not being adequately maintained	2018	Derailment				1					1	
2. Loose guard rail, but it could not be determined how the guard rail became loosened	2025	Derailment		1			2	1	1			
3. Kinked track	2172	Derailment		1		2	2	3	1			
4. Spreading of the track; apparently due to failure of rail fastenings used on track of special construction	2236	Derailment				30	4		1			
5. Spread rails, due to the track not being properly maintained	2271	Derailment		2					1			
6. Primarily by irregularities in the track	2318	Derailment				16	1				1	
7. Spread rails, on account of inadequate track maintenance	2356	Derailment					2			1		
TOTAL - MISCELLANEOUS 7 ACCIDENTS				4		49	11	4	4	1	2	
GRAND TOTAL - DEFECTS IN OR IMPROPER MAINTENANCE OF WAY AND STRUCTURES-21 ACCIDENTS			3	10	3	384	49	37	9	3	7	4

CAUSE (a)	I.C.C. NO. (b)	KIND OF ACCIDENT (c)	PERSONS KILLED: PASSENGERS (d)	EMPLOYEES (e)	OTHERS (f)	INJURED: PASSENGERS (g)	EMPLOYEES (h)	OTHERS (i)	NUMBER OF PASSENGER T AS TO VARIOUS LENG: 5 AND LESS (j)	6 TO 8 (k)	9 TO 11 (l)	12 TO 14 (m)
V. COLLISIONS WITH VEHICLES AT GRADE CROSSINGS:												
1. Motor truck being driven upon a grade crossing directly in front of an approaching train	1882	Derailment		1	2		1		1			
2. Motor truck being driven upon a grade crossing directly in front of an approaching passenger train resulting in derailment of train on adjacent track	1884	Derailment		1	1					1		1
3. Train striking an automobile which had run off the highway at a grade crossing and had become stalled across the track	1886	Derailment		2						1		
4. Motor truck and trailer being driven on a railroad crossing at grade directly in front of an approaching train	1888	Derailment		1			1		1			
5. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching passenger train	1896	Derailment		2	1	4	1	1			1	
6. Train striking an automobile which had turned off the highway at a grade crossing and had become stalled on the track	1923	Derailment		1		1	1				1	
7. Train striking an automobile which had been shoved upon the track by a following automobile while it was standing at a highway grade crossing waiting for the train to pass	1924	Derailment			5	5	2	1	1			
8. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching passenger train	1933	Derailment		1	1	1		1			1	
9. Train striking an automobile which had become stalled on the track adjacent to a highway grade crossing	1934	Derailment		2		7	1	4			1	
10. Failure of a crossing watchman to lower the gates at the crossing when a train was approaching	1968	Misc.Train		3		6	1	2	1			
11. School bus being driven upon a railroad crossing at grade directly in front of an approaching train, due primarily to the failure of the driver to take adequate precautions before starting over the crossing, and to inadequate protection of the crossing which resulted from failure of responsible authorities to enforce, and of the railroad company to obey, the law requiring maintenance of a watchman until 12 o-clock midnight	1978	Misc.Train	9		14			15			1	
12. Motor vehicle being driven upon a highway crossing at grade directly in front of an approaching train	1994	Derailment		1		27	9	1			1	
13. Automobile being driven upon a railroad crossing at grade directly in front of an approaching passenger train	2012	Derailment		3	2	5	4	7		1		
14. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching train	2014	Misc.Train			1		2		1			
15. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching train	201	Derailment				9	7	4				
16. Failure of the official in charge of the movement of the motor truck and trailer to remain at the crossing and provide adequate protection	2054	Misc.Train				1	8				1	
17. The failure of the bus driver to stop as required by law and also by the rules of the bus company and to know that no train was approaching before attempting to proceed over a railway crossing at grade. Contributing causes were the failure of local authorities to enforce an ordinance making it unlawful for trains to operate within the corporate limits at speeds in excess of 20 miles per hour, and the failure of the railway company to require its employes to observe the provisions of the ordinance	2056	Derailment			11			2	1			
18. Motor truck being driven upon a highway grade crossing just as the train was approaching	2099	Misc.Train			1		2		1			
19. Road scraper being driven on a highway grade crossing directly in front of an approaching train	2078	Misc.Train			1		1		1			
20. Train striking an automobile which had turned off the highway and had become stalled on the track	2093	Derailment			1	17	2				1	
21. Automobile being driven upon a highway crossing directly in front of an approaching train	2113	Derailment			1				1			
22. Motor truck being driven upon a private crossing directly in front of an approaching train	2115	Derailment			1	12	4		1			
23. Action of the driver of a motor vehicle in starting over a railroad crossing at grade at the time that an approaching train started to pass over the crossing	2137	Misc.Train			1			2	1			
24. Motor truck being driven upon a highway crossing at grade directly in front of an approaching train	2148	Derailment		1	1	5	1		1			
25. Automobile being driven on a [illegible]												

IV. COLLISIONS WITH VEHICLES AT GRADE CROSSINGS:

1. Motor truck being driven upon a grade crossing directly in front of an approaching train	1882	Derailment		1	2		1		1			
2. Motor truck being driven upon a grade crossing directly in front of an approaching passenger train resulting in derailment of train on adjacent track	1884	Derailment		1	1					1		1
3. Train striking an automobile which had run off the highway at a grade crossing and had become stalled across the track	1886	Derailment		2						1		
4. Motor truck and trailer being driven on a railroad crossing at grade directly in front of an approaching train	1888	Derailment		1			1		1			
5. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching passenger train	1896	Derailment		2	1	4	1	1			1	
6. Train striking an automobile which had turned off the highway at a grade crossing and had become stalled on the track	1923	Derailment		1		1	1				1	
7. Train striking an automobile which had been shoved upon the track by a following automobile while it was standing at a highway grade crossing waiting for the train to pass	1924	Derailment			5	5	2	1	1			
8. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching passenger train	1933	Derailment		1	1	1		1			1	
9. Train striking an automobile which had become stalled on the track adjacent to a highway grade crossing	1934	Derailment		2		7	1	4			1	
10. Failure of a crossing watchman to lower the gates at the crossing when a train was approaching	1968	Misc.Train		3		6	1	2	1			
11. School bus being driven upon a railroad crossing at grade directly in front of an approaching train, due primarily to the failure of the driver to take adequate precautions before starting over the crossing, and to inadequate protection of the crossing which resulted from failure of responsible authorities to enforce, and of the railroad company to obey, the law requiring maintenance of a watchman until 12 o-clock midnight	1978	Misc.Train			14			15			1	
12. Motor vehicle being driven upon a highway crossing at grade directly in front of an approaching train	1994	Derailment		1		27	9	1			1	
13. Automobile being driven upon a railroad crossing at grade directly in front of an approaching passenger train	2012	Derailment		3	2	5	4	7		1		
14. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching train	2014	Misc.Train			1		2		1			
15. Motor truck being driven upon a railroad crossing at grade directly in front of an approaching train	201	Derailment				9	7	2				
16. Failure of the official in charge of the movement of the motor truck and trailer to remain at the crossing and provide adequate protection	2054	Misc.Train				1	8				1	
17. The failure of the bus driver to stop as required by law and also by the rules of the bus company and to know that no train was approaching before attempting to proceed over a railway crossing at grade. Contributing causes were the failure of local authorities to enforce an ordinance making it unlawful for trains to operate within the corporate limits at speeds in excess of 20 miles per hour, and the failure of the railway company to require its employes to observe the provisions of the ordinance	2056	Derailment			11			2	1			
18. Motor truck being driven upon a highway grade crossing just as the train was approaching	2059	Misc.Train			1		2		1			
19. Road scraper being driven on a highway grade crossing directly in front of an approaching train	2078	Misc.Train			1		1		1			
20. Train striking an automobile which had turned off the highway and had become stalled on the track	2093	Derailment			1	17	2				1	
21. Automobile being driven upon a highway crossing directly in front of an approaching train	2113	Derailment			1				1			
22. Motor truck being driven upon a private crossing directly in front of an approaching train	2115	Derailment			1	12	4		1			
23. Action of the driver of a motor vehicle in starting over a railroad crossing at grade at the time that an approaching train started to pass over the crossing	2137	Misc.Train			1			2	1			
24. Motor truck being driven upon a highway crossing at grade directly in front of an approaching train	2148	Derailment		1	1	5	1		1			
25. Automobile being driven on a railroad crossing at grade directly in front of an approaching train, in disregard of signals indicating approach of a train	2159	Derailment		2		29	9	2		1		
26. Motor truck being driven upon a private crossing directly in front of an approaching train	2164	Misc.Train			1		2		1

	1923						YEAR 1923			
(1)	1-1	Yuma	S-g	2-266	46	15	W.W.Pettis	Conductor	30	Stepped on rock getting off engine.
(2)	1-2	Tully	S-g	L-3660-W	57	3	C.H.Sellars	Conductor	7	Fell when defective hand hold came loose
(3)	1-8	Gila	S-e	2-426	58	2	C.E.Jacobs	Brakeman	30	Shoved drawbar over with foot, coupling engine to caboose.
(4)	1-20	Stockham	D-4	L-3639-W	58	8	H.A.Miller	Fireman	25	Engine derailed at switch.
(5)	1-24	Yuma	S-j	L-2820-W	57	Standing	T.Heath	Conductor	20	Fell and struck head on some part of train equipment.
(6)	1-28	Tucson	FS-j	L-2797-W	69	4	T.A.Tinney H.R.Rutledge	Conductor Brakeman	8 13	Train parted due to some one stepping on cutting lever caus rough stop of train.
(7)	2-5	Wellton	S-g	1-426	58	22	M.J.Hennessy	Investigator	4	Attempting board caboose, struck derail stand.
(8)	3-4	San Simon	S-g	L-3654-W	67	Standing	B.F.Oliver	Brakeman	14	Fell from bridge when detraining from train.
(9)	3-10	Ethyl	S-g	3-412	66	Standing	F.S.Thomas	Brakeman	5	Fell passing over between cars in train.
(10)	3-13	Rankin	S-j	L-3669-W	66	25	J.Broome	Trk.walker	13	Struck by pipe in passing train.
(11)	3-24	Morales	FS-j	482	41	Standing	O.C.Boone	Brakeman	30	Lost balance and fell from top of caboose to ground.
(12)	3-26	Estrella	FS-j	L-2547-W	70	12	L.Bean	B&B Cook	14	Undesired emergency caused rough stop of train.
(13)	3-26	Bowie	S-e	L-3659-W	66	25	D.I.Robinson	Fireman	5	Sand in eye, standing out engine.
(14)	4-11	Ethyl	S-j	L-3660-W	53	Standing	P.H.Holden	Spec.Officer	14	Shot by negro trespasser.
(15)	4-12	Aztec	FS-j	L-2822-W	53	5	D.D.White	Brakeman	10	Slack run in as train was being brought to a stop, injuring brakeman in cab.
(16)	4-29	Aztec	FS-j	1-412	68	6	R.L.Hutton	Brakeman	6	Undesired emergency as train was being brought to a stop, injured brakeman in caboose.
(17)	5-1	Benton	S-j	L-2739-W	67	20	J.H.Hamilton	Brakeman	4	Flying particle of metal in eye.
(18)	5-6	Yuma	S-e	2-426	55	Standing	J.F.Hundy	Brakeman	7	Struck on chest when switch handle flew up.
(19)	5-23	Stockham	S-j	L-2752-W	68	Standing	R.T.Burr	Brakeman	4	Strained ligament in leg while running.
(20)	6-14	Tucson	S-e	1-422	67	Standing	L.J.Murphree	Engineer	16	Swinging through cab window to ground.
(21)	6-26	Maricopa	S-e	L-2595-W	65	35	A.M.Isaacs	Fireman	6	Burned by escaping steam from squirt hose.
(22)	6-28	Tully	FS-j	L-3649-W	58	25	J.Hunker	Brakeman	7	Undesired emergency caused sudden stop and injury to brakeman in caboose.
(23)	7-5	Lenchs	S-e	L-3252-W	49	30	J.Weigel	Engineer	7	Foreign particle in eye.
(24)	7-7	Xavier	S-d	L-2752-W	12	2	C.J.Broyles	Brakeman	7	Slipped and fell while setting hand brake.
(25)	7-7	Ben	S-j	2-92	41	5	A.E.Andrews	Brakeman	20	Struck by piece of lumber shifting on car.
(26)	7-10	Patio	C-b	L-2583-W	47	3	P.Morales	Car repr.	3	Train collided with cut of standing cars. Injured man riding on top of train and caught in wreckage.
(27)	7-13	Casa Grande	S-g	2-244	54	10	H.E.Tudor	Brakeman	20	Fell attempting to board train.
(28)	7-23	Bowie	FS-j	L-3635-W	63	6	E.Burns	Water serv. foreman	21	Rough stop threw injured man against stove in outfit car.

(4)	1-20	Stockham	B-4	L-3639-W	58	8	H.A.Miller	Fireman	25	Engine derailed at switch.
(5)	1-24	Tyee	S-j	L-3820-W	57	Standing	T.Smith	Conductor	20	Fell and struck head on some part of train equipment.
(6)	1-28	Tucson	FS-j	L-2794-W	69	"	T.A.Tinney H.R.Rutledge	Conductor Brakeman	8 13	Train parted due to some one stepping on setting lever caused rough stop of train.
(7)	2-5	Wellton	S-g	1-426	58	22	H.J.Hennessy	Investigator	4	Attempting board caboose, struck derail stand.
(8)	3-4	San Simon	S-g	L-3654-W	67	Standing	B.F.Oliver	Brakeman	14	Fell from bridge when detraining from train.
(9)	3-10	Sibyl	S-g	3-412	66	Standing	F.S.Thomas	Brakeman	5	Fell passing over between cars in train.
(10)	3-13	Ruthin	S-j	L-3665-W	66	25	J.Broome	Trimmer	13	Struck by pipe in passing train.
(11)	3-24	Markleo	FS-j	482	41	Standing	G.C.Boone	Brakeman	30	Lost balance and fell from top of caboose to ground.
(12)	3-26	Estrella	FS-j	L-2541-W	70	12	L.Dunn	R&B Cook	14	Undesired emergency caused rough stop of train.
(13)	3-26	Bowie	S-c	L-2639-W	66	25	D.I.Robinson	Fireman	5	Sand in eye, causing out engine.
(14)	4-11	Sybil	S-j	L-3660-W	53	Standing	P.H.Holden	Spec.Officer	14	Shot by negro trespasser.
(15)	4-12	Artec	FS-j	L-2822-W	53	5	D.D.White	Brakeman	10	Slack run in as train was being brought to a stop, injuring brakeman in cab.
(16)	4-29	Artec	FS-j	1-412	68	6	R.L.Estine	Brakeman	6	Undesired emergency as train was being brought to a stop, injured brakeman in caboose.
(17)	5-1	Hunton	S-j	L-2739-W	67	20	J.H.Hamilton	Brakeman	4	Flying particle of metal in eye.
(18)	5-6	Tacna	S-c	2-426	55	Standing	J.F.Hundy	Brakeman	7	Struck on chest when switch handle flew up.
(19)	5-23	Stockham	S-j	L-2752-W	68	Standing	R.T.Burr	Brakeman	4	Strained ligament in leg while running.
(20)	6-14	Tucson	S-c	1-422	67	Standing	L.J.Murphree	Engineer	16	Swinging through cab window to ground.
(21)	6-26	Marana	S-c	L-2595-W	65	35	A.H.Inanes	Fireman	6	Burned by escaping steam from squirt hose.
(22)	6-28	Tully	FS-j	L-3647-W	58	25	J.Hunter	Brakeman	7	Undesired emergency caused sudden stop and injury to brakeman in caboose.
(23)	7-5	Lanchu	S-c	L-3252-W	49	30	J.Weigel	Engineer	7	Foreign particle in eye.
(24)	7-7	Xavier	S-d	L-2752-W	12	2	C.J.Broyles	Brakeman	7	Slipped and fell while setting hand brake.
(25)	7-7	Box	S-j	2-92	41	5	A.E.Andrews	Brakeman	20	Struck by piece of lumber shifting on car.
(26)	7-10	Patio	C-b	L-2583-W	47	3	P.Rosales	Car repr.	3	Train collided with end of standing cars. Injured man riding on top of train and caught in wreckage.
(27)	7-13	Casa Grande	S-g	3-244	54	10	H.E.Tudor	Brakeman	20	Fell attempting to board train.
(28)	7-23	Bowie	FS-j	L-3615-W	63	6	E.Burns	Water serv. foreman	21	Rough stop threw injured man against stove in outfit car.
(29)	8-1	Piedra	S-g	L-2757-W	62	8	H.W.Lemon	Conductor	21	Ankle broken getting off caboose.
(30)	8-21	Tucson	S-d	244	69	Standing	L.L.Darnell	Brakeman	20	Fell from car while releasing hand brake.
(31)	9-17	Araby	S-j	L-2782-W	67	10	D.B.Ross	Brakeman	7	Sand in eye.
(32)	9-20	Bowie	S-j	92	57	25	C.J.Broyles	Brakeman	6	Sand in eye.
(33)	9-24	Lava	FS-j	92	48	20	A.J.Young	Brakeman	20	Slack action caused brakeman to fall while walking over train.
(34)	10-3	Marana	S-j	L-2774-W	67	Standing	W.B.Williams	Brakeman	21	Strained back while lifting a hot box cooler.
(35)	10-14	Dragoon	S-g	244	62	Standing	O.M.Barringer	Brakeman	14	Stepped off bridge when getting off car.
(36)	10-16	Stanwix	FS-j	L-2724-W	62	4	D.A.Quinn	Brakeman	4	Undesired emergency caused sudden stop, injured brakeman in caboose.
(37)	11-19	Irene	S-g	92	62	Standing	E.L.Hale	Brakeman	12	Lost hand hold and fell down embankment.
(38)	11-19	Stanwix	S-g	1-92	50	12	H.C.Richardson	Brakeman	7	Slipped and fell to ground attempting to get on train.
(39)	11-23	Vamar	S-j	L-3641-W	51	20	R.R.Troutman	Brakeman	20	Slipped and fell walking over top of train.
(40)	11-26	Dragoon	S-g	1-412	56	5 to 6	A.C.Knowles	Brakeman	10	Stepped off trestle getting off car in train.
(41)	12-2	Bowie	-g	L-3647-W	66	10	D.L.Agnew,	Brakeman	5	Struck knee getting on the train.
(42)	12-23	Benson	-j	244	61	Standing	C.J.Franklin	Brakeman	20	Slipped and fell, stepping from one car to another.

A = caused from sudden stopping, starting, lurch, or jerk of car or train.

	1924						YEAR 1924			
(43)	1-3	Pantano	FS-j	X-3665-W	65	2 to 3	J.W.Wonner	Conductor	20	Undesired emergency caused sudden stop and injury to conductor in caboose.
(44)	1-20	Maricopa	S-j	X-2851-W	65	6 to 8	G.W.White	Brakeman	30	Fell from pilot of engine.
(45)	1-21	Patio	S-g	2-412	55	10	R.L.Shield	Brakeman	12	Foot slipped attempting to board train.
(46)	1-29	Wymola	S-j	244	50	15	C.W.McCorkle	Brakeman	20	Ties in car rolled and caught brakeman.
(47)	1-31	Casa Grande	S-j	1-412	66	10	H.Showers	Brakeman	4	Stepped in hole or low spot along track.
(48)	2-9	Continental	S-j	482	20	30	L.Y.Pironi	Brakeman	30	Hot sand in eye.
(49)	2-10	San Simon	S-g	X-3667-W	61	Standing	B.E.Hunt	Brakeman	7	Sprained ankle getting off car.
(50)	2-27	Alrich	S-g	X-3647-W	67	Standing	D.S.Bull	Brakeman	30	Slipped and fell from car while getting off.
(51)	3-1	Dome	FS-j	X-2686-W	64	8	G.C.Davis	Brakeman	9	Run-in of slack as train was stopping injured brakeman in caboose.
(52)	3-4	Patagoni	S-g	483	4	5	H.M.Wilkins	Brakeman	13	Foot slipped on ladder while getting off car.
(53)	4-3	Pembroke	S-j	3-412	50	2	O.H.Clayton	Conductor	6	Slipped and strained tendon in leg while walking.
(54)	4-4	Karro	S-i	X-3728-W	64	10	R.E.Simmons	Brakeman	Permanent	Fell under train while bleeding brake cylinder on car.
(55)	4-20	Willcox	S-j	X-3237-W	39	Standing	C.H.Sollars	Conductor	15	Stepped on protruding nail.
(56)	4-23	Theba	FS-d	X-2598-W	64	6	C.C.Easterling	Brakeman	10	Thrown against end of car and brake wheel while setting hand brake, when car he was riding struck another cut of cars.
(57)	5-15	Dragoon	S-c	2-412	64	Standing	J.G.Blaise	Fireman	30	Fell from trestle getting off engine.
(58)	5-25	Polvo	FS-j	X-3638-W	53	25	E.J.Durnil	Conductor	9	Undesired emergency caused sudden stop and injury to conductor in caboose.
(59)	5-28	Lusena	S-g	1-412	65	8 to 12	B.W.Edwards	Conductor	20	Foot slipped on ballast getting on moving train.
(60)	6-18	Maricopa	FS-j	X-2557-W	66	6	C.M.Pilcher	Brakeman	14	Run in of slack as train was stopping injured brakeman in caboose.
(61)	6-18	Estrella	FS-j	1-244	67	4	J.M.Wonner	Conductor	14	Thrown against end of caboose when caboose made rough coupling to train.
(62)	6-27	Mohawk	S-g	X-2826-W	66	1	R.L.Shields	Brakeman	Died	Fell from bridge to ground when getting off train.
(63)	7-18	Lava	S-j	2-426	47	7 to 8	M.M.McBoon	Brakeman	20	Caught foot between draw bar and deadwood.
(64)	7-20	Tucson	S-d	X-2725-W	67	Standing	V.B.Hendry	Brakeman	20	Fell from car while releasing hand brake.
(65)	7-23	Benson	S-j	244	59	10	G.M.Barringer	Brakeman	5	Flying particle of steel in eye.
(66)	9-10	Tubac	S-j	X-2942-W	60	4	J.H.Hamilton	Brakeman	8	Stepped in hole while bleeding brake cylinder on car.
(67)	9-26	Willcox	S-c	X-3657-W	48	Standing	R.C.Wiggins	Fireman	20	Lost balance and fell from engine tender while taking water.
(68)	9-29	Lusena	S-g	X-3658-W	49	Standing	C.A.Binkley	Brakeman	20	Fell from trestle while getting off train.
(69)	10-6	Benson	S-j	X-3753-W	64	8	J.H.Hamilton	Brakeman	11	Stepped on piece of ballast and turned ankle.
(70)	10-21	Pantano	S-c	412	63	Standing	R.V.Culley	Fireman	18	Slipped on top of engine tender.
(71)	11-30	Gila	S-j	X-2791-W	62	Standing	H.H.Hanemire	Brakeman	12	Struck by pole while unloading cattle from car.
(72)	12-7	Chemise	S-j	244	47	20 to 25	W.F.Groth	Brakeman	40	Fell from moving train due to hand hold pulling loose.
(73)	12-13	Safford	S-j	X-670-E	28	25	J.M.Dorsey	Brakeman	21	Slipped and fell on gondola car.
(74)	12-14	Dome	S-j	1-412	38	10	F.E.Coleman	Brakeman	15	Foot slipped off ladder on car.
(75)	12-16	Cortaro	S-c	2-412	60	20	R.J.Hudis	Fireman	22	Scalded by hot water escaping from squirt hose.
(76)	12-16	Tempe	S-g	54	65	Standing	F.B.Able	Brakeman	12	Stepped on stake driven into ground when getting off caboose.
	1925						YEAR 1925			

(54)	4-4	Marre	S-f	X-3728-W	64	10	R.E.Simmons	Brakeman	Permanent	Fell under train while bleeding brake cylinder on car.
(55)	4-20	Willcox	S-j	X-3233-W	39	Standing	C.H.Sellars	Conductor	15	Stepped on protruding nail.
(56)	4-23	Theba	S-d	X-2598-W	64	6	C.C.Easterling	Brakeman	10	Thrown against end of car and brake wheel while setting hand brake, when car he was riding struck another cut of cars.
(57)	5-15	Dragoon	S-c	2-412	64	Standing	J.G.Blaise	Fireman	30	Fell from trestle getting off engine.
(58)	5-25	Palve	S-j	X-3638-W	53	25	E.J.Durnil	Conductor	9	Undesired emergency caused a sudden stop and injury to conductor in caboose.
(59)	5-28	Laguna	S-g	1-412	65	8 to 12	B.W.Edwards	Conductor	20	Foot slipped on ballast getting on moving train.
(60)	6-18	Maricopa	S-j	X-2557-W	66	6	C.H.Pilcher	Brakeman	14	Run in of slack as train was stopping injured brakeman in caboose.
(61)	6-18	Estrella	S-j	1-244	67	4	J.M.Wonmer	Conductor	14	Thrown against end of caboose when caboose made rough coupling to train.
(62)	6-27	Mohawk	S-g	X-2326-W	66	1	R.L.Shields	Brakeman	Died	Fell from bridge to ground when getting off train.
(63)	7-18	Lava	S-j	2-426	47	7 to 8	H.H.McBeen	Brakeman	20	Caught foot between draw bar and deadwood.
(64)	7-20	Tucson	S-d	X-2725-W	67	Standing	V.B.Hendry	Brakeman	20	Fell from car while releasing hand brake.
(65)	7-23	Benson	S-j	244	59	10	G.M.Barringer	Brakeman	5	Flying particle of steel in eye.
(66)	9-10	Tuba	S-j	X-2942-W	60	4	J.H.Hamilton	Brakeman	8	Stepped in hole while bleeding brake cylinder on car.
(67)	9-26	Willcox	S-c	X-3657-W	48	Standing	R.C.Wiggins	Fireman	20	Lost balance and fell from engine tender while taking water.
(68)	9-29	Laguna	S-g	X-3658-W	49	Standing	C.A.Binkley	Brakeman	20	Fell from trestle while getting off train.
(69)	10-6	Benson	S-j	X-3753-W	64	8	J.H.Hamilton	Brakeman	11	Stepped on piece of ballast and turned ankle.
(70)	10-21	Pantano	S-c	412	63	Standing	R.V.Culley	Fireman	18	Slipped on top of engine tender.
(71)	11-30	Gila	S-j	X-2791-W	62	Standing	H.H.Hammire	Brakeman	12	Struck by pole while unloading cattle from car.
(72)	12-7	Chemise	S-j	244	47	20 to 25	W.F.Groth	Brakeman	40	Fell from moving train due to hand hold pulling loose.
(73)	12-13	Safford	S-j	X-670-E	28	25	J.M.Dorsey	Brakeman	21	Slipped and fell on gondola car.
(74)	12-14	Dome	S-j	1-412	38	10	F.E.Coleman	Brakeman	15	Foot slipped off ladder on car.
(75)	12-16	Cortaro	S-c	2-412	60	20	R.J.Hudis	Fireman	22	Scalded by hot water escaping from squirt hose.
(76)	12-16	Tempe	S-g	54	65	Standing	F.B.Able	Brakeman	12	Stepped on stake driven into ground when getting off caboose.
	1925					YEAR 1925				
(77)	1-1	Maricopa	S-j	X-2594-W	64	3	F.E.Martin	Brakeman	Permanent	Fell from moving car and run over when cars coupled to others.
(78)	1-2	Don Luis	S-d	X-288-W	70	2	W.A.Kidd	Brakeman	6	Struck by brake club when releasing hand brake.
(79)	1-3	Gila	S-j	X-2556-W	67	15	E.Perry	Brakeman	4	Thrown down on top of cars when hard coupling made.
(80)	1-20	Tucson	S-d	X-2559-W	70	Standing	P.H.Arnold	Brakeman	3	Fell from car while releasing hand brake.
(81)	1-30	Maricopa	S-c	X-2723-W	67	Standing	E.J.Roberts	Fireman	14	Slipped and fell from top of engine tender.
(82)	1-30	Sentinel	S-j	X-2812-W	61	3	R.B.Miller	Brakeman	4	Sprained ankle walking alongside train bleeding brake cylinder on car.
(83)	2-14	Dragoon	S-d	X-36 -W	3	4	H.M.Martin	Brakeman	4	Struck by brake handle releasing hand brake.
(84)	2-19	Bowie	S-j	X-2899-E	3	Standing	T.Crow	Brakeman	10	Fell between while stepping from one car to another.
(85)	2-27	Tucson	S-d	1-46	48	1	R.Bell	Brakeman	30	Sudden start of train while setting hand brake on car, threw brakeman down on car.
(86)	3-21	Bsell	S-g	X-3615-W	68	10	C.T.Palmer	Brakeman	30	Thrown to ground while trying to catch caboose.
(87)	3-21	Bowie	S-g	2-426	58	6 to 8	H.L.Hack H.Bsell	Brakeman Brakeman	5 10	Train entering siding, collided with standing cut of cars.
(88)	3-28	Asher	S-j	1-412	62	25	R.B.Miller	Brakeman	10	Slipped and fell from moving train.
(89)	4-2	Red Rock	S-c	2-92	57	Standing	R.Lyle	Engineer	30	Caught finger in air sander valve.
(90)	4-12	Alrich	S-j	1-412	64	30	R.R.Blanton	Brakeman	30	Undesired emergency caused sudden stop and threw brakeman against locker in caboose.
(91)	4-13	Coledon	S-j	X-2757-W	58	4	F.E.Pierce	Brakeman	4	Fell from culvert.

P = caused from sudden stopping, starting, lurch, or jerk of car or train.

(464)	10-12	Tacna	S-j	3-841	47	Standing	W.W.Pettie	Conductor	8	Finger caught between brake club and truck frame while wiring up brake beam.
(465)	10-16	Wellton	S-j	902	62	Standing	F.E.Gray	Brakeman	5	Foot struck by rebounding running board.
(466)	10-21	Yuma	MS-j	X-5025-E	12	12	O.C.Klaus W.H.Mausman	Conductor Brakeman	30 Permanent	Thrown in caboose on account of undesired emergency as train was being brought to a stop.
(467)	11-3	Fairbank	S-j	941	10	Standing	S.W.Shockley	Conductor	42	Lost balance and fell from top of a water car to ground.
(468)	11-8	Benson	S-g	1-866	69	15	F.W.Killmer	Conductor	30	Stumbled and fell on highway crossing detraining from caboose.
(469)	11-9	Globe	S-d	X-2757-E	10	Standing	C.L.Bishop	Brakeman	30	Struck by flying brake club while releasing hand brake.
(470)	11-10	Coolidge	S-j	X-1825-W	11	8	R.E.Kelly	Brakeman	30	Thrown to ground from caboose when it made hard coupling with standing cars.
(471)	11-30	Corta	S-j	X-3301-E	30	18	D.W.Richards	Brakeman	4	Foreign object in eye.
(472)	12-15	Benson	MS-j	X-5009-W	66	15	A.P.Leirce, T.E.Nolen	Brakeman Brakeman	14 19	Trainmen thrown in caboose by sudden stop caused by train parting due to defective draw bar.
(473)	12-24	Tucson	MS-j	X-5026-W	70	8	B.F.VanHorn	Conductor	40	Thrown from side of car when train backing up broke in two
1938							YEAR 1937			

(457)	7-5	Jaynes	S-j	X-5022-W	65	35	V.R.Murray	Brakeman	4	Thrown against inside frame of cupola by undesired emergency.
(458)	7-5	Red Rock	S-j	903	50	40	M.S.Thompson	Brakeman	Killed	Fell from top of moving train.
(459)	7-21	Gila	S-g	856	53	8	C.A.Boyd, Jr.	Brakeman	14	Stepped on rock and sprained ankle detraining from caboose.
(460)	7-21	Aztec	S-g	X-2837-W	67	10	G.R.Tinsley	Brakeman	14	Slipped on small rock and fell spraining arm and shoulder when boarding caboose.
(461)	8-22	Dixie	S-j	901	67	12	C.L.Cain	Conductor	9	Fell from car to ground when brake wheel unexpectedly released due to defect.
(462)	9-5	Mohawk	S-j	X-3322-W	65	35	C.H.Sellars	Fireman	4	Hot sand in eye.
(463)	10-12	Litchfield	S-j	X-1833-W	5	1	H.W.Holley	Brakeman	30	Stepped off end of car and fell to ground.
(464)	10-12	Tacna	S-j	3-841	47	Standing	T.W.Pettis	Conductor	6	Finger caught between brake club and truck frame while wiring up brake beam.
(465)	10-16	Wellton	S-j	902	62	Standing	F.D.Grey	Brakeman	5	Foot struck by rebounding running board.
(466)	10-21	Yuma	S-j	X-5025-E	12	12	O.C.Klaus W.H.Hauseman	Conductor Brakeman	30 Permanent	Thrown in caboose on account of undesired emergency as train was being brought to a stop.
(467)	11-3	Fairbank	S-j	941	10	Standing	S.W.Shockley	Conductor	42	Lost balance and fell from top of a water car to ground.
(468)	11-8	Benson	S-g	1-866	69	15	F.W.Killmer	Conductor	30	Stumbled and fell on highway crossing detraining from caboose.
(469)	11-9	Globe	S-d	X-2757-E	10	Standing	C.L.Bishop	Brakeman	30	Struck by flying brake club while releasing hand brake.
(470)	11-10	Coolidge	S-j	X-1825-W	11	8	R.E.Kelly	Brakeman	30	Thrown to ground from caboose when it made hard coupling with standing cars.
(471)	11-30	Corts	S-j	X-3301-E	30	18	D.M.Richards	Brakeman	4	Foreign object in eye.
(472)	12-15	Benson	S-j	X-5009-W	66	15	A.P.Peirce, T.E.Nolen	Brakeman Brakeman	14 19	Trainmen thrown in caboose by sudden stop caused by train parting due to defective draw bar.
(473)	12-24	Tucson	S-j	X-5026-W	70	8	B.F.VanHorn	Conductor	40	Thrown from side of car when train backing up broke-in-two
1938				YEAR 1938						
(474)	1-15	Nogales	S-d	871	45	Standing	A.H.Weathers	Brakeman	30	Wrenched arm when hand brake released unexpectedly.
(475)	1-28	Clifton	S-g	952	5	4	J.F.Hickman	Conductor	10	Thrown to ground account failure to get clear when detraining from car.
(476)	2-20	Piedra	S-j	X-3113-W	66	Standing	V.J.Krupp	Brakeman	30	Caught finger between chain hook and drain of arch bar truck.
(477)	2-23	Somerton	S-g	X-1624-W	11	8	W.J.Bernard	Brakeman	30	Slipped on gravel and fell detraining from caboose.
(478)	2-24	Picacho	S-j	X-3618-W	65	35	W.C.Ritchie	Brakeman	Killed	Fell from gangway of engine.
(479)	3-29	Yuma	S-i	X-1721-W	48	Standing	W.A.Franks	Conductor	Died	Struck and run over by car handled by yard engine.
(480)	4-3	Harqua	S-j	902	45	4	R.E.McCullar	Brakeman	14	Slipped on piece of slag rounding the shop switch.
(481)	6-13	Tucson	C-h	X-3613-W	65	3	C.A.Bruce	Conductor	7	Two cars uncontrolled in switching movement collided with rear of train as it was leaving yard.
(482)	6-17	Wescal	S-j	3-866	68	3	L.F.Brown	Brakeman	3	Thrown against end ladder of caboose by slack action during back-up movement of train.
(483)	6-22	Gila	S-j	X-3636-W	70	8	G.O.Brockmiller	Conductor	8	Flying particle entered eye.
(484)	7-2	Yuma	S-j	2-842	70	Standing	C.Bryan	Conductor	8	Stepped on some object on ground and turned an ankle.
(485)	7-3	Douglas	S-g	X-5000-W	50	10	P.J.Savage	Brakeman	45	Stumbled and fell detraining from car.
(486)	7-11	Forrest	S-j	962	67	Standing	A.A.Crenshaw	Brakeman	4	Fell from caboose platform to ground while adjusting marker.
(487)	7-30	Tucson	S-d	962	24	Standing	W.F.Kelley	Brakeman	Died	Fell from car to ground when struck by brake club as hand brake released unexpectedly.
(488)	8-5	Mohawk	D-e	X-3612-W	66	35	A.V.Beaman	Conductor	6	Thrown in caboose by sudden stop due to derail set of empty car next ahead of caboose.
(489)	8-19	Casa Grande	S-e	1-852	67	Standing	E. Nail	Brakeman	5	Sprained shoulder when switch rod struck in face.
(490)	10-3	Dragoon	S-e	Frt. Helper	None at time	Standing	G.J.Dorsey	Fireman	14	Strained elbow throwing switch.
(491)	10-9	Willcox	S-j	4-845	47	Standing	J.F.Hendrix	Conductor	30	Slipped and fell on slag ballast while walking alongside train.
(492)	10-27	Yuma	S-e	2-842	68	Standing	E.F.Taylor	Fireman	0	Fell from front end of locomotive while putting up injunctions
(493)	12-18	Bowie	S-d	X-5006-W	64	4	H.Showers	Brakeman	21	Trainman's foot struck when hand brake released unexpectedly.

= caused from sudden stopping, starting, lurch or jerk of car or train

1939										
(494)	2-2	Tucson	S-c	Detached engine	None	Standing	H. M. Flais	Fireman	30	Twisted wrist when wrench slipped replacing plug in blow-off cock.
(495)	2-19	Maricopa	S-c	1-856	62	Standing	H. S. Hall	Fireman	30	Fell off engine tender to ground while taking water.
(496)	3-4	Castilla	S-j	X-3634-W	66	40	T. P. King	Brakeman	30	Fell from gangway of engine to ground.
(497)	3-17	Ochoa	S-j	1-864	61	20	W.H.McDowell	Brakeman	6	Slipped and fell stepping from low to high car while walking over train.
(498)	3-28	Ft. Huachuca	S-d	942	10	Standing	C. R. Evans	Brakeman	14	Lost balance while setting hand brake and fell against ties loaded on flat car.
(499)	3-30	Theba	S-a	X-3643-W	64	1	C.L.Mathews	Brakeman	21	Claims pin dropped and caught hand when adjusting knuckle on car.
(500)	4-4	Maco	S-d	X-3611-W	70	Standing	H. E. Birch	Brakeman	60	Fell from top of car to ground while preparing to set hand brake.
(501)	5-9	Tovrea	S-g	X-17524E	7	Standing	R. E. Kelly	Brakeman	7	Sprained ankle when stepped on loose rock alighting from caboose.
(502)	6-2	Montrose	S-g	X-3743-W	65	8	O.N.Smyth	Brakeman	21	Sprained right knee when stepped in hole attempting to board engine.
(503)	6-2	Mescal-Benson	β S-j	2-864	69	Unknown	F.B.Austin	Bus.Car Chef	20	Claimed that jerk of train threw him against range oven door.
(504)	6-28	Wellton	S-j	902	53	1	L.W.Milligan	Brakeman	Killed	Fell between moving cars and run over during switching move.
(505)	7-22	Sentinel	S-g	3-842	70	1	A. J. Brown	Brakeman	10	Turned ankle on slag ballast when boarding car in train.
(506)	7-23	Bowie	β S-j	X-5003-W	70	1	O. C. Boone	Brakeman	180	Claims that as train started slack action or jerk of train caused him to fall from car to ground.
(507)	7-30	Arlington	β S-j	902	59	Unknown	R. A. Green	Brakeman	30	Either thrown or fell down in caboose.
(508)	7-31	Don Luis	S-g	X-3406-E	20	10	Jack Gray	Brakeman	15	While attempting to board engine, slipped on wet ground and fell against engine.
(509)	8-11	Mohawk	β S-j	X-3617-W	70	4	I. C. Allen	Conductor	45	Thrown in caboose when engineer made quick stop to avoid running through switch.
(510)	10-16	Fortuna	S-j	X-3617-E	38	Standing	A. Palacio	Sec.laborer	14	Caught finger in dump car door.
(511)	10-17	Maco	β S-j	962	51	8	F. A. Lassen	Brakeman	10	Thrown against car when adjustment of slack occurred backing 20 cars to coupling with train standing on main track.
(512)	10-27	Gila	S-c	1-854	68	20	F. G. Welch	Fireman	14	Fell against front of engine tender while sanding flues.
(513)	11-7	Ft. Huachuca	S-d	943	4	Standing	I. L. Bell	Conductor	180	Fell from top of car to ground apparently while operating hand brake.

1936							YEAR 1936			
(240)	5-26	Red House	ft-j	578	95	30	C.A.Cornwall	Brakeman	9	Fell from cupola to floor of caboose when emergency application of brakes occurred due to airpipe on engine breaking.
(241)	7-8	Elburz	S-j	E-1753-W	12	Standing	H.Cotton	Brakeman	15	Knee injured when piece of freight (metal roofing) slipped.
(242)	7-10	Cosgrave	ft-j	E-3718-W	122	40	R.Sexton W. Leitch	Brakeman Brakeman	57 25	Injured while riding in cupola due to breakage of brake pipe on engine.
(243)	8-6	Granite Point	ft-c	3-562	91	40	E.G.Baker	Brakeman	11	Sudden stop due to derailment caused by burst off journal 31st car from engine
(244)	9-28	Moor	S-g	E-3228-W	12	6	C.D.Carlin	Brakeman	10	Jumped from car in anticipation of derailment.
(245)	10-4	Reno	ft-b	E-4148-W	85	10	R.H.Wells	Conductor	10	Engineer applied brakes in emergency to avoid striking woman on street cross'g
(246)	12-4	Carlin	ft-j	E-3735-W	90	8	J.E.Hansen	Brakeman	7	Sudden stop due to break-in-two account coupler shank breaking.
1937							YEAR 1937			
(247)	1-10	Imlay	ft-j	E-3695-W	76	10	John Corrans	Brakeman	21	Fell against cupola steps when jerk occurred as train was stopping.
(248)	1-17	Montello	S-g	E-3225-E	75	6	J.W.Bonham	Brakeman	30	Slipped on side ladder of car and fell to ground.
(249)	3-24	Mason	S-b	E-3205-W	52	Standing	F.W.Schilling	Brakeman	20	Finger broken when hand came in contact with coupler while separating air hose.
(250)	4-8	Mason	S-g	E-3748-W	57	6	C.B.Huyck	Conductor	Killed	Fell from gangway of moving engine while detached from train and struck by truck structure of tender.
(251)	4-10	Death	S-g	E-1785-E	30	10	R.E.Breitweiser	Brakeman	9	Sprained ankle alighting from train.
(252)	5-26	Hima	S-d	605	6	Standing	S.C.McElwee	Brakeman	25	Hand caught between brake lever and step on end of car.
(253)	6-22	Montello	ft-j	E-3698-E	85	5	L.T.Dixon	Brakeman	8	Lost balance and fell against load machinery 21st car from engine when slight jerk of train occurred stopping.
(254)	8-1	Wells	S-d	3-570	91	Standing	J.E.White	Brakeman	30	Fell from car when foot slipped while preparing to set hand brake.
(255)	8-5	Upeal	ft-j	E-4365-W	93	20	H.I.Grieve	Brakeman	Permanent	Sudden stop due to undesired emergency.
(256)	9-15	Flanigan	S-j	552	66	1	R.C.Rheem	Brakeman	30	Fell to ground when hand slipped off hand rail while getting on running board of engine.
(257)	10-4	Imlay	S-g	E-3696-E	70	8	R.D.Quarry	Brakeman	30	Fell to ground detraining from gangway ladder of locomotive.
(258)	11-16	Anthony	S-j	3-578	100	35	R.C.Erskine	Brakeman	30	Lost hold on side ladder of car and fell to ground.
(259)	12-7	Imlay	S-j	E-4363-W	1 at time	3	W.A.Pool	Brakeman	20	Lost balance on caboose and fell to ground when reaching down to raise lock block of coupler.
(260)	12-15	Wells	ft-j	E-3679-W	86	2	W.B.Doerden	Brakeman	137	Lost hold and fell to ground from caboose step when jerk of train occurred while stopping.
1938							YEAR 1938			
(261)	5-5	Montello	S-c	E-4010-W	Loco at time	Standing	W.A.Roberts	Fireman	10	Struck leg on step to cond dome.
(262)	6-10	Palisade	S-j	570	80.	9	D.L.Lee	L.S.Laborer	30	Jumped from motor car trailer when struck by train.
(263)	7-17	Montello	S-d	3-578	99	Standing	A.J.Thumb	Brakeman	20	Lost balance and fell to ground while releasing hand brake.
(264)	10-10	Montello	S-d	3-574	111	Standing	L.E.Evans	Brakeman	10	Strained body and torn scar tissue from an operation releasing hand brake.
(265)	11-18	Sparks	ft-j	E-4154-E	101	3	C.H.Brown	Conductor	26	Lost balance and fell to floor when slack ran in as train was stopping.

(247)	1-10	Imlay	fb-j	E-3695-E	76	10	John Gerrans	Brakeman	21	Fell against cupola steps when jerk occurred as train was stopping.
(248)	1-17	Montello	S-g	E-3225-E	75	6	J.W.Benham	Brakeman	30	Slipped on side ladder of car and fell to ground.
(249)	2-24	Eaton	S-b	E-3205-E	52	Standing	F.W.Schilling	Brakeman	20	Finger broken when hand came in contact with coupler while separating air hose.
(250)	4-8	Eaton	S-g	E-3748-E	57	6	C.B.Huyck	Conductor	Killed	Fell from gangway of moving engine while detached from train and struck by truck structure of tender.
(251)	4-10	Booth	S-g	E-1785-E	30	10	R.E.Breitenbach	Brakeman	9	Sprained ankle alighting from train.
(252)	5-26	Elko	S-d	605	6	Standing	S.C.McElvee	Brakeman	25	Hand caught between brake lever and step on end of car.
(253)	6-22	Montello	fb-j	E-3698-E	85	5	L.T.Dixon	Brakeman	8	Lost balance and fell against load machinery 21st car from engine when slight jerk of train occurred stopping.
(254)	8-1	Wells	S-d	2-570	91	Standing	J.K.White	Brakeman	30	Fell from car when foot slipped while preparing to set hand brake.
(255)	8-5	Opal	fb-j	E-4365-E	93	20	H.I.Grieve	Brakeman	Permanent	Sudden stop due to undesired emergency.
(256)	9-15	Flanigan	S-j	552	66	1	R.C.Mason	Brakeman	30	Fell to ground when hand slipped off hand rail while getting on running board of engine.
(257)	10-6	Imlay	S-g	E-3696-E	70	8	R.D.Query	Brakeman	30	Fell to ground detraining from gangway ladder of locomotive.
(258)	11-16	Anthony	S-j	3-578	100	35	R.C.Erskine	Brakeman	30	Lost hold on side ladder of car and fell to ground.
(259)	12-7	Imlay	S-j	E-4363-E	1 at time	3	W.A.Peel	Brakeman	20	Lost balance on caboose and fell to ground when reaching down to raise lock block of coupler.
(260)	12-15	Wells	fb-j	E-3679-E	86	2	W.B.Duerden	Brakeman	137	Lost hold and fell to ground from caboose step when jerk of train occurred while stopping.
1938							YEAR 1938			
(261)	5-5	Montello	S-c	E-4010-E	Made at time	Standing	W.A.Roberts	Fireman	10	Struck leg on step to send down.
(262)	6-10	Palisade	S-j	570	80	9	D.L.Lee	L.S.Laborer	30	Jumped from motor car trailer when struck by train.
(263)	7-17	Montello	S-d	2-578	99	Standing	A.A.Thomas	Brakeman	20	Lost balance and fell to ground while releasing hand brake.
(264)	10-10	Montello	S-d	2-574	111	Standing	L.E.Evans	Brakeman	10	Strained body and torn scar tissue from an operation releasing hand brake.
(265)	11-18	Sparks	fb-j	E-4156-E	101	3	C.H.Brown	Conductor	26	Lost balance and fell to floor when slack ran in as train was stopping.
(266)	11-19	Ruse	fb-b	E-4165-E	85	12	C.E.Goeble J.E.Page D.B.Woolverton J.G.Hooker J.C.Pedersen	Conductor Brakeman Brakeman Brakeman Brakeman	286 109 81 58 51	Run in of slack resulting from heavy service application to avoid striking an automobile standing foul of track.
(267)	12-28	Wells	S-j	E-3730-E	3	5	O.C.Johnson	Brakeman	10	Lost balance and fell against car when one car coupled to 2 others during switching movement.
							YEAR 1939			
(268)	2-13	Lovelock	fb-j	560	104	20	W.B.Conway	Brakeman	21	While train being brought to a stop, lost balance and fell against stove.
(269)	3-10	Battle Mountain	S-g	E-3713-E	102	10	J.C.Walker	Conductor	14	Foot slipped off step while getting on caboose.
(270)	7-15	Elko	S-j	1-560	108	5	D.J.Jones	Brakeman	10	Stepped on rock and wrenched knee while running after lining switch.
(271)	8-17	Carlin	S-g	1-576	100	6	H.G.Thurston	Brakeman	21	Stumbled and fell attempting to board car in train.
(272)	8-28	Valley Pass	S-c	E-4034-E	70	5	Harry DeYoung	Brakeman	Killed	Lost balance, fell from caboose steps and run over when helper engine struck caboose.
(273)	10-11	Ruse	fb-j	E-4184-E	69	5	W.H.Richart	Conductor	20	Lost balance and fell against desk as speed of train reduced.
(274)	11- 9	Sutcliffe	S-c	1-559	86	Standing	A.B.Roney	Fireman	30	Lost balance and fell back against railing on tender while taking water, due to ring coming off water spout.
(275)	12-10	Lovelock	fb-j	482	79	30	J.L.Clark	Conductor	4	Thrown against locker and stove while walking from rear platform of caboose when slack ran in.

fb - Caused from sudden stopping, starting, lurch or jerk of car or train.

Defendant's Exhibit No. 278 (Witness J.J. Sullivan)
(Feb. 6, 1941

SOUTHERN PACIFIC COMPANY
(Pacific Lines)

CASUALTIES TO ALL CLASSES OF EMPLOYES ON DUTY
ROAD FREIGHT TRAIN OPERATION,
SUSTAINED IN TRAIN AND TRAIN SERVICE ACCIDENTS
REPORTABLE TO THE INTERSTATE COMMERCE COMMISSION
CLASSIFIED AS TO CAUSES AND CLASSES OF EMPLOYES
FOR THE YEARS 1923 TO 1939 INCLUSIVE

SOUTHERN PACIFIC COMPANY
STATES OF NEVADA AND ARIZONA

This exhibit, showing the number of casualties by classes of employes and causes of accident, is supplementary to and explanatory of Exhibit No. 277 which shows the total number of casualties only.

Defendant's Exhibit No. 289 (Witness J.J. Sullivan)
Feb. 6, 1941

SOUTHERN PACIFIC COMPANY
(Pacific Lines)

DETAIL OF TRAIN ACCIDENTS,
ROAD FREIGHT TRAIN OPERATION
REPORTED TO THE INTERSTATE COMMERCE COMMISSION
YEARS 1923 TO 1939, INCLUSIVE

STATE OF ARIZONA

	DATE (a)	LOCATION (b)	I.C.C. CLASS (c)	TRAIN NUMBER (d)	NO. CARS IN TRAIN (e)	SPEED M.P.H. (f)	PERSON INJURED NAME (g)	PERSON INJURED OCCUPATION (h)	ESTIMATED DISABILITY (DAYS) (i)	TOTAL DAMAGE (j)	DESCRIPTION OF ACCIDENT (k)
	1923						YEAR 1923				
(1)	1-12	Ivalon	C-h	E-2594-W	67	12	None	-	-	$ 490	Cars being shoved to passing track collided with other cars due to brakeman lining wrong switch.
(2)	1-20	Stockham	D-i	E-3639-W	58	8	H. A. Miller	Fireman	25	3,445	Engine derailed and partly turned over and two following cars derailed and turned over after engine truck climbed guard rail while moving through turnout.
(3)	1-30	Sibyl	D-d	E-3667-W	50	4-5	None	-	-	405	Derailment caused by bridle rod breaking on switch point derail.
(4)	2-20	Lirim	D-e	E-2758-W	67	30	None	-	-	470	Derailment caused by broken flange in cast iron wheel.
(5)	4-18	Eloy	M-b	E-2774-W	68	8	None	-	-	2,000	Trespassers smoking in car started fire which destroyed super-structure of car.
(6)	6-10	Covot	D-a	E-3665-W	66	15	None	-	-	2,610	Derailment caused by undesired emergency application of air brakes due to defective triple.
(7)	6-13	Wellton	D-g	2-426	46	10	None	-	-	750	Train backed into motor car near spur switch, motor car jambing under caboose trucks.
(8)	7-10	Patio	C-b	E-2583-W	47	3	P. Rosales	Car repairer	20	965	Engineer misjudged braking power of his train; failed to start making stop in time to avoid overrunning signal, train colliding with standing engine.
(9)	8-24	Maricopa	D-a	E-2789-W	65	8	None	-	-	210	Derailment caused by air brakes applying in emergency due to dirty triple.
(10)	9-4	Sibyl	M-b	E-3654-W 110	66 12	2 40	C. E. Yeats	Express messenger	21	858	Airhose burst on car, slack running in and breaking car in center, car bulging out toward main track and raking cars in passing passenger train, causing injury to express messenger in baggage car.
(11)	10-21	Tucson-Stockham	M-b	1-244	51	10	None	-	-	350	Car and contents caught on fire, probably due to lighted substance thrown by passenger from train 107 which was passed at Jaynes.
(12)	11-29	Pantano	D-e	E-3656-W	42	15	None	-	-	300	Derailment caused by broken flange in cast iron wheel.
(13)	12-11	Bowie	D-i	E-3639-W	17	3	None	-	-	945	Weak wooden frame car buckled while cars were being shoved in ordinary switching movement.
(14)	12-16	Bowtry	D-e	E-3658-W	65	25-30	None	-	-	215	Derailment caused by broken cast iron wheel.
	1924						YEAR 1924				
(15)	1-23	Karro	D-e.	E-3639-E	67	30	None	-	-	2,835	Derailment caused by broken cast iron wheel.
(16)	1-24	Cahe--									

[illegible]

[illegible]

	(a)	(b)	(c)	(d)	(e)	(f)	(g)	(h)	(i)	(j)	(k)
	1934							YEAR 1934 (Continued)			
(28)	6-11	Kerrodale	G-5	2-[illegible]-0	45	8	Some	-	-	$ 485	Collision caused by car not sufficiently secured by hand brakes rolling down grade.
(29)	6-17	Tyndall	G-1	1-254	46	12	Some	-	-	200	Grain parted due to some unauthorized person stepping on cutting lever.
(30)	6-27	Kerrodale	G-5	2-[illegible]-0	50	4	None	-	-	200	Fire started by trespassers smoking in car.
(31)	6-30	Elgin	G-1	2-[illegible]-0	39	12	Some	-	-	300	Derailment caused by wheel breaking due to brakes sticking on on account defective triple.
(32)	7-11	Hankow	G-1	1-[illegible]	35	10	Some	-	-	222	Derailment caused by arch bar dropping down due to box bolts shearing off.
(33)	7-13	Ellis	G-5	412	35	8	Some	-	-	225	Collision caused by brakeman lining wrong switch for engine and cars which were backing.
(34)	7-16	Guilford	Dog	254	38	3-6	Some	-	-	185	Caboose struck water car and derailed due to brakeman giving back up signal before he lined switch and then not getting switch line
(35)	7-20	Estrella	G-5	91	46	12	Some	-	-	405	Hard coupling made by two cars which were dropped, allegedly due to hand brake not holding.
(36)	11-21	Kennerlin	G-1	42[illegible]	31	20	Some	-	-	300	Derailment caused by cast iron wheel breaking.
(37)	10-10	Kenton	G-5	412	3	11	Some	-	-	1,007	Two cars cut off train struck other cars, allegedly because hand brake would not hold.
(38)	10-12	Hayden Junction	G-1	2-[illegible]-0	15	20	Some	-	-	315	Lead truck of tender derailed due to axle breaking.
(39)	10-18	Charleston	G-5	2-[illegible]-0	35	25	Some	-	-	200	Train struck motor car on track due to insufficient flag protection being provided.
(40)	10-27	Douglas	G-5	(2-[illegible]-0 (2-[illegible]-0	Some Some	Standing 4	Some	-	-	296	Engine 288 backed into engine 292.
(41)	10-31	Tenor	G-1	2-[illegible]-0	47	15	Some	-	-	250	Derailment caused by cast iron wheel breaking.
	1935							YEAR 1935			
(42)	1-24	Kline	L-5	141	40	15	Some	-	-	265	Left main rod broke on helper engine.
(43)	1-23	Phoenix	G-1	129	19	15	Some	-	-	270	Derailment caused by broken arch bar.
(44)	1-27	Collier	L-1	2-[illegible]-0	22	12	Some	-	-	590	Driver axle of engine broke.
(45)	2-5	Shannon	G-5	2-[illegible]-0	40	20	Some	-	-	300	Undesired emergency application air brakes caused break-in-two and pulled end sill and drawbar out of weak car.
(46)	2-6	Buell	G-1	418	43	20	Some	-	-	175	Car derailed when box bolt broke, permitting wheels to come out from under car.
(47)	2-21	Felix	G-1	2-[illegible]-0	45	20-25	Some	-	-	979	Broken arch bar on car caused derailment.
(48)	2-21	Irene	G-1	2-[illegible]-0	53	10	Some	-	-	190	Car derailed due to forward truck mounting rail.
(49)	2-23	Tucson	G-5	2-[illegible]-0	35	6	Some	-	-	850	Train backed into cars when it backed in on wrong track.
(50)	3-[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

(34)	11-10	Sahuarita	D-e	481	31	20	None					405	Hard coupling made by two cars which were dropped allegedly du. to hand brake not holding.
(35)	12-10	Bowie	C-h	412	3	15	None					500	Derailme caused by cast iron wheel breaking.
(36)	12-12	Hayden Junction	D-e	X-903-E	35	20	None					1,007	Two cars of off train struck other cars, allegedly because han brake would not hold.
(37)	12-18	Charleston	M-b	X-282-W	36	25	None					315	Lead truck of tender derailed due to axle breaking.
(38)	12-25	Douglas	C-d	(X-288-E (X-292-E	None None	Standing 4	None					200 296	Train struck motor car on track due to insufficient flag protection being provided. Engine 288 backed into engine 292.
(39)	12-31	Vamar	D-e	X-3654-W	67	15	None					250	Derailment caused by cast iron wheel breaking.
	1925												YEAR 1925
(40)	1-14	Rice	L-b	141	40	15	None					265	Left main rod broke on helper engine.
(41)	1-23	Phoenix	D-e	129	19	15	None					270	Derailment caused by broken arch bar.
(42)	1-27	Cutter	L-e	X-669-E	22	12	None					590	Driver axle of engine broke.
(43)	2-5	Rhemont	M-b	X-3635-W	60	20	None					300	Undesired emergency application air brakes caused break-in-two and pulled end sill and drawbar out of weak car.
(44)	2-6	Buell	D-e	418	43	20	None					175	Car derailed when box bolt broke, permitting wheels to come out from under car.
(45)	2-15	Pelvo	D-e	X-3730-W	43	20-25	None					979	Broken arch bar on car caused derailment.
(46)	2-20	Irene	D-j	X-3728-W	53	10	None					190	Car derailed due to forward truck mounting rail.
(47)	2-22	Tucson	C-g	X-2723-W	15	6	None					850	Train backed into cars when it backed in on wrong track.
(48)	2-26	Bolton	D-j	X-2594-W	68	35	None					315	Derailment caused by wheel breaking due to overheating account defective triple.
(49)	3-17	Cutter	L-b	X-671-W	58	3	None					300	Strap bolts, back end main rod of engine broke.
(50)	3-21	Davis	C-g	2-426	56	6-8	H.L.Hunt H.Rozell	Brakeman Brakeman			5 10	2,300	Train entering siding collided with standing cut of cars.
(51)	3-28	Rankin	D-e	X-3682-W	64	20-25	None					960	Derailment caused by drawbar pulling out of car due to coupler draft coming out.
(52)	3-31	Tucson	D-e	X-369-W	49	15	None					770	Derailment caused by plow on ballast car dropping down account iron strap breaking.
(53)	4-5	Lee	D-d	X-3423-E	30	35	None					3,933	Broken 80 lb. rail derailed ten cars.
(54)	4-10	Patio Yard	C-h	(X-2771-E (Yd. Eng.	1 21	8 4	None					680	Engine of extra east which was dropping caboose, collided with yard engine.
(55)	4-13	Benson	D-e	412	67	15	None					12,445	Derailment caused by cast iron wheel of car breaking.
(56)	4-17	Burns	M-b	X-3277-E	54	15	None					500	Bridge caught on fire, probably due to burning waste falling from hot box on train.
(57)	4-21	Pisacho	M-b	2-412	65	25	None					650	Train struck motor cars which were not properly protected by flag.
(58)	4-21	Karro	D-e	X-3702-E	68	30	None					1,861	Car derailed due to loose wheel under rear truck.
(59)	5-18	Lusana	D-e	418	25	5	None					165	Derailment caused by lead wheel of forward truck of car climbing rail, due to bound trucks on the car.

	DATE (a)	LOCATION (b)	I.C.C. CLASS (c)	TRAIN NUMBER (d)	NO. CARS IN TRAIN (e)	SPEED M.P.H. (f)	PERSON INJURED NAME (g)	PERSON INJURED OCCUPATION (h)	ESTIMATED DISABILITY (DAYS) (i)	TOTAL DAMAGE (j)	DESCRIPTION OF ACCIDENT (k)
	1925						YEAR 1925 (Continued)				
(60)	5-23	Willcox	D-e	426	64	25	None	-	-	$10,728	Derailment caused by broken wheel on car.
(61)	5-26	Coleton	D-e	X-2752-W	66	30	None	-	-	698	Journal box bolt sheared off, letting arch bar down, causing derailment.
(62)	6-1	Vail	C-h	418	8	12	None	-	-	469	Cut of cars which brakeman failed to ride collided with car on spur.
(63)	6-13	Mobile	D-e	3-92	66	8	None	-	-	825	Box bolts sheared off, letting arch bar drop, causing derailment.
(64)	6-20	Granite Spur	C-h	X-2797-W	68	15	None	-	-	500	Two cars dropped at excessive speed collided with other cars.
(65)	7-8	Douglas	L-e	94	25	6	None	-	-	600	Main axle of engine broke due to old defect.
(66)	7-14	Kingdon	D-i	X-669-W	37	12	None	-	-	731	Badly bowed car with high unbalanced load derailed on curve.
(67)	7-14	Tacna	D-e	2-92	66	22	None	-	-	585	Journal broke off, due to overheating at some previous time, causing derailment.
(68)	7-19	San Simon	D-e	1-412	70	30	None	-	-	516	Derailment caused by box bolts shearing off forward truck of car.
(69)	7-23	Piedra	D-e	426	54	32	W. J. Woodmansee	Engineer	10	13,240	Eleven cars derailed due to loosened box bolt on 31st car from engine shearing off, allowing arch bar to buckle and truck to drop down, derailed car striking engine of work train on siding, causing injury to engineer.
(70)	8-10	Gila	C-h	X-3662-W	8	12	None	-	-	450	Two cars ahead of engine being dropped; brakeman failed to throw switch for main track, letting engine and two cabooses ahead of engine collide with cars.
(71)	8-17	Burns	D-e	128	28	25	None	-	-	877	Derailment caused by defective flange in wheel of car breaking.
(72)	8-25	Steval	D-e	X-4301-W	67	35	None	-	-	566	Derailment caused by truckside breaking at old weld.
(73)	9-13	Tucson	M-b	X-2812-W	67	25	None	-	-	245	Train broke-in-two due to severe slack action caused by improper application of air by engineer.
(74)	9-16	Maricopa	D-a	X-2798-W	67	3	None	-	-	290	Derailment caused by undesired emergency application of air brakes while stopping due to dirty, slow-acting triple.
(75)	9-16	Ligurta	M-b	2-412	68	30	None	-	-	270	Projecting timber on car struck signal.
(76)	9-20	Maricopa	C-h	X-2583-W	24	8	None	-	-	175	Engine backing up struck empty box car due to failure of brakeman to ride rear of engine.
(77)	10-18	San Pedro	M-b	X-3304-W	65	6	None	-	-	200	Air brakes went into undesired emergency causing car to buckle.
(78)	11-16	Bisbee	M-b	67	2	Standing	None	-	-	500	Ceiling lamp in coach exploded, setting fire to coach.
(79)	12-19	Tempe	C-h	129	7	1-2	None	-	-	265	Cars being backed in on track collided with standing outfit cars.
(80)	12-21	Cohoa	D-e	X-3658-W	58	25	None	-	-	10,850	Derailment caused by broken flange on car.
	1926						YEAR 1926				
(81)	1-10	Rose	M-b	426	70	25	None	-	-	880	Wheel broke on car due to overheating.
(82)	1-30	Tucson	D-g	X-3692-W	69	10	None	-	-	219	Derailment caused by running through switch which was damaged and cocked due to having previously been run through.

												drop down, derailed car striking engine of work train on siding, causing injury to engineer.
(70)	8-10	Gila	C-h	X-3662-W	5	12	None	-	-	450	Two cars ahead of engine being dropped; brakeman failed to throw switch for main track, letting engine and two cabooses ahead of engine collide with cars.
(71)	8-17	Burns	B-e	128	28	25	None	-	-	877	Derailment caused by defective flange in wheel of car breaking.
(72)	8-25	Stoval	B-e	X-4301-W	67	35	None	-	-	566	Derailment caused by truckside breaking at old weld.
(73)	9-13	Tucson	M-b	X-2812-W	67	25	None	-	-	245	Train broke-in-two due to severe slack action caused by improper application of air by engineer.
(74)	9-16	Maricopa	B-a	X-2798-W	67	3	None	-	-	290	Derailment caused by undesired emergency application of air brakes while stopping due to dirty, slow-acting triple.
(75)	9-16	Ligurta	M-b	2-412	68	30	None	-	-	270	Projecting timber on car struck signal.
(76)	9-20	Maricopa	C-h	X-2583-W	24	8	None	-	-	175	Engine backing up struck empty box car due to failure of brakeman to ride rear of engine.
(77)	10-18	San Pedro	M-b	X-3304-W	65	6	None	-	-	200	Air brakes went into undesired emergency causing car to buckle.
(78)	11-16	Bisbee	M-b	67	2	Standing	None	-	-	500	Ceiling lamp in coach exploded, setting fire to coach.
(79)	12-19	Tempe	C-h	129	7	1-2	None	-	-	265	Cars being backed in on track collided with standing outfit cars.
(80)	12-21	Ochoa	B-e	X-3658-W	58	25	None	-	-	10,850	Derailment caused by broken flange on car.
	1926					YEAR 1926					
(81)	1-10	Rase	M-b	426	70	25	None	-	-	880	Wheel broke on car due to overheating.
(82)	1-30	Tucson	B-g	X-3692-W	69	10	None	-	-	219	Derailment caused by running through switch which was damaged and cocked due to having previously been run through.
(83)	2-4	Brannman	B-e	X-3276-W	33	22	None	-	-	497	Flange of wheel on car broke due to concealed defect in construction.

(200)	8-28	Tucson	D-e	X-3316-W	66	10	None			242	Derailed 41st and 42nd cars due to brake beam dropping down breaking account brake hanger key bolt missing.
(201)	9-12	Douglas	D-i	169	18	25	None			1,095	Derailed 12th and 13th cars due to heavy overload of ore and uneven superelevation of track.
(202)	9-21	Chavez	L-b	482	35	15	None			800	Main rod strap on engine broke.
											YEAR 1932
(203)	1-19	Thebe	L-e	X-2546-W	65	3	None			175	Main axle on engine broke due to progressive fracture.
(204)	2-2	Pembroke-Colfred	M-b	X-3324-W	69	38	None			255	One car derailed due to arch bar breaking.
(205)	-25	Amole	L-b	1-410	70	30	None			250	Middle main rod strap broke on locomotive.
(206)	3-3	Dragoon	L-b	414	70	10	None			280	Side rod of engine failed due to flaw.
(207)	3-4	Tucson	L-b	2-412	70	5	None			220	Middle main rod of engine broke due to flaw.
(208)	3-11	Gran Grande	L-e	1-416	70	1	None			250	Main axle of engine broke due to flaw.

(193)	7-1	Kirk	A-1	[illegible]	[illegible]	[illegible]	[illegible]				14,450	Derailed 7th to 16th cars due to heavy rain undermining track.
(194)	7-10	Kim-Stoval	D-e	2-414	65	20	None				565	Three cars derailed while backing, due to defective [illegible]
(195)	7-11	Wagon	D-d	X-3752-W	66	6	None				635	Back side rod on engine broke due to old flaw.
(196)	7-20	Fortuno	L-b	320	44	20	None				4,688	Engine backing with two cars ahead of engine collided ances of train due to engine being unable to stop reco reservoir pipe of engine breaking off.
(197)	7-6	Oxford	C-i	610	55	30	S. T. Mote J. F. Martin H. T. Stapp	Engineer Fireman Brakeman	6 Permanent 30			
(198)	7-20	Copperdine	L-b	2-310	54	20	None				500	Main rod strap on engine broke.
(199)	7-22	San Carlos	L-c	142	34	5	None				750	Main axle on engine broke due to hidden defect.
(200)	7-28	Tucson	D-e	X-3316-W	66	15	None				242	Derailed 41st and 42nd cars due to brake beam droppin breaking account brake hanger key bolt missing.
(201)	8-12	Douglas	B-1	67	18	25	None				1,095	Derailed 12th and 13th cars due to heavy carload of c and uneven superelevation of track.
(202)	12-1	Chevas	L-b	402	35	15	None				800	Main rod strap on engine broke.

YEAR 1938

(203)	1-29	Thebe	L-c	X-2546-W	65	3	None				175	Main axle on engine broke due to progressive fractur
(204)	2-2	Pembroke-Colfred	M-b	X-3324-W	69	38	None				255	One car derailed due to arch bar breaking.
(205)	2-3	Amole	L-b	1-410	70	10	None				250	Middle main rod strap broke on locomotive.
(206)	3-3	Oregoun	L-b	414	70	10	None				280	Side rod of engine failed due to flaw.
(207)	3-4	Acacos	L-b	2-412	70	5	None				220	Middle main rod of engine broke due to flaw.
(208)	3-13	San Grande	L-c	1-415	70	1	None				250	Main axle of engine broke due to flaw.
(209)	3-21	Bisbee Junction	L-b	190	69	15	None				200	Center crank pin of locomotive broke.
(210)	3-24	Gerlach	L-b	310	61	20	None				300	Middle main rod of engine broke.
(211)	4-5	Hanford	L-c	X-5011-W	67	15	None				300	Cylinder head of locomotive knocked out due to head and middle main rod.
(212)	4-20	Blanch	L-b	1-856	65	Standing	None				450	Axle on engine broke due to flaw.
(213)	5-26	Reno	L-b	X-5021-W	67	6	J. B. H. Hunt.	Br man		18	250	Train broke-in-two due to defective knuckle on firel
(214)	5-5	Arlington-Marie	L-b	902	68	30	None				500	Right crosshead brake and right cylinder of [illegible]
(215)	6-8	Javot	L-c	X-5014-W	67	5	None				500	Main axle of engine broke.
(216)	6-22	Javot	L-c	1-852	70	10	None				400	Main axle of engine broke.
(217)	6-29	Wilcox	L-c	X-5026-W	68	35	None				500	Main axle of engine broke.
(218)	7-1	Javot	L-c	1-852	70	8	None				180	Main axle of engine broke.
(219)	7-13	Lee	L-c	960	63	25	None				1,820	Car destroyed by fire, probably due to match or cig dropped in car during process of loading.
(220)	7-15	Pinacno	M-h	1-904	52	Standing	None				400	Engine derailed due to main axle on engine breaking
(221)	7-15	Tuma	D-e	2-848	52	2	None				799	Three cars which were being dropped derailed at dec ability to hold cars with hand brakes.
(222)	8-11	Wagon	D-i	X-5023-W	5	10	None					

* - Caused from sudden stipping, starting, lurch, or jerk of car or train

	1936						YEAR 1936 (Continued)				
(284)	11-1	Dublin	D-i	X-8766-E	63	10	None	-	-	$1,071	Derailment caused by cow running on track in front of train, being struck by engine and rolling under train.
(285)	11-5-8	Gila	C-h	Unknown	-	-	-	-	-	800	Caboose damaged. Cause of accident, train involved, and exact date of accident undetermined.
(286)	11-11	Tucson	M-b	1-854	58	4	None	-	-	700	Break-in-two caused by undesidered emergency as train was stopping in yard, slack action buckling 20th car from engine.
(287)	11-7	Toltec	M-b	2-854	66	30	None	-	-	1,680	Carload of cedar poles caught or set on fire.
(288)	12-5	Bosque	L-c	1-856	61	2	None	-	-	350	Main axle of locomotive broke.
(290)	12-6	Sibyl	L-b	2-864	70	10	None	-	-	545	Middle main rod strap of engine broke.
(291)	12-19	Cavot	L-c	2-866	63	12	None	-	-	350	Main axle of locomotive broke.
(292)	12-24	Clifton	D-d	952	8	4	None	-	-	547	Derailment caused by uneven surface of track.
	1937						YEAR 1937				
(293)	1-1	Gila	C-h	X-3312-E	66	5	None	-	-	800	Wooden underframe caboose buckled by hard coupling.
(294)	1-10	Cutter	D-d	X-2766-E	18	25	None	-	-	1,675	Derailment caused by rail breaking under 12th car from engine.
(295)	1-18	Gila	C-h	X-3636-W	66	6	None	-	-	1,040	Caboose coupled to rear of train at excessive speed, causing damage to caboose and engine.
(296)	1-18	Gila	C-h	1-854	63	3	None	-	-	155	Caboose cornered in switching movement.
(297)	1-24	Casa Grande	L-c	3-854	63	8	None	-	-	350	Main axle on locomotive broke.
(298)	2-13	Aztec	M-b	X-4316-E	42	1	None	-	-	350	Water column broke when fireman pulled spout around before engine stopped, the spout hitting hand rail and catching on sprinkler valve.
(299)	2-14	Lusena	L-b	2-862	62	30	None	-	-	200	Left eccentric crank pin on engine broke off.
(300)	2-26	San Carlos	D-d	884	48	15	None	-	-	172	Derailment caused by rail breaking under train.
(301)	2-23	Oasipos	D-c	3-843	45	30	None	-	-	325	Derailment caused by heavy thrust on left front side bearing due to rigidity of car.
(302)	3-25	Gila	L-b	1-854	53	1	None	-	-	250	Left main rod of engine broke.
(303)	3-26	Empire	D-c	X-5035-E	65	35	None	-	-	1,805	Derailment caused by wheel breaking on 38th car from engine due to overheating on account of defective triple.
(304)	3-31	San Pedro	M-b	X-5011-W	62	25	None	-	-	165	Motor car struck by locomotive due to failure to provide flag protection.
(305)	4-2	Ligurta	M-b	902	64	25	None	-	-	2,112	Truck side broke under 11th car from engine, truck dropping down and damaging track.
(306)	4-13	Rasa	L-b	X-5042-E	66	30	None	-	-	350	Piston rod to middle cylinder of engine broke due to concealed progressive fracture.

(292)	12-24	Clifton	D-d	952	8	4	None		-	-	547	Derailment caused by uneven surface of track.
	1937						YEAR 1937				
(293)	1-1	Gila	C-h	X-3312-E	66	5	None		-	-	800	Wooden underframe caboose buckled by hard coupling.
(294)	1-10	Cutter	D-d	X-2766-E	18	25	None		-	-	1,675	Derailment caused by rail breaking under 12th car from engine.
(295)	1-18	Gila	C-h	X-3636-W	66	6	None		-	-	1,040	Caboose coupled to rear of train at excessive speed, causing damage to caboose and engine.
(296)	1-18	Gila	C-h	1-854	63	3	None		-	-	155	Caboose cornered in switching movement.
(297)	1-24	Casa Grande	L-s	3-854	63	8	None		-	-	350	Main axle on locomotive broke.
(298)	2-13	Aztec	M-b	X-4316-W	42	1	None		-	-	350	Water column broke when fireman pulled spout around before engine stopped, the spout hitting hand rail and catching on sprinkler valve.
(299)	2-14	Lucena	L-b	2-862	62	30	None		-	-	200	Left eccentric crank pin on engine broke off.
(300)	2-16	San Carlos	D-d	884	48	15	None		-	-	172	Derailment caused by rail breaking under train.
(301)	2-23	Oempos	D-e	3-843	45	30	None		-	-	325	Derailment caused by heavy thrust on left front side bearing due to rigidity of car.
(302)	3-25	Gila	L-b	1-854	53	1	None		-	-	250	Left main rod of engine broke.
(303)	3-26	Empire	D-e	X-5035-E	65	35	None		-	-	1,805	Derailment caused by wheel breaking on 38th car from engine due to overheating on account of defective triple.
(304)	3-31	San Pedro	M-b	X-5011-W	62	25	None		-	-	165	Motor car struck by locomotive due to failure to provide flag protection.
(305)	4-2	Liguria	M-b	902	64	25	None		-	-	2,112	Truck side broke under 11th car from engine, truck dropping down and damaging track.
(306)	4-13	Rasa	L-b	X-5042-W	66	30	None		-	-	350	Piston rod to middle cylinder of engine broke due to concealed progressive fracture.
(307)	4-22	Yuma	D-e	3-824	69	12	None		-	-	971	Derailment caused by bottom rod under 15th car from engine dropping under car and engaging duck boards.
(308)	4-28	Curve	D-e	X-5030-W	66	15	None		-	-	311	Derailment caused by rigid truck on 42nd car from engine.
(309)	5-5	Gila	D-e	3-843	55	6	None		-	-	450	Main axle of engine broke.
(310)	6-17	Oempos	D-e	3-843	64	25	None		-	-	360	Rear truck of 43rd car derailed on curve, apparently due to rigidity of truck.
(311)	6-23	Chella	D-e	1-864	65	40	None		-	-	5,863	Derailment caused by cast iron wheel breaking under 61st car from engine.
(312)	6-25	Cavet	L-e	1-862	64	10	None		-	-	450	Main axle of engine broke.
(313)	6-26	Gila	C-h	X-3615-W	66	12	None		-	-	300	Cars rolled down grade and collided with rear of train due to failure to set sufficient hand brakes to hold cars on grade.
(314)	7-17	Radium	D-e	X-2587-E	21	15	None		-	-	1,370	Lead truck of 9th car from caboose derailed due to rigidity of truck, causing derailment of following 7 cars and caboose.
(315)	8-2	Irene	M-b	3-864	53	20	None		-	-	400	Second car from caboose buckled due to heavy service application of air brakes made to stop train when engine struck cow.
(316)	8-6	Mohawk	D-e	1-842	70	6	None		-	-	264	Inside rail on curve turned outward, derailing engine, apparently due to rigidity of engine while rounding curve.
(317)	8-20	Sibyl	L-b	1-864	70	10	None		-	-	415	Back-end middle main rod strap of engine broke.

	DATE (a)	LOCATION (b)	I.C.C. CLASS (c)	TRAIN NUMBER (d)	NO. CARS IN TRAIN (e)	SPEED M.P.H. (f)	PERSON INJURED: NAME (g)	PERSON INJURED: OCCUPATION (h)	ESTIMATED DISABILITY (DAYS) (i)	TOTAL DAMAGE (j)	DESCRIPTION OF ACCIDENT (k)
	1937						YEAR 193 (Continued)				
(318)	8-27	Gaspos	D-c	2-843	40	25	None	-	-	$ 525	Derailment caused by axle breaking on 6th car from caboose.
(319)	9-4	Phoenix	M-n	901	61	8	None	-	-	210	Train struck auto on public crossing.
(320)	9-5	Chelle	D-g	4-864	70	4	None	-	-	335	Engine derailed due to failure to line derailer for movement out of siding.
(321)	9-9	Clifton	D-d	X-17-7-E	9	15	None	-	-	420	One car derailed due to irregular and excessive superelevation of track.
(322)	9-9	Glen	M-c	866	36	3	None	-	-	290	One car derailed due to axle breaking.
(323)	9-11	Marsh	M-b	1-865	50	35	None	-	-	445	Derailment caused by coupler of car dropping between rails due to horizontal key working out.
(324)	9-21	Buckeye	M-i	901	59		None	-	-	225	Engine trucks and drivers of engine derailed on 2 degree curve due to insufficient weight on engine trucks and wide gauge of track.
(325)	9-22	Bene	D-g	2-864			None	-	-	535	Derailment caused by reversing movement after engine ran through switch.
(326)	9-27	Peoria	M-b	1-845	3		None	-	-	175	Water column broke when fireman pulled water spout around while engine was moving.
(327)	10-6	Fontana	M-b	1-866	67		None	-	-	500	Middle main rod of engine broke.
(328)	10-29	Yuma	M-b	1-844	70		None	-	-	500	Right main pin of engine broke off.
(329)	11-12	Gila	C-d	(3-857 (3-844)			None	-	-	1,710	Engine backing with water car behind engine and caboose ahead of engine side raked three cars in approaching train.
(330)	11-17	Bisbee Junction	D-b	X-3314-E			None	-	-	640	Derailment caused by drawbar pulling out of 50th car from engine due to failure of metal at back of coupler yoke.
(331)	12-11	Stanwix	D-c	2-841	47	10	None	-	-	5,235	Derailment of ten cars caused by truck frame breaking at old weld.
	1938						YEAR 1938				
(332)	1-7	Clifton	D-d	952	7	6	None	-	-	395	Engine derailed due to wide gauge of track approaching frog.
(333)	1-22	Mohawk	L-b	2-841	49	2	None	-	-	300	Left intermediate front connecting rod of engine broke.
(334)	1-23	Coolidge	D-g	X-3240-E	23	4	None	-	-	686	Engine and tender derailed due to trakeman's failure to get switch over before engine hit switch points.
(335)	2-8	Gila	D-d	1-842	70	3	None	-	-	412	Derailment of four cars caused by loose wheel on lead truck of car.
(336)	2-24	Yuma	C-d	(357 (70 Eng.	12 56	Standing 1	None	-	-	240	Yard engine pulling 54 cars cornered road engine on lead.
(337)	3-3	Chandler	L-c	X-3318-E	49	6	None	-	-	400	Main journal of engine broke.
(338)	3-27	Mesa	M-n	1-904	48	6	None	-	-	0 750	Train struck auto truck and trailer on city street crossing.
(339)	4-29	Thebe	C-b	X-3652-E	63	8	None	-	-	325	Engine and water car backing up in switching movement made hard coupling with cars not in train.
(340)	4-?	Bene									

(328)	10-29	Yuma	L-b	844	72	3	None					500	Middle main rod of engine broke.
(329)	11-12	Gila	C-d	(3-843 (3-843								500	Right main pin of engine broke off.
(330)	11-17	Bisbee Junction	D-b	X-3304			None					1,710	Engine backing with water car behind engine and caboose ahead of engine side raked three cars in approaching train.
(331)	12-11	Stanwix	D-c	2-861	49	10	None					640	Derailment caused by drawbar pulling out of 50th car from engine due to failure of metal at back of coupler yoke.
	1938											5,235	Derailment of ten cars caused by truck frame breaking at old weld
							YEAR 1938						
(332)	1-7	Clifton	D-d	952	7	8	None					395	Engine derailed due to wide gauge of track approaching frog.
(333)	1-22	Mohawk	L-b	2-861	69	2	None					300	Left intermediate front connecting rod of engine broke.
(334)	1-23	Coolidge	D-b	X-3220-B	23	4	None					685	Engine and tender derailed due to brakeman's failure to get switch over before engine hit switch points.
(335)	2-6	Gila	D-c	1-842	70	8	None					412	Derailment of four cars caused by loose wheel on lead truck of car.
(336)	2-24	Yuma	C-d	(357 (Yd. Eng.	32 56	Standing 1	None					240	Yard engine pulling 54 cars cornered road engine on lead.
(337)	3-3	Chandler	L-c	X-3812-B	49	6	None					400	Main journal of engine broke.
(338)	3-27	Mesa	M-b	1-904	58	6	None					750	Train struck auto truck and trailer on city street crossing.
(339)	4-29	Thebe	C-d	X-3652-B	63	3	None					325	Engine and water car backing up in switching movement made hard coupling with cars not in train.
(340)	6-7	Bowie	L-b	2-923-A	70	1	None					250	Fireman swung water spout over tank as engineer moved engine to make re-spot, spout catching on brake wheel and being broken off.
(341)	6-13	Tucson	C-b	(X-3613-B (Yd. Eng.	65 2	1 30	C. T. Bruce	Conductor	7			235	Car cut off without rider made hard coupling with another car, cars running down and colliding with caboose.
(342)	7-17	Sentinel	D-c	2-844	70	25	None					1,696	Derailment caused by journal breaking off on 42nd car from engine due to overheating.
(343)	7-22	Benson	L-c	862	70	1	None					450	No. 2 crank axle of locomotive broke.
(344)	7-27	Stark	L-b	962	59	18	None					175	Middle crosshead of engine broke.
(345)	8-1	Sibyl	L-c	2-845	69	20	None					450	Main driving axle of engine broke.
(346)	8-22	Yuma	M-b	901	66	6	None					450	Three deadhead cabooses on rear of train damaged when emergency stop made to avoid striking another engine.
(347)	9-3	Mohawk	D-c	X-3612-B	66	35	[illegible]	Conductor	6			355	Scale car next ahead of caboose derailed and reraised, caboose derailed due to up and down motion caused by ballasted weights, breaking train line, sudden stop of train causing injury to conductor in caboose.
(348)	9-[illegible]	[illegible]	D-c	962	28	3	None					165	Rear drivers of locomotive climbed rail on curve, causing derailment of all drivers, due to radial buffer between engine and tender being too tight.
(349)	9-[illegible]	[illegible]	M-b	X-3619-B	58	5	None					200	Trespasser stepped on cutting lever, parting train, air brakes going into emergency causing rough stop.
(350)	9-[illegible]	[illegible]	L-b	X-803-B	26	5	None					195	Left main pin of engine broke.

- Caused by sudden stopping, starting, lurch or jerk of car or train

(381)	5-14	Lirim	D-c	5-843	64	30	None	-	-	867	One car derailed account truck side gave way on 40th car from engine.
(382)	5-31	Maricopa	D-g	2-856	69	8	None	-	-	173	Caboose derailed account brakeman throwing switch under car.
(383)	6-2	Muggins	D-c	X-3701-W	65	35	None	-	-	681	Sixteenth car ahead caboose derailed account brake beam dropped down under car wheel.
(384)	6-14	Yuma	D-d	X-1643-E	30	8	None	-	-	565	Derailed one car account irregular elevation in track.
(385)	7-11	Gila	M-b	852	64	4	None	-	-	1,000	Portable caboose lamp fell on car floor, fire destroying superstructure of caboose.
(386)	7-13	Casador	L-b	X-5004-W	60	25	None	-	-	325	Middle main rod failed on engine.
(387)	7-18	Hayden	C-h	X-3208-E	2	10	None	-	-	600	Loaded ore car not properly secured, ran down heavy grade and collided with another car under load.
(388)	7-21	Radium	D-i	X-2521-E	14	15	None	-	-	525	Car derailed account uneven track and high load.
(389)	7-26	Navieta	L-b	X-3687-W	70	35	None	-	-	306	Left main crank pin broke on engine.
(390)	8-2	Phoenix	M-b	902	36	6	None	-	-	280	Journal burned off car, allowing truck side to drop.
(391)	9-7	Smelter	D-d	952	6	15	None	-	-	412	One car derailed account irregular elevation of track.
(392)	9-21	Toltec	D-c	X-3309-W	58	40	None	-	-	1,441	One car derailed account broken overheated wheel 9th car from engine.
(393)	9-26	Altich	L-c	2-845	63	12	None	-	-	400	Main crank pin on engine broke.
(394)	10-13	Curvo	C-a	X-5033-W X-3319-W	66 Lt.Eng.	Standing 10	None	-	-	500	Light engine collided with caboose of train standing in siding.
(395)	10-29	Douglas	L-b	962	70	8	None	-	-	350	Middle crank pin on engine 5019 broke.
(396)	12-21	Tucson	D-d	X-3327-E	60	15	None	-	-	335	Engine and 5 cars derailed account broken switch point.
(397)	12-23	Tucson	C-d	3-845 Eng.3710	63 Lt.Eng.	7 7	None	-	-	1,677	Light engine moving to roundhouse side-raked cars in moving train.
(398)	12-25	Hayden Jct.	D-i	X-3207-E	18	6	None	-	-	340	Engine and 2 cars derailed when slack run in at switch.

Defendant's Exhibit No. 290 (Witness J.J. Sullivan)
Feb. 6, 1941

SOUTHERN PACIFIC COMPANY
(Pacific Lines)

DETAIL OF TRAIN ACCIDENTS,
ROAD FREIGHT TRAIN OPERATION,
REPORTED TO THE INTERSTATE COMMERCE COMMISSION
YEARS 1923 TO 1939, INCLUSIVE

STATE OF NEVADA

	DATE (a)	LOCATION (b)	I.C.C. CLASS (c)	TRAIN NUMBER (d)	NO. CARS IN TRAIN (e)	SPEED M.P.H. (f)	PERSON INJURED NAME (g)	OCCUPATION (h)	ESTIMATED DISABILITY (Days) (i)	TOTAL DAMAGE ($) (j)	DESCRIPTION OF ACCIDENT (k)
	1923										
(1)	1-21	Mazan	D-g	X-2595-W	74	10 to 12	None			$ 615	Derailed 1 car and damaged 6 others, when train parted due to knuckle breaking while attempting to cut off Extra 2566 which was helping train out of yard.
(2)	5-27	Tioga	D-c	2-280	57	20	None			627	Derailed 25th car from caboose due to broken defective cast-iron wheel.
(3)	5-22	Gerald	D-d	X-2565-W	65		None			218	Derailed 47th and 48th cars from engine on siding due to broken rail.
(4)	5-26	Argo	M-b	X-2525-W	72		None			200	Piece of 4-1/2 inch pipe 16 feet long fell from 8th car from caboose and damaged automatic block signal.
	6-9	Carlin	C-d	1-276 (Yard eng.	55	10	None			6,078	Yard engine side swiped train pulling into yard on yard track, damaging 47 cars and derailing yard engine, negligence of enginemen.
	6-14	Desert	D-d	1-276						977	Derailed 8 cars on siding due track out of line apparently caused by sun kink.
(7)	6-21	Montello	D-d	X-321						441	Derailed 2 cars on yard track as train was pulling out of yard due broken lug on switch stand allowing connecting rod to come loose.
(8)	6-15	Pequop	D-g	1-262	69	3 to 4				598	Derailed 7 cars on main track due to a brakeman of train in siding unlocking switch and partially throwing switch.
(9)	6-27	Carlin	M-b	X-3209-W	97	5	None			400	30th car from caboose buckled due to run-in of slack as train was stopping.
(10)	7-26	Sparks	C-i	X-2588-W	75	5 to 8	None			850	Two cars with hand brakes insufficiently set, rolled out of yard track and collided with side of train pulling into yard, damaging 4 cars.
(11)	7-25	Osino	D-b	X-2800-W	55	25	None			1,160	Derailed 6 cars behind engine, due to coupler pulling out of engine tender and falling on track caused by emergency action of brakes due to knuckles slipping by between 2nd and 3rd cars ahead of caboose.
(12)	7-8	Granite Point	M-b	X-2577-W	85	3	W.S. Roberts	Brakeman	15	720	Sudden stop due to undesired emergency as train was stopping in siding caused injury to brakeman in caboose cupola, and damaged 26th and 27th cars from caboose.
(13)	8-19	Imlay	C-h	X-2983-W	Caboose at time	7 to 10	A.C. Bailey W.A. Truesdale	Conductor Brakeman	30 20	990	Incoming engine which had been detached from train and moving on lead collided with 2 cabooses which had been taken off train, injured men being inside one of the cabooses.
(14)	8-4	Hazen	D-c	4-280	56	10	None			684	Derailed 21st and 22nd cars from caboose, due to wheel on 22nd car breaking caused by overheating.
(15)	8-14	Stone House	D-c	X-2762-W	54	35	None			183	Derailed 2nd car from engine due to defective [illegible]

												out of yard.
(2)	5-21	Tiago	D-c	2-280	57	26	None			-	627	Derailed 25th car from caboose due to broken defective cast-iron wheel.
(3)	5-22	Gerald	D-dc	X-2565-W	65	4	None			-	218	Derailed 47th and 48th cars from engine on siding due to broken rail.
(4)	5-16	Argo	M-b	X-2524-W	72	25	None			-	200	Piece of 4-1/2 inch pipe 16 feet long fell from 8th car from caboose and damaged automatic block signal.
(5)	6-9	Carlin	G-d	(1-276 (Yard dir.	55	10	None			-	6,078	Yard engine side swiped train pulling into yard on yard track, damaging 47 cars and derailing yard engine, negligence of enginemen.
(6)	6-20	Desert	D-d	1-262			None			-	977	Derailed 8 cars on siding due track out of line apparently caused by sun kink.
(7)	6-21	Montello	D-d	X-3810-W			None			-	441	Derailed 2 cars on yard track as train was pulling out of yard due broken lug on switch stand allowing connecting rod to come loose.
(8)	6-15	Pequop	D-g	1-262	49	3 to 4	None			-	598	Derailed 7 cars on main track due to a brakeman of train in siding unlocking switch and partially throwing switch.
(9)	6-27	Carlin	M-b	X-3209-W	97	5	None			-	400	30th car from caboose buckled due to run-in of slack as train was stopping.
(10)	7-26	Sparks	C-i	X-2528-W	75	5 to 8	None			-	850	Two cars with hand brakes insufficiently set, rolled out of yard track and collided with side of train pulling into yard, damaging 4 cars.
(11)	7-25	Osino	D-b	X-2800-W	55	25	None			-	1,160	Derailed 6 cars behind engine, due to coupler pulling out of engine tender and falling on track caused by emergency action of brakes due to knuckles slipping by between 2nd and 3rd cars ahead of caboose.
(12)	7-8	Granite Point	M-b	X-2577-W	85	3	#G.E.Roberts	Brakeman	15		720	Sudden stop due to undesired emergency application of train was stopping in siding, caused injury to brakeman in caboose cupola, and damaged 26th and 27th cars from cabooses
(13)	8-17	Imlay	C-h	X-2783-W	Caboose at time	7 to 10	A.C.Bailey W.A.Truesdale	Conductor Brakeman	30 20		990	Incoming engine which had been detached from train and moving on lead, collided with 2 cabooses which had been taken off train, injured men being inside one of the cabooses.
(14)	8-4	Mazen	D-c	4-280	56	10	None			-	684	Derailed 21st and 22nd cars from caboose, due to wheel on 22nd car breaking caused by overheating.
(15)	8-14	Stone House	D-c	X-2762-W	54	35	None			-	183	Derailed 2nd car from engine due to defective drawbar pulling out of the 1st car from engine.
(16)	8-22	Fernley	D-g	X-2718-W	23	4	None			-	353	Derailed 4 cars on yard track due to movement reversed after running through switch which had not been properly lined by brakeman.
(17)	8-30	Clark	D-g	4-276	69	8	None			-	319	Derailed rear car of train and caboose due to deadhead fireman on a light engine in siding throwing switch under train.
(18)	8-28	Fernley	D-h	6-262	37	8	None			-	178	Derailed and buckled 5th and 6th cars from engine and damaged car behind engine due to emergency action of brakes caused by trespasser stepping on cutting lever as train backing in siding.
(19)	9-30	Peliçade	D-i	4-276	50	8	None			-	329	Derailed 24th car from head end due to combination of low joint in track on outside of curve and rigid truck.
(20)	10-15	Moor	C-4	(X-3226-W (X-3231-W		8 to 9) 3)	None			-	5,320	Helper engine after helping train 2-262 and turning on wye, fouled main track and was struck by train moving on main track (11:42 AM).
(21)	10-16	Imlay	D-c	1-262	50	8	None			-	750	Derailed 3 cars ahead of caboose and damaged 4th car as train was pulling out of yard, due to 34 inch piece of flange broken out of wheel, 2nd car ahead of caboose which had not been detected by car inspectors at Imlay.
(22)	10-2	Winnemucca	C-f	2-280	50	6	None			-	850	Engine with caboose and one outfit car collided with standing portion of train while replacing caboose on train, after setting out 2 sleeping cars from rear of train.
(23)	11-13	Imlay	C-h	2-262	55	10 to 15	None			-	825	Engine with caboose ahead of it, collided with standing portion of train and demolished the caboose while making drop of car behind the engine, due to brakeman throwing wrong switch.

- Caused from sudden stopping, starting, lurch, or jerk of car or train.

	DATE (a)	LOCATION (b)	I.C.C. CLASS (c)	TRAIN NUMBER (d)	NO. CARS IN TRAIN (e)	SPEED M.P.H. (f)	PERSON INJURED NAME (g)	OCCUPATION (h)	ESTIMATED DISABILITY (Days) (i)	TOTAL DAMAGE (j)	DESCRIPTION OF ACCIDENT (k)
	1923						YEAR 1923 (CONTINUED)				
(24)	11-5	Felaia	D-c	1-280	54	4		-	-	200	Derailed 3rd and 4th car from engine on siding, caused by brake beam coming down on 3rd car due to broken brake beam hanger.
(25)	11-26	Desert	D-c	1-276	61	20 to 25	None	-	-	565	Derailed 17th car from caboose on main track due to broken cast-iron wheel caused by overheating.
(26)	11-30	Vivian	M-b	X-2520-W	85	10	#A.E.Higbee #S.C.Bohon #J.S.Cosgrave	Conductor Brakeman Brakeman	10 4 8	395	Train parted as it was being stopped due to drawbar in engine tender falling out on account of carrier-iron breaking. Emergency action of brakes caused damage to 7 cars and injured trainmen in caboose.
(27)	12-1	Imlay	C-h	5-280	54	8 to 10	None	-	-	750	Engine with caboose ahead of it, collided with standing portion of train and demolished the caboose while placing the caboose on train.
	1924						YEAR 1924				
(28)	1-21	Fernley	C-h	X-2522-E	39	5 to 10	None	-	-	815	Engine collided with standing portion of train damaging head car, while making drop of car due to brakeman improperly handling switch.
(29)	1-14	Golconda	L-b	X-2755-W	55	35	None	-	-	160	Front end of right main rod broke through wrist pin hole on engine 2755.
(30)	4-12	Sodaville	D-c	192	12	25 to 30	None	-	-	350	Engine tender derailed due to broken axle.
(31)	5-16	Belleville	D-g	192	12	6	None	-	-	237	Engine and car derailed due to brakeman not properly throwing switch during switching move.
(32)	6-12	Moor	D-g	258	104	6	None	-	-	982	Derailed 1 car and buckled another, while making stop in siding due to improper handling of independent brake by engineer.
(33)	7-20	Tecoma	C-h	X-3202-W	94	8 to 12	B. Stoddhan	Brakeman	10	1,661	Engine shoving 44 cars on Tuttle Branch for storage collided with standing cut of 61 cars which had been left there by same crew, due to failure of conductor to properly safeguard move. Brakeman knocked from car when impact occurred.
(34)	8-5	Sparks	D-g	X-2718-E	75	6 to 8	None	-	-	339	Derailed 3rd and 4th car from engine as train was pulling into yard due to yardman throwing switch under train. Derailed cars sideswiped passenger engine standing on track, fireman of which was injured when he jumped from engine in anticipation of collision.
(35)	8-17	Desert	M-b	X-2852-W	84	25	None	-	-	530	Airhose burst on 7th car from engine. Emergency action of brakes buckled 9th car from caboose.
(36)	8-27	Verdi	D-c	X-4003-E	55	18	None			9,070	Derailed 1 car with considerable damage to track account broken wheel due to overheating.
(37)	9-16	Sutcliffe	M-a	(X-2762-W (X-1795-W	42 Light	Standing) 10 to 15)	None	-	-	910	Light Extra 1795-West collided with rear of Extra 2762 West demolishing caboose, and damaging car ahead of caboose and engine 1795, due to failure of flagman of freight train to protect rear of his train.
(38)	9-12	Montello	C-h	2-276	5	10	S. Guie	Contract cook	4	175	Two cars cut off during switching move collided with occupied outfit cars in violation of rules.
(39)	9-21	Ditho	D-c	1-258	55	25	None	-	-	2,476	Derailed 10th car ahead of caboose, due to broken cast-iron wheel caused by old flaw.
(40)	10-27	Elko	D-d	1-280	60		None		-	595	Engine derailed due to defective switch caused by it having been run through previously and yardman failing to safeguard the defective condition.
(41)	10-5	Palisade	M-b	1-276	53	20	None	-	-	250	M. of W. gasoline motor car struck by train.
(42)	11-24	Ditho	D-c	1-258	60	20 to 25	one	-	-	265	Derailed 21st car from engine due to broken cast-iron wheel caused by overheating.

1)	5-16	Belleville	D-g	192	12	6	None	-	-	-	237	Engine and car derailed due to brakeman not properly throwing switch during switching move.
32)	6-12	Moor	D-g	258	104	6	None	-	-	-	982	Derailed 1 car and buckled another, while making stop in siding due to improper handling of independent brake by engineer.
33)	7-20	Tecoma	C-h	X-3202-W	94	8 to 12	B. Stockham	Brakeman	10	-	1,661	Engine shoving 44 cars on Tuttle Branch for storage collided with standing cut of 61 cars which had been left there by same crew, due to failure of conductor to properly safeguard move. Brakeman knocked from car when impact occurred.
34)	8-5	Sparks	D-g	X-2718-W	75	6 to 8	None	-	-	-	339	Derailed 3rd and 4th car from engine as train was pulling into yard due to yardman throwing switch under train. Derailed cars sideswiped passenger engine standing on track, fireman of which was injured when he jumped from engine in anticipation of collision.
35)	8-17	Desert	M-b	X-2852-W	87	25	None	-	-	-	530	Airhose burst on 7th car from engine. Emergency action of brakes buckled 9th car from caboose.
36)	8-27	Verdi	D-c	X-4003-E	55	18	None				2,070	Derailed 1 car with considerable damage to track account broken wheel due to overheating.
37)	9-16	Sutcliffe	C-a	(X-2762-W (X-1795-W	42 Light	Standing) 10 to 15)	None	-	-	-	910	Light Extra 1795-West collided with rear of Extra 2762 West demolishing caboose, and damaging car ahead of caboose and engine 1795, due to failure of flagman of freight train to protect rear of his train.
38)	9-12	Montello	C-h	2-276	5	10	S. Guie	Contract cook	4	-	175	Two cars but off during switching move collided with occupied outfit cars in violation of rules.
39)	9-21	Ditho	D-c	1-258	55	25	None	-	-	-	2,476	Derailed 10th car ahead of caboose, due to broken cast-iron wheel caused by old flaw.
40)	10-27	Elko	D-d	1-280	60		None	-	-	-	595	Engine derailed due to defective switch caused by it having been run through previously and yardman failing to safeguard the defective condition.
41)	10-5	Palisade	M-b	1-276	53	20	None	-	-	-	250	M. of W. gasoline motor car struck by train.
42)	11-24	Ditho	D-c	1-258	68	20 to 25	one	-	-	-	265	Derailed 21st car from engine due to broken cast-iron wheel caused by overheating.
43)	12-14	Farren	C-d	(X-2526-W (X-2825-W	54 52	2 10 to 20)	None	-	-	-	1,374	Extra 2825 West moving on main track collided with Extra 2526 West pulling out of siding, due to failure of employes on Extra 2526-West to protect before fouling main track.
44)	12-23	Hunter	M-b	272	54	25	None	-	-	-	175	M. of W. gasoline motor car struck by train.
	1925						YEAR 1925					
3)	1-18	Comus	D-c	X-2710-W	54	30	None	-	-	-	278	Derailed 3rd car ahead of caboose due to broken journal caused by flaw.
4)	1-19	Sparks	M-b	X-2531-W	83	5	None	-	-	-	175	Run-in of slack caused the 16th car from caboose to be telescoped by the 15th car.
7)	2-22	Tioga	D-c	272	94	6 to 8	None	-	-	-	573	Derailed 38th car from head end due to drawbar falling out of car caused by keeper in drawbar key losing out.
9)	3-24	Carlin	M-b	X-3203-E	84	4 to 6	None	-	-	-	375	Sudden stop due to undesired emergency as train was stopping in yard, buckled 10th and 11th cars from caboose.
)	4-27	Desert	D-c	X-2569-W	5	30 to 35	None	-	-	-	690	Derailed 1st car behind engine due to broken defective arch bar.
	5-1	Elburz	D-c	X-280	67	5	None	-	-	-	210	Derailed 15th car from engine pulling out of siding due to new car with rigid trucks and reverse elevation in turnout.
)	6-13	Halleck	M-b	X-2563-W	55	30	None	-	-	-	1,350	The 28th car from caboose discovered on fire, apparently originating from brake shoe friction, car set out of train at Elburz and was entirely destroyed.
)	7-10	Oreana	D-a	X-2852-W	90	20	None	-	-	-	610	Derailed 20th car ahead of caboose due to draft rigging pulling out of car and falling on track when undesired emergency action of brakes occurred, caused by defective triple.

- Caused from sudden stopping, starting, lurch, or jerk of car or train.

Sheet 3 of 9 sheets.

1931 YEAR 1931

(134)	1-16	Hazen	L-b	194	2	15	None	-	-	200	Right main rod pin broke off next to wheel center and knocked out right cylinder head, engine 2173.
(135)	1-19	Eglon	C-h	X-1785-W	33	6	None	-	-	373	One car collided with another during a switching move, due to car being left standing on grade without hand brake being set.
(136)	1-25	Zenobia	D-c	259	110	28	None	-	-	315	Derailed 53rd car from engine due to airhose blowing off 18th car from engine which caused steel draft arm 53rd car to be broken off at body bolster and truck pulled out from under car.
(137)	1-22	Wolis	D-h	X-4336-W	133	8	None	-	-	678	Derailed and buckled 53rd car from caboose when emergency action of brakes occurred due to trespasser stepped on cutting lever between 5th and 6th cars.
(138)	8-11	Flanigan	D-c	183	33	3	None	-	-	180	Derailed 23rd car from head end due to bottom rod dropping down and raising truck from rails, while switching on interchange track.
(139)	8-9	Cobre	M-b	292	98	15	None	-	-	600	Buckled 69th car from engine when emergency action of brakes occurred due to defective branch pipe on 69th car.
(140)	8-21	Walls	M-b	X-4373-W	87	8	None	-	-	785	Buckled 79th and 80th cars from engine when emergency action of brakes occurred due to trespasser stepping on cutting lever 10th car from engine.

	DATE (a)	LOCATION (b)	I.C.C. CLASS (c)	TRAIN NUMBER (d)	NO. CARS IN TRAIN (e)	SPEED M.P.H. (f)	PERSON INJURED NAME (g)	PERSON INJURED OCCUPATION (h)	ESTIMATED DISABILITY (Days). (i)	TOTAL DAMAGE (j)	DESCRIPTION OF ACCIDENT (k)
	1931						YEAR 1931 (CONTINUED)				
(141)	9-22	Moor	M-b	2-292	125	2	None	-	-	$ 500	Buckled 66th car from engine while train moving in siding due to too much braking power on head end and engineer improperly handling air.
(142)	10-26	Wells	M-b	1-292	125	4	None	-	-	505	Buckled 58th car from engine due to undesired emergency action of brakes as train was stopping in siding.
(143)	11-24	Alaxon	D-b	3-292	80	15	None	-	-	945	Derailed 4th car from engine due to defective drawbar pulling out of 3rd car and falling on track.
	1932						YEAR 1932				
(144)	1-31	Valley Pass	D-e	292	85	5	None	-	-	300	Derailed engine truck due to ice and snow on track.
(145)	3-20	Grouse	L-b	X-4332-W	71	15	None	-	-	350	Front end of left main rod broke due to flaw and knocked out left front cylinder head engine 4332.
(146)	4-2	Pluto	L-b	X-4373-W	54	40	None	-	-	370	Left back side rod failed engine 4373 due to flaw.
(147)	4-11	Reno	L-b	24	21	5	None	-	-	300	Left main rod strap broke on engine 2339 due to flaw.
(148)	4-17	Icarus	L-b	X-4328-W	92	10	None	-	-	249	Right intermediate side rod failed on engine 4328 due to flaw.
(149)	4-18	Ryndon	L-b	X-4329-W	105	20	None	-	-	493	Left middle connecting rod broke on engine 4329 due to flaw.
(150)	7-14	Wells	L-c	570	73	15	None	-	-	1,075	Right No. 2 axle broke off inside of driving box engine 3619. Caboose buckled when engineer made emergency application of brakes.
(151)	7-12	Imlay	M-b	X-4363-W	85	6	None	-	-	250	Damaged 1st and 2nd car behind engine while 85 cars being backed in on yard track, due to trespasser stepping on cutting lever.
(152)	8-28	Dumphy	D-d	574	101	4	None	-	-	356	Engine derailed while shoving 4 cars in on house track preparatory to picking up 1 car, due to poor condition of ties in track.
(153)	8-2	Hazen	L-b	X-3619-W	98	20	None	-	-	800	Left cross-head broke at piston fit, breaking cylinder head and bottom portion of cylinder engine 3619.
(154)	9-18	Cedar	L-b	2-576	125	10	None	-	-	300	Right main pin broke damaging cylinder and bending rods engine 4365.
(155)	10-17	Sparks	L-b	566	105	10	None	-	-	160	Right middle connecting rod broke on engine 4332, due to flaw.
(156)	10-27	Wells	L-b	4-574	103	Starting	None	-	-	160	Right middle connecting rod broke on engine 4334, due to flaw.
(157)	11-12	Cosgrave	L-b	3-574	95	25	None	-	-	250	Left main rod broke and knocked out cylinder head engine 4364 due to progressive fracture.
	1933						YEAR 1933				
(158)	1-3	Lovelock	D-g	562	99	10	None	-	-	438	Derailed engine tender and 2 cars while switching due to switch being improperly lined.
(159)	4-10	Beowawe	L-b	578	91	Starting	None	-	-	190	Right main rod broke on engine 4334 due to flaw.
(160)	5-12	Fernley	L-b	X-4332-W	111	12	None	-	-	450	Right main rod broke on engine 4332 due to progressive fracture.
(161)	7-13	Imlay	D-b	2-562	95	20	None	-	-	279	Derailed 3rd car from engine when drawbar in head car in train pulled out and fell on track.

	1932					YEAR 1932					
(144)	1-31	Valley Pass	D-e	292	85	5	None	-	-	300	Derailed engine truck due to ice and snow on track.
(145)	3-20	Grouse	L-b	X-4332-W	71	15	None	-	-	350	Front end of left main rod broke due to flaw and knocked out left front cylinder head engine 4332.
(146)	4-2	Piute	L-b	X-4373-W	54	40	None	-	-	370	Left back side rod failed engine 4373 due to flaw.
(147)	4-11	Nano	L-b	24	21	5	None	-	-	300	Left main rod strap broke on engine 2339 due to flaw.
(148)	4-17	Icarus	L-b	X-4328-W	92	10	None	-	-	249	Right intermediate side rod failed on engine 4328 due to flaw.
(149)	4-18	Ryndon	L-b	X-4329-W	105	20	None	-	-	493	Left middle connecting rod broke on engine 4329 due to flaw.
(150)	7-14	Wells	L-c	570	73	15	None	-	-	1,075	Right No. 2 axle broke off inside of driving box engine 3619. Caboose buckled when engineer made emergency application of brakes.
(151)	7-12	Imlay	M-b	X-4363-W	85	6	None	-	-	250	Damaged 1st and 2nd car behind engine while 85 cars being backed in on yard track, due to trespasser stepping on cutting lever.
(152)	8-28	Dunphy	D-d	574	101	4	None	-	-	356	Engine derailed while shoving 4 cars in on house track preparatory to picking up 1 car, due to poor condition of ties in track.
(153)	8-2	Hazen	L-b	X-3619-W	98	20	None	-	-	800	Left cross-head broke at piston fit, breaking cylinder head and bottom portion of cylinder engine 3619.
(154)	8-18	Cedar	L-b	2-576	125	10	None	-	-	300	Right main pin broke damaging cylinder and bending rods engine 4365.
(155)	10-17	Sparks	L-b	566	105	10	None	-	-	160	Right middle connecting rod broke on engine 4332, due to flaw.
(156)	10-27	Wells	L-b	4-574	103	Starting	None	-	-	160	Right middle connecting rod broke on engine 4334, due to flaw.
(157)	11-12	Cosgrave	L-b	3-574	95	25	None	-	-	250	Left main rod broke and knocked out cylinder head engine 4364 due to progressive fracture.
	1933					YEAR 1933					
(158)	1-3	Lovelock	D-g	562	99	10	None	-	-	438	Derailed engine tender and 2 cars while switching due to switch being improperly lined.
(159)	4-10	Becmaw	L-b	578	91	Starting	None	-	-	190	Right main rod broke on engine 4334 due to flaw.
(160)	5-12	Fernley	L-b	X-4332-W	111	12	None	-	-	450	Right main rod broke on engine 4332 due to progressive fracture.
(161)	7-13	Imlay	D-b	2-562	95	20	None	-	-	279	Derailed 3rd car from engine when drawbar in head car in train pulled out and fell on track.
(162)	7-31	Alason	D-b	X-3636-W	100	25	A.E.Righam	Conductor	70	437	Derailed 11th to 13th cars from engine due to bottom rod on 5th car from engine dropping down and lodging in frog. Conductor walking in body of caboose at time was thrown against cupola steps.
(163)	8-13	Carlin	M-b	570	102	5	None	-	-	500	Buckled 62nd car and damaged 87th car from engine due to undesired emergency as engineer commenced service application of brakes to stop train on yard track.
(164)	10-3	Moor	C-d	574	95	4	None	-	-	390	Helper engine backed into side of another helper engine having hold of 2 cars and caboose, due to mistaking signals and trainmen not in proper position.
(165)	10-30	Red House	D-i	1-574	111	8	None	-	-	1,049	Derailed and buckled 2nd car from engine while backing train in siding to let No. 10 depart, due to some unknown person stepping on cutting lever 62 cars from engine.
(166)	11-9	Toiyabe	M-b	1-576	111	10	None	-	-	216	Buckled 46th car from engine while train was pulling out of siding when engineer made service application of brakes, due to car being too weak to withstand ordinary train operation.
(167)	12-21	Cobre	D-[illegible]	X-3761-W	79	5	None	-	-	1,686	Derailed engine caused by condition of wheels due to sliding.

	DATE	LOCATION	I.C.C. CLASS	TRAIN NUMBER	NO. CARS IN TRAIN	SPEED M.P.H.	PERSONS INJURED: NAME	PERSONS INJURED: OCCUPATION	ESTIMATED DISABILITY (Days)	TOTAL DAMAGE	DESCRIPTION OF ACCIDENT

	1934						YEAR 1934				
(168)	5-11	Avenel	D-e	I-3733-W	111	25	#A.E.Higbee #H.L.Peterson	Conductor Brakeman	20 25	$3,000	Derailed 38th to 42nd cars from head end due to broken arch bar on the 38th car. Sudden stop injured trainmen in caboose.
(169)	5-5	Hazen	D-i	I-4343-W	95	8	None	-	-	200	Derailed 54th to 57th cars from engine due to "jack-knife" action of short pivoted draw bars on empty P.R.R. passenger refrigerator cars as train was being brought to a stop.
(170)	6-16	Wells	D-i	I-3739-W	137	5	None	-	-	800	Derailed and damaged one car due to emergency action of brakes caused by trespasser stepping on cutting lever 30 cars from head end
(171)	6-15	Montello	L-b	I-3731-W	127	8	None	-	-	185	Left front crank pin broke.
(172)	9-30	Carlin	C-4	(574 (Eng.4389	22 None	10) 10)	None	-	-	585	Light engine collided with cut of 22 cars being handled by No. 574's engine backing on main track.
(173)	9-23	Death	D-e	I-3730-W	104	6	None	-	-	168	Derailed 19th car from caboose while train was pulling out of siding due to loose wheel.
(174)	11-26	Valley Pass	M-b	I-3758-W	80	5	None	-	-	600	Buckled 68th car from head end stopping to cut out helpers caused by undesired emergency action of brakes due to water in triple of auxiliary water car.
(175)	11-26	Valley Pass	C-i	I-3758-W	80	4	None	-	-	307	Helper engine shoving rear portion of train consisting of 3 cars and caboose after helper cut out, collided with rear end of standing portion of train due to trainmen not being in proper position.
	1935						YEAR 1935				
(176)	1-4	Bliss	M-b	1-370	100	30	None	-	-	875	Damaged 90th and 91st cars from head end and broke eye out of 12th car from head end, due to branch pipe failing on 92nd car from head end.
(177)	1-21	Sparks	D-g	488	54	4	None	-	-	485	Engine and 3 cars derailed pulling into yard account defective switch due to it having been previously run through.
(178)	4-19	Sparks	M-b	I-4143-E	79	10	None	-	-	724	Buckled 62nd car from head end, account knuckle breaking on 1st car in train, due to air brakes being released at too slow rate of speed.
(179)	9-18	Icarus	L-b	I-3735-W	39	30	None	-	-	980	Right main pin broke off in wheel center.
(180)	9-21	Piute	L-b	I-4366-W	91	40	None	-	-	400	Left main pin broke.
(181)	10-23	Montello	D-g	3-692	103	5	None	-	-	250	Brakeman threw switch while car passing over it during switching move, derailed car and knocked down water column.
(182)	11-11	Ditho	D-d	566	92	5	None	-	-	2,015	Broken rail in siding while train heading in, derailed 11th to 13th cars from head end and damaged 8 other cars when emergency stop made account of derailment.
	1936						YEAR 1936				
(183)	2-28	Paquop	D-e	I-3746-W	77	30	None	-	-	667	Derailed rear trucks of 21st car from engine, due to body bolster breaking on that car when air went into emergency due to brake shoe dropping off car, then striking and uncoupling air hose.
(184)	3-27	Winnemucca	D-g	572	3	5	None	-	-	319	Two cars derailed, one of the two being partly tipped over, when movement reversed after running through switch.
(185)	4-24	Reno	D-e	I-4111-E	70	15	None	-	-	4,308	Derailed 38th to 41st cars, 39th to 41st cars being turned over on their

(173)	9-25	Death	D-e	X-3730-W	104	6	None	-	-	188	Derailed 19th car from caboose while train was pulling out of siding due to loose wheel.
(174)	11-26	Valley Pass	M-b	X-3738-W	80	3	None	-	-	600	Buckled 68th car from head end stopping to cut out defects caused by undesired emergency action of brakes due to water in triple of auxiliary water car.
(175)	11-26	Valley Pass	C-i	X-3738-W	80	4	None	-	-	309	Helper engine shoving rear portion of train consisting of 3 cars and caboose after helper cut out, collided with rear end of standing portion of train due to trainman not being in proper position.
	1936					YEAR 1936					
(176)	1-4	Bliss	M-b	1-890	100	30	None	-	-	275	Damaged 90th and 91st cars from head end and broke eye out of 12th car from head end, due to branch pipe falling on 92nd car from head end.
(177)	1-21	Sparks	D-g	488	54	4	None	-	-	485	Engine and 3 cars derailed pulling into yard account defective switch due to it having been previously run through.
(178)	4-19	Sparks	M-b	X-4145-E	79	10	None	-	-	734	Buckled 62nd car from head end, account knuckle breaking on 1st car in train, due to air brakes being released at too slow rate of speed.
(179)	9-18	Icarus	L-b	X-3738-W	39	30	None	-	-	980	Right main pin broke off in wheel center.
(180)	9-21	Piute	L-b	X-4366-W	91	40	None	-	-	400	Left main pin broke.
(181)	10-23	Montello	D-g	3-892	103	5	None	-	-	250	Brakeman threw switch while car passing over it during switching move, derailed car and knocked down water column.
(182)	11-11	Ditho	B-d	566	92	5	None	-	-	2,015	Broken rail in siding while train heading in, derailed 11th to 13th cars from head end and damaged 8 other cars when emergency stop made account of derailment.
	1936					YEAR 1936					
(183)	2-28	Pequop	D-e	X-3746-W	77	30	None	-	-	667	Derailed rear trucks of 21st car from engine, due to body bolster breaking on that car when air went into emergency due to brake shoe dropping off car, then striking and uncoupling air hose.
(184)	3-27	Winnemucca	D-g	572	3	5	None	-	-	319	Two cars derailed, one of the two being partly tipped over, when movement reversed after running through switch.
(185)	4-24	Reno	D-e	X-4111-E	90	15	None	-	-	4,308	Derailed 38th to 41st cars, 39th to 41st cars being turned over on their sides when journal broke on 38th car from engine due to overheating and derailed wheels contacted planking in street crossing.
(186)	5-6	Reno	C-h	488	53	4	None	-	-	225	Cut of 19 cars being coupled to train struck rear portion of train with sufficient force to damage 15th car back from engine, due to failure of engineer to act on signals of trainmen.
(187)	5-21	Hallock	M-b	X-3830-W	12	12	None	-	-	200	Train order semaphore knocked down by boom of hoist on car which swung around due to boom not being secured and leaky throttle on hoist.
(188)	6-26	Huxley	M-b	560	99	10	None	-	-	228	Journal on 74th car from engine broke due to overheating.
(189)	7-16	Valley Pass	D-j	X-3696-W	96	15	None	-	-	299	Derailed caboose when lead wheels of forward truck climbed guard rail, caboose sluing cross-wise of track and helper engine shoving against it.
(190)	7-25	Mina	C-h	605	4	5	None	-	-	260	Damaged three cars in 10 car cut when four cars being dropped struck the cut, due to conductor lining wrong switch.
(191)	8-5	Red House	L-b	578	95	35	None	-	-	250	Right main rod on engine broke due to progressive flaw.
(192)	8-6	Granite Point	D-e	3-848	91	40	ϕE.G.Baker	Brakeman	11	36,284	Journal broke on 31st car from engine due to overheating, car derailing and tearing out switch, causing derailment of following 27 cars, 10 being turned over and 2 tipped on edge, brakeman in cupola of caboose being injured.

ϕ - Caused from sudden stopping, starting, lurch or jerk of car or train

	1938										
							YEAR 1938 (Continued)				
(219)	7-2	Anthony	L-b	1-574	103	25	None	-	-	$ 885	Right No. 2 crank pin of engine broke due to progressive fracture.
(220)	8-29	Mina	D-i	605	11	30	None	-	-	710	Lead wheels of lead truck of 3rd car derailed due to slight irregularities in track and car down on side bearings, the car running 3,000 feet on ground before train stopped.
(221)	9-6	Fernley	L-e	605	4	5	None	-	-	230	Main driving axle of engine broke due to progressive fracture.
(222)	10-10	Cosgrave	D-c	X-3751-W	79	40	None	-	-	1,623	Derailed 56th and 57th cars behind engine, due to arch bar column bolt breaking, strap of arch bar truck engaging diverging rail to siding, causing derailment.
(223)	10-12	Beowawe	M-b	X-3730-W	85	15	None	-	-	275	Train struck motor cars and trailers on track, due to engineer's failure to properly respect flag protection.
(224)	10-21	Red House	M-b	3-574	103	4	None	-	-	173	Coupler pulled out of the 78th car from engine by heavy run out of slack due to improper handling of air by engineer while backing up at slow speed.
(225)	11-19	Reno	M-b	X-4165-W	85	12	#C.E.Goeble	Conductor	286	278	Train stopped suddenly when due to heavy service application made to avoid striking automobile foul of track, conductor and brakemen, all of whom were riding in caboose, being injured.
							#J.E.Page	Brakeman	109		
							#D.B.Woolverton	Brakeman	81		
							#J.C.Hooker	Brakeman	58		
							#J.C.Padoven	Brakeman	51		
(226)	12-11	Golconda	L-b	576	91	30	None	-	-	384	Nut on left piston rod failed due to stripped thread caused by water in cylinder.
	1939										
							YEAR 1939				
(227)	1-5	Montello	M-b	X-3708-W	88	20	None	-	-	187	Undesired emergency as train was stopping caused end to be pulled out of 39th car from engine and broken knuckle on first and fifth cars from engine.
(228)	2-1	Lovelock	D-i	X-3751-E	90	8	None	-	-	697	Second car from engine buckled and derailed by emergency stop due to knuckle pin raising on 56th car from engine separating train while train was backing in on siding.
(229)	2-7	Ditho	L-b	X-3693-W	79	35	None	-	-	168	Left side rod collar on engine broke due to progressive fracture.
(230)	7-19	Ocala	D-c	556	88	40	None	-	-	2,193	Derailed 83rd, 84th and 85th cars from engine account of axle breaking on 83rd car due to progressive fracture.
(231)	8-31	Kampos	D-g	1-578	42	4-6	None	-	-	200	Two cars of cut being backed in on spur track were backed off end of track.
(232)	12-8	Halleck	L-b	X-3688-W	100	35	None	-	-	265	Eccentric crank arm trunnion, left main pin, of engine broke, due to progressive fracture.

- Caused from sudden stopping, starting, lurch or jerk of car or train.

54 INSTRUCTIONS

1. The report shall be rendered for all crews and train service, including yard crews, helper crews, wreck crews, dead head crews, work train crews, and all others, whether paid by the hour, day, week, month or mileage basis. The report shall be rendered by the conductor for the crew and by the engineman for the engine crew and by the fireman or assistant if and if employed, and by the flagman or brakeman if and if employed, for each assigned service performed by each.

2. The report shall be dated as of the date on which the employee goes on duty.

3. Under "Remarks" shall be shown any explanation of the items of delay. If any employee is detained from duty for any period between the time he is relieved from duty and the time specified in the call for the next service, the time of such detention shall also be shown under "Remarks," giving the time at which the relief is given, the time at which the call was issued, and the time at which it was received. Time of delay to crews in transfer service, and crews and engines in wreck service, shall also be shown. Time of delay to any part of a train or engine by reason of the failure of any part of the train or engine, or by reason of the loading or unloading of the train, shall be shown, stating the cause of the delay, the name of the employee responsible for the delay, or the name of the employee reporting the delay.

4. Whenever time is shown A. M. or P. M. shall be given.

5. In reporting delays the names of each delay or the time each is terminated, the name of a train shall be given. Delays due to different causes shall be shown separately.

6. All delays to passenger trains shall be shown, on the regular basis of ten minutes or more, on each engine and on the caboose. Delays to yard and switching crews shall be shown.

7. When any delay is claimed against the Company, the employee shall give to the Division Superintendent or his representative, at the time of the delay, a written statement of the cause of the delay.

8. If any employee is relieved for any reason from duty at a point other than his home terminal, he shall report to the Division Superintendent or his representative at the point where relieved.

While descending the Iris Hill, to control speed of train engineer placed automatice brake valve in lap position for a few seconds and just as he started to make a service application, brakes suddenly went into and undesired emergency, causing a sudden and abrupt stop on the rear end, resulting in Brakeman Hausman, who was seated on bench on south side of caboose,

b ng thrown against the desk and to floor, sustaining injuries shown. As no report of the undesired action was made on arrival of train at Indio, no examination of train was made to locate cause.

INSTRUCTIONS REGARDING ENTRIES ON FACE OF THIS SHEET

(References are to sections of the Commission's Rules governing Monthly Reports of Railway Accidents, 1922 Revision)

1. The significant words in the name of the reporting carrier should be given in full, so far as practicable.

2 and 3. Concerning train accidents occurring on terminal or other track operated jointly or in common, or classifiable as crossing collisions, see, respectively, sections 5, 5a, and 5b, and 8 (*e*) and (*f*) of Rules.

4. Enter the number of the accident as recorded in the carrier's operating records.

5. Enter the name of the operating division on which the accident occurred.

6. State the day of the month.

7. State the time o'clock in hours and minutes, a.m. or p.m.

8. Enter a capital letter to indicate the class (see section 20 of the Rules) and a small letter to indicate the subclass (see sections 8 to 13).

9. The customary abbreviation for the name of a State may be used.

10. Give the name of the station nearest to the place where the accident occurred (or was first discovered) and indicate whether it occurred on main track, or on yard track or sidings. This information should be given both for train accidents and train-service accidents. Main tracks within yards are not to be regarded as yard tracks. Sidings not used exclusively as passing tracks are to be regarded as yards. See section 25 of Rules.

11. The giving of the number of the milepost nearest to the place of the accident is optional; and instead of giving it in the case of either a train or a train-service accident, if the accident occurred at a station, that fact should be stated, or, if it occurred within a yard, the name or description of the yard should be given.

12. Distance, estimated in miles or rods, should be given when appropriate.

18. Show the kind of train, as freight, passenger, work, switching, etc. If light engine, state to what class of service assigned. See section 26 of Rules.

20. Give the time-table direction.

21. Give the estimated speed in miles per hour.

22. In case of a collision, show whether trains were operated under a block system at point of accident, stating specifically what method of blocking, if any, was employed.

23. Give number of main tracks in use in locality of accident.

24. (*b*) See section 31 of Rules.

1. The significant words in the name of the reporting carrier should be given in full, so far as practicable.

2 and 3. Concerning train accidents occurring on terminal or other track operated jointly or in common, or classifiable as crossing collisions, see, respectively, sections 5, 5*a*, and 5*b*, and 8 (*e*) and (*f*) of Rules.

4. Enter the number of the accident as recorded in the carrier's operating records.

5. Enter the name of the operating division on which the accident occurred.

6. State the day of the month.

7. State the time o'clock in hours and minutes, a.m. or p.m.

8. Enter a capital letter to indicate the class (see section 20 of the Rules) and a small letter to indicate the subclass (see sections 8 to 13).

9. The customary abbreviation for the name of a State may be used.

10. Give the name of the station nearest to the place where the accident occurred (or was first discovered) and indicate whether it occurred on main track, or on yard track or sidings. This information should be given both for train accidents and train-service accidents. Main tracks within yards are not to be regarded as yard tracks. Sidings not used exclusively as passing tracks are to be regarded as yards. See section 25 of Rules.

11. The giving of the number of the milepost nearest to the place of the accident is optional; and instead of giving it in the case of either a train or a train-service accident, if the accident occurred at a station, that fact should be stated, or, if it occurred within a yard, the name or description of the yard should be given.

12. Distance, estimated in miles or rods, should be given when appropriate.

18. Show the kind of train, as freight, passenger, work, switching, etc. If light engine, state to what class of service assigned. See section 26 of Rules.

20. Give the time-table direction.

21. Give the estimated speed in miles per hour.

22. In case of a collision, show whether trains were operated under a block system at point of accident, stating specifically what method of blocking, if any, was employed.

23. Give number of main tracks in use in locality of accident.

24. (*b*) See section 31 of Rules.

24. (*c*). See section 30 of Rules.

25. State the amount of damage to equipment (including damage to foreign cars), to other railway property, and cost of clearing wreck, with the total amount as provided. In case of a "joint-operation" accident, figures for the several items should be given for *each road involved*, the name of which should be clearly indicated. If no other road is involved, respondent may make the requisite entries on "Total" line only. See section 29 of Rules.

26. For information in general pertinent to the matter of returns, see sections 1 to 13, 17, 20, and 22 to 31 of Rules. If the space afforded on Form T is insufficient for *all* the requisite entries concerning a particular accident, blank sheets of like size, suitably identified and completed, may be attached to a single Form T containing the introductory details applicable to the accident as a whole.

Brakeman, while seated on locker seat at desk in caboose, claims he was thrown off balance by slack action, striking his side against aboose desk. There was no unusual handling of train, no defects in equipment, and accident was due to failure of brakeman to properly protect himself while riding over district with which he was thoroughly familiar.

(With regard to collisions involving any question of train orders, it should be stated whether a "19" order or a "31" order was used.)

Train consisted of 122 empties, and engineer made a kick-off, prior to making service application preparatory to making final stop in Yard, and as he moved brake handle over, got only a short preliminary exhaust, train brakes going into undesired emergency, causing a rough stop on rear of train as slack ran in, throwing Condr Klaus, rear Brakeman Hausman and swing Brakeman J. A. Sutton down in caboose, resulting above injuries to Klaus and Hausman; Sutton sustained slight injury to right knee and back of head, and was not incapacitated.

(SEE INSTRUCTIONS ON REVERSE OF SHEET)

INSTRUCTIONS REGARDING ENTRIES ON FACE OF THIS SHEET

This Report Must Be Rendered Monthly to the ARIZONA CORPORATION COMMISSION, Phoenix, Arizona.
Accidents resulting in loss of life must be reported by telegraph, at the earliest possible moment.

1. The significant words in the name of the reporting carrier should be given in full, so far as practicable.

2 and 3. Concerning train accidents occuring on terminal or other track operated jointly or in common, or classifiable as crossing collisions, give full details as to rseponsibility.

4. Enter the number of the accident as recorded in the carrier's operating records.

5. Enter the name of the operating division on which the accident occurred.

6. State the day of the month.

7. State the time o'clock in hours and minutes, a.m. or p.m.

8. Enter a capital letter to indicate the class and a small letter to indicate the subclass.

10. Give the name of the station nearest to the place where the accident occurred (or was first discovered) and indicate whether it occurred on main track, or on yard track or sidings. This information should be given both for train accidents and train-service accidents. Main tracks within yards are not to be regarded as yard tracks. Sidings not used exclusively as passing tracks are to be regarded as yards.

11. The giving of the number of the milepost nearest to the place of the accident is optional; and instead of giving it in the case of either a train or a train-service accident, if the accident occurred at a station, that fact should be stated, or, if it occurred within a yard, the name or description of the yard should be given.

12. Distance, estimated in miles or rods, should be given when appropriate.

18. Show the kind of train, as freight, passenger, mixed, special, official, pay, work, switching, etc. If light engine, state to what class of service assigned.

20. Give the time-table direction.

21. Give the estimated speed in miles per hour.

22. In case of a collision, show whether trains were operated under a block system at point of accident, stating specifically what method of blocking, if any, was employed.

23. Give number of main tracks in use in locality of accident.

25. State the amount of damage to equipment (including damage to foreign cars), to other railway property, and cost of clearing wreck, with the total amount as provided. In case of a "joint-operation" accident, figures for the several items should be given for each road involved, the name of which should be clearly indicated. If no other road is involved, respondent may make the requisite entries on "Total" line only.

26. If the space afforded on this form is insufficient for all the requisite entries concerning a particular accident, blank sheets of like size, suitably identified and completed, may be attached to a single Form 195 containing the introductory details applicable to the accident as a whole.

PLAINTIFF'S EXHIBIT NO. 327

Admitted and Filed Apr. 16, 1941

Excerpts from a Volume Entitled "Santa Fe—Instructions for Operating and Maintaining Air Brake Apparatus (Form 2501 Standard)

Brake Sticking (Page 12)

As a general rule the cause for brakes sticking is due to the failure to raise the brake pipe pressure quickly above the auxiliary reservoir pressure, which must be done in order to move the triple valve parts to release position.

It is more difficult to release the brakes on a long than on a short train, and there is a difference between triple valves that stick and fail to release, and those that release with the others and reapply, or those that creep on when the brakes are not being used. The first mentioned may be due to failure to raise the brake pipe pressure promptly, or an individual triple valve having a bad packing ring; the second mentioned (which is most likely to occur on the

head end) can be due to a slight overcharge; while the third mentioned (the creeper) can only be caused by an erratic working feed valve, a closed angle cock, or the engineman moving brake valve to release and back to running position after train is charged; and with a little study of the operation of the equipment, if the experience of every day practice is made use of, much of the trouble can be anticipated and prevented.

Enginemen, Trainmen and Inspectors (Page 16)

The difference in grade over which the train may be passing when the brakes are applied—for example, one portion of the train may be on an ascending grade, when the grade would assist the brake in stopping the cars; and another portion of the train may be on a descending grade, in which case the grade would oppose the effort of the brake to stop the cars. Such a condition requires care and judgment on the part of the engineman as regards the time and manner of operating the brake to prevent as far as possible severe shocks and strains due to the action of the slack in the train.

[fol. 5928] Sheet 2 of 8 sheets

Enginemen, Trainmen and Inspectors (Page 16)

While the loss in shoe friction, or holding power, is a serious item when the speed is raised considerably, the increased work the brake will have to do to stop a car on account of the increased speed is not generally appreciated. To illustrate the latter, with all else the same if the speed of a car was increased from 10 miles per hour to 20 miles per hour the brake would have to do four times as much work to stop it. At 30 as compared with 10 miles per hour the work would be nine times as great; while at 40 as compared with 10 miles per hour the work would be sixteen times as great.

This is due entirely to the loss of friction between the shoe and wheel caused by the increase in speed.

The brake safety of a train is measured by the distance that would be required for making an unexpected stop, and the distance required will be more on a descending grade and less on an ascending grade than on the level. Dividing

the total train tonnage by the number of good brakes will give the number of tons each brake will have to control or stop.

Shocks from Application and Release (Page 17)

Shocks are caused by the difference in holding power and speed throughout the train and to consequent running of the slack. The longer the train the greater may these differences become. If the brakes are applied while the slack is stretched it will run toward the engine and the lower the speed and the heavier the application, the greater will be the shock, while if the brakes are released on a moving train the slack will run out unless some means is at hand for preventing it (see "ET Equipment" and "K Triple Valve") and will result in pulling strains on the draft gear which will be aggravated by low speed and heavy brake pipe reduction. Parts of the train being on different grades at the same time, and car loading are among the causes for one portion of the train slowing down more rapidly than another. These are conditions that have to be met, and enginemen and trainmen are expected to understand them and exercise such judgment as will prevent damaging shocks.

Train Handling (Pages 28-30)

Excess Pressure and Releasing Brakes

Excess pressure is the amount in pounds in the main res-

[fol. 5929] Sheet 3 of 8 sheets

ervoir over that in the brake pipe and auxiliary reservoirs and is required to charge and release brakes. It is indicated with brakes off or on by the difference between the two hands of the gage, provided, if brakes are applied, the brake pipe reduction does not exceed that necessary to fully apply any one or more brakes. The amount to be carried in any service will be determined by those in authority.

It follows from the foregoing that the nearer brakes are applied to full service application the more promptly will they commence to release. Also that as a light reduction results in less excess, it is more liable to be followed by brakes failing to release. Where made from standard pressure it is also likely to be followed by overcharging in the attempt to insure release. This becomes more pronounced

the longer the train. Therefore, it is undesirable as a general rule to attempt to release following a light reduction from standard pressure.

Should a light reduction be necessary to accomplish the desired results, increase it before attempting to release if the conditions will permit.

The proper length of time to leave the brake valve in release to effect a release of all brakes, and yet avoid overcharging, depends to such an extent on the conditions just explained, the length of the brake pipe and on the main reservoir volume and whether full or partial release is used, that no fixed rule can be established. Tests have demonstrated that following a full service application with a 50 car train it often takes from 6 to 10 seconds for the release wave of air to pass from the engineer's valve to the rear car.

The most common fault by far is in not leaving the brake valve handle in release position long enough. Another one is moving it back and forth between release and running position several times, this breaking up the strong flow of air and preventing the quick and considerable rise in pressure desired at the rear end, remembering that a quick raise in pressure insures more positive release than does a slow raise even if heavy. The right way is to move the handle to release, leave it there the proper length of time, then return it to running position. With very long trains it is best within 8 to 12 seconds to move to full release and back at once to running position, in order to "kick off" any head brakes which released with the others but slightly overcharged and then reapplied. Do not practice returning to release again when the signal is given to start or when approaching a hard pull as this results in overcharging and is very liable to be followed by brakes sticking.

Excess Pressure and Releasing Brakes

To release the brakes on a train of 50 cars or more the brake valve handle should ordinarily be left in full release for about 15 seconds, assuming a reasonable amount of excess pressure is available. With the information given and a knowledge of the conditions surrounding each case, it re-

quires merely the exercise of judgment on the part of the engineer to insure a prompt release and avoid overcharging. The time for releasing as given does not cover recharging.

To release the brakes upon any train, it is absolutely necessary that the brake pipe pressure be raised promptly in order to insure releasing brakes. Any method of braking that does not provide for a prompt rise of brake pipe pressure upon releasing should be discouraged; because a slow increase in brake pipe pressure will not release many brakes and if a stop is not to be made at the time of release some brakes will be left applied, contributing to overheated, cracked, broken and slid flat wheels.

Where high speeds are maintained with brakes applied, the wheel heat is generated faster than it can be radiated and the wheel heat increases until it is abnormal. When brakes are held applied for long distances, the brakes that are holding well are called upon to do the braking, and it might be possible that the pressure on the good brakes is gradually increased without making the other brakes effective if the brake pipe pressure is raised slowly and increased only a few pounds and then reduced without recharging. Continuing this operation for long distances will cause the wheels on some cars to be overheated, while other cars in the train will have the wheels cold or nearly so. The conditions are the same as would be the case if several brakes failed to release and the train was operated for a considerable distance at normal speed.

In handling trains, where brakes are used for controlling the speed, the main consideration is to maintain such a speed and sufficient pressure throughout the brake system to provide for stopping in a reasonable distance. The method of braking to provide this condition must be such that the majority of brakes in any train shall be made to do their share of braking.

When operating on light grades where braking is necessary, particularly when retaining valves are not used, care must be exercised to build up the braking power in light steps by making as light brake pipe reductions as are practical for train, grade and speed conditions, adding subsequent reductions within a few seconds following the initial reduction to make the brake application as heavy as possible without exceeding a full service application by the time a release is necessary or desirable.

Train Handling (Page 29)

Excess Pressure and Releasing Brakes

The nearer brakes are applied to full service and the quicker the application is brought about the less trouble will be experienced with brakes sticking.

The brakes should be applied gradually enough to provide for the elimination of slack action, avoiding holding on to light applications for long periods. When the brakes are applied lightly and held so there is opportunity for the brake cylinder pressure to equalize with the brake pipe pressure if any leakage exists past the emergency valve or check case gasket in the triple valve. On the other hand if the brake application is continued until the brake pipe and brake cylinder pressure equalize, and the rate of application is at the same or a greater rate than is brought about by leakage through the triple valve, the brake cylinder and auxiliary reservoir pressure will be lower, which will lessen the difficulty of releasing brakes and offset the tendency for some brakes to develop excessive brake cylinder pressure.

When the brake applications are prolonged from light reductions the brakes having full pressures develop wheel heat at a much greater rate than others which contribute to cracked plates and broken wheels.

With a 50 car train a full service application will, unless a good portion of the train is equipped with K triple valves, cause the pressure near the head end of the brake pipe to reduce about 5 pounds faster than that at the rear end. This results in the head brakes applying in advance of the rear ones, which tends to bunch the train and compress the coupler springs. In releasing with a train of this length the head brakes commence so much before those at the rear that they are practically off, so far as holding power is concerned, before the rear ones start to release, this causing the slack to run out rapidly. How serious the results may be is largely dependent on how heavily the brakes were applied, the amount the coupler springs were compressed and how slow the train is moving. The latter is very important because of the rapid increase in holding power at low speed. At low speed it is almost sure to

break the train in two unless there is retained at the head end some powerful holding power, such as is possible with straight air, or the holding feature of the ET equipment acting on the driver and tender brakes, or unless a sufficient number of K triple valves are present at the head end of the train so their retarded release feature can prevent the running out of slack.

[fol. 5932] Sheet 6 of 8 sheets

Service Braking (Page 31)

The critical time in regard to train damage from brake applications is while the slack is running in or out, as trains are seldom pulled in two, or buckled, from steady pulling or pushing strains; therefore if the slack can be kept stretched or bunched the liability of train damage from brake operations will be greatly reduced. This condition is most nearly obtained by applying the brakes far enough away to complete the stop without making a heavy brake pipe reduction, it will not require as heavy reduction to move the triple valves from lap to service on the second or any succeeding reduction as it would to move them from release to service with the first reduction.

A method that may be used to advantage is to keep the slack stretched by making the initial reduction before shutting off steam, then shut off steam gradually, the object in working steam being to prevent the slack running in as the brake application is made, which in turn will prevent severe jerks due to slack running out as the rear brakes become effective. It is undesireable to make heavy initial reductions at low speed. The objection is mainly due to the high brake shoe friction at low speed, and to the more rapid application of the head than the rear brakes, which latter occurs under all conditions with long trains but is less if the train is equipped with K triples.

(Page 32)

Draft rigging in fair to good condition is not pushed in nor pulled out. It is either driven in or jerked out, both implying a severe blow. The severity cannot be judged by any shock felt by those riding trains, particularly the engineer of a heavy locomotive. For a shock to be felt the speed must change suddenly and considerably. The amount of the instant reduction in speed or jerk of a modern freight locomotive that is necessary to cause a break-in-two is too

little to be felt as the severe shock that it is to draft rigging.

The secret of smooth train handling lies in ability to control the slack, in how to prevent it from running in or out harshly. Where so controlled no draft gear in fair to good condition will be damaged. Slack action cannot be prevented, but by enginemen acquiring knowledge of the various causes for it and exercising forethought in the use of steam, train brakes, independent engine brakes and sand, it can generally be controlled, even to the extent of avoiding further injury to damaged draft gear. The heavier the locomotive and the longer the train the greater is the care required. In train handling harsh running out of slack is the usual trouble.

[fol. 5933] Sheet 7 of 8 sheets

Instructions for Enginemen (Page 33)

Where a long train has just been started, and while the engine is working heavily, if steam is shut off suddenly and a heavy service application is made at once there is liability of driving in couplers or damaging weak cars near or ahead of the middle of the train.

When slack runs in or out rapidly one part of the train gradually attains a lower speed than the other and the shock is the result of the draft rigging having to suddenly make the speed uniform on the instant the slack is all in or out. How heavy the shock will be depends mainly on the difference in speed that must instantly be made uniform and on the weight that must suddenly be altered in speed. Weight is important, but change in speed is more so as changing it suddenly 3 m.p.h. will cause nine times more shock than will a similar quick change of 1 m.p.h.

Charging and Testing (Page 35)

Do not assume that the presence of "K" triple valves will permit of releasing long trains at low speeds. Also, do not assume that the holding power that can be retained on the engine will alone permit of this. It is a help, but has its limitations.

Short Cycle Method of Grade Braking (Page 43)

This method of braking will have to be employed when controlling trains with air alone on descending grades,

because it is the only method by which the auxiliaries can be kept charged as near the maximum as possible, the braking power and wheel heat be most uniformly distributed and developed, and most uniform speed maintained. While the short cycle method is easy to master, it differs radically from the methods practiced by enginemen who have learned mountain grade braking with hand brake assistance, the principal difference being more frequent brake applications and short holds.

Engineman's Brake Practice (Page 44)

No fixed rule can be made to cover the amount of reduction that should be made during each application, as different trains hold differently, but the engineman can determine by the result of the first few applications about how much brake power will be required to produce the desired result. Speaking generally the brakes should be [fol. 5934] applied each time the auxiliaries are recharged,

Sheet 8 of 8 sheets

Engineman's Brake Practice (Page 44)

and released as soon as the speed begins to reduce from the effect of the brake application. Where at all possible the interval between applications should not exceed 1 to 1¼ minutes, and this time should be divided as follows: 20 to 30 seconds applying and holding the brakes on, 20 to 25 seconds in release position, then move the brake valve to running position to allow the pressure to equalize throughout the train and in about 10 or 15 seconds again place the brake valve in release for a few seconds to "kick off" any triples that may have reapplied from overcharge; allow a few seconds for such triples to exhaust the brake cylinder pressure down to the value of the retainer, and make the next application. While the above will have to be varied for different trains, it will serve for a general idea of the short cycle method, and if the train is handling well no very great departure from the method suggested above will be necessary.

Overheated and Sliding Wheels. (Page 45)

While trains are in motion on descending grades trainmen must watch the wheels for signs of overheating or

sliding. If either is noticed, the retainer should be turned down—provided, however, that not more than two retainers are turned down in the portion of a train under the care of each trainman.

Trainmen should watch particularly for wheel sliding at low speed, and when starting the train from any stop while the retainers are turned up.

[fol. 5935] PLAINTIFF'S EXHIBIT No. 328

Admitted and Filed Apr. 16, 1941

Sheet 1 of 6 sheets

Excerpts from a Volume Entitled "Southern Pacific Company (Pacific Lines)—Air Brake Rules and Regulations —Governing Train Handling, Operation and Tests of Air Brake and Air Signal Apparatus—Effective February 1, 1939"

Train Handling Regulations (Page 8-9)

Smooth train handling depends on the ability to control the slack and how to prevent it from running in or out harshly. Where so controlled, no draft gear in fair to good condition will be damaged. Slack action cannot be prevented, but by acquiring knowledge of the various causes for it, and exercising forethought in the use of steam, train brakes, independent engine brake and sand, it can be controlled, even to the extent of avoiding further injury to damaged draft gear. The heavier the engine and the longer the train the greater is the care required.

When slack runs in or out one part of the train gradually attains a lower speed than the other and the shock is the result of draft gears having suddenly to make the speed uniform on the instant slack is all in or out. How heavy the shock will be depends mainly on the difference in speed that must instantly be made uniform and on the weight that must suddenly be altered in speed.

Excess pressure is the amount in pounds in the main reservoir over that in the brake pipe and auxiliary reservoirs and is required to charge brake system and release brakes. It is indicated by the difference between the hands on the air gage.

The nearer brakes are applied to full service, the more promptly will they commence to release. A light brake pipe

reduction results in less excess, and is more liable to be followed by brakes failing to release. Where made from standard pressure, a light reduction is also likely to be followed by overcharging in the attempt to insure release, and is more pronounced with longer trains.

With high pressures and large main reservoirs it is very easy to overcharge the head end of the train; many detrimen-

[fol. 5936] Sheet 2 of 6 sheets

Train Handling Regulations

(Page 9)

tal effects result, such as stuck brakes, flat and broken wheels. Many are of the impression that because the brake pipe gage shows higher than the auxiliary reservoir pressure is intended to be, that all brakes are released; as a matter of fact, this is a condition that exists only on the first few cars in the train, the pressure at the rear not having sufficiently increased to release the brakes. In fact, 25 cars back from the engine it cannot be determined whether the brake valve handle is in release or running position. With a large capacity feed valve the brake valve handle should be held in release position not to exceed 25 seconds when releasing brakes only is the object. The exceptions to this rule are when charging the brake system and braking on grades under all conditions.

(Page 10).

Where high speeds are maintained with brakes applied, the wheel heat is generated faster than it can be radiated and increases until it is abnormal. When brakes are held applied for long distances, those that are holding well are called upon to do the braking and it might be possible that the brake cylinder pressure on such cars is gradually increased without making the other brakes effective if the brake pipe pressure is slowly raised and increased only a few pounds, and then reduced without recharging. Continuing this operation will cause the wheels on some cars to be overheated, while on others they will remain cold or nearly so.

(Page 11)

Where the brakes are used for controlling speed for short distances, the main consideration is to maintain a safe speed and ample pressure throughout the brake system for

stopping in a reasonable distance. The method of braking to provide this condition must be such that the majority of brakes shall be made to do their share of braking. When brake applications are prolonged from light reductions, the brakes having greater pressures develop wheel heat at a much faster rate than others, thus contributing to cracked plates and broken wheels.

An automatic brake application will cause the brake pipe pressure to reduce faster at the head end of train than at rear. This results in the head brakes applying in advance of those at the rear, and tends to bunch the train and compress the draft gears. In releasing, the head brakes commence so much before those at the rear that, as far as holding power is concerned, they are practically off before the rear ones start to release, causing the slack to run out rapidly. Just how serious the results may be largely depends on how heavily they are applied, the amount the draft gears are compressed, and how slowly the train is

[fol. 5937] Sheet 3 of 6 sheets

Train Handling Regulations

(Pages 11-12)

moving. The latter is very important because the rapid increase in holding power at low speed, which is almost sure to break the train in two unless there is retained at the head end some powerful brake, such as retaining valves or independent brake on the engine.

The engine brake may be used to good advantage if the time necessary to gently run the slack in or out is used. This is also true when switching.

When retaining valves are used, it is practicable to release at somewhat lower speeds than when not used. While the head brakes always start to release before those at the rear, the retaining valves cause a much slower fall of brake cylinder pressure, the result being that slack runs out more gradually.

Draft gears in fair to good condition are not pushed in nor pulled out. They are either driven in or jerked out, both implying a severe shock. The severity cannot always be judged by enginemen, particularly if on a heavy engine. For a shock to be felt the speed must be changed suddenly and considerably. The amount of the instant reduction in

speed or jerk of a large engine that is necessary to cause a break-in-two is too little to be felt.

The critical time in regard to train damage from brake applications is while the slack is running in or out, as trains are not pulled in two, or buckled from steady pulling or pushing strains; therefore, if the slack can be kept stretched or bunched, the liability of train damage from brake valve manipulation will be greatly reduced. This condition is most nearly obtained by applying the train brakes far enough away to complete the stop without making a heavy reduction.

A method that may be used to advantage is to keep the slack stretched by making a light initial reduction, then closing throttle to a drifting position and keeping engine brake released. The object in working steam is to keep the slack from running in as the brake application is made, thus preventing severe jerks due to slack running out as the rear brakes become effective. It is undesirable to make a heavy initial reduction at low speed, due to the high brake shoe friction and to the more rapid application of the head brakes than those at the rear.

When make-up of train or grade conditions are such that

they would have a tendency to bunch the slack, the brakes should be operated with slack bunched. When such tendency would be to stretch the slack, the brakes should be operated with the slack stretched.

At how low speeds brakes can be released without liability of damage depends on how heavily they are applied, the amount of main reservoir pressure, the length of train, whether slack is in or out, lightly or heavily, and on whether track conditions (sags, humps, and curves) favor releasing. Engineers must exercise judgment in this, but taking all chances on the side of stopping.

Some of the most important facts relating to heavy grade braking may be summed up as follows:

(1) The brake work required for a stop increases much more rapidly than the speed.

(2) On level track the braking power is available fo stopping.

(3) On a descending grade a certain portion of th braking power is required to prevent an increase i speed.

(4) On a descending grade the work required of eac brake to maintain uniform speed increases wit the weight of the load per operative brake.

(5) The braking power available for stopping is tha in excess of what is necessary to prevent an in crease in speed.

(6) The braking power obtained from a certain brak shoe pressure always increases as the speed re duces.

(7) The longer the distance required for a stop, th more will it be lengthened by brake cylinder leak age.

Another very important factor and one which cannot be determined by the ordinary brake test, is the condition of triple valve feed grooves. If any are considerably choked with dirt, a longer time will be required to recharge their reservoirs, the train will be more difficult to control and will require greater care. For this reason, extreme care and low speed should be observed on beginning the descent.

Where conditions are similar, the ability to obtain the maximum braking power possible is dependent on brake system being charged to standard pressure, and the proper use of same.

[fol. 5939] Sheet 5 of 9 Sheets

Train Handling Regulations (Pages 17, 18-19)

While it is desired to accomplish a given amount of work with the least possible consumption of air, train safety is of the greatest importance; therefore, the speed of compressor should not be retarded at the expense of safety.

Although a standing brake test with knowledge of M per operative brake and number of cars is necessary be

fore starting, the ability to control or stop a train must be, for the sake of safety, confirmed by the first running application after passing the summit. Speed should be kept low until this is determined and later increased accordingly.

Where conditions are not favorable speed should be reduced, or if necessary, train stopped.

When using sand for the purpose of preventing wheel sliding at or near the completion of stop, it should not be started running until after the brakes are applied, to prevent sand getting between shoes and wheels. Sand once started should be continued until the train stops or brakes are finally released. Failure to accomplish this is liable to cause rather than prevent wheel sliding, as when once sliding, sand will not start them revolving but will rapidly cause large flat spots. In case of emergency, sand should be started as soon as possible.

When starting with 2 or more engines ahead, the second engineer should allow lead engineer to start the train if possible, or to almost stall before aiding him. Starting together will cause a severe shock if any slack is in.

With one or more helper engines back in the train, helper engineers must be the first to use steam in starting. The lead engineer should be prepared to start promptly and carefully before the helpers become stalled. If train cannot be so started, lead engineer should take slack back to lead helper. Then, if necessary, rear helper engineer will take slack, and lead engineer will keep the throttle open but be prepared to ease off temporarily to prevent a lunge while starting. All slacking must be done carefully.

Slipping of drivers should be avoided, as it causes severe shocks to draft gears and damage to machinery and rails. The draft springs cause the slack to change quickly, and this is usually followed by a severe shock with the renewed use of steam. Hence, when slipping is probable, sand should be used and no more throttle than necessary. The beginning of slipping will instantly reduce the steam pressure in the cylinders, and the quick and slight closing of the throttle will at once "steady" the engine without much change of slack or loss of speed. With 2 or more engines in a train, excessive slipping of one will often cause the others to slip.

Release while Running (Page 36)

Where a light application is made, it should be increased as much as practical before attempting to release. It may be necessary at times to release after a slow-down without increasing the application, but this should be avoided as far as practicable.

Air brakes on trains of 100 or more cars must not be released until train stops, except that when all cars are equipped with "AB" brakes, they may be released at speeds above 20 miles per hour.

Air brakes on trains of 75 to 100 cars must not be released until train stops unless brakes are operated with the slack stretched and speed is not below 20 miles per hour, or all cars are equipped with "AB" brakes and speed is not below 15 miles per hour.

Air brakes on trains of 50 to 75 cars must not be released at any speed below 15 miles per hour.

When retaining valves are used on trains of any length, air brakes may be released at any speed above 8 miles per hour.

After brakes are released, while running, additional steam must not be used until it is known that the slack has had time to adjust itself, and even then it must gradually be increased.

(Page 39)

The required number must be turned up solid on head end of train before beginning descent and left until train has descended the grade, except that retaining valves must be turned down on cars having overheated wheels, and an equal number turned up on other cars.

MONTHLY REPORT OF RAILWAY ACCIDENTS

FORM No. 320

ARIZONA CORPORATION COMMISSION

SHEET No. 28

Name of reporting Carrier (1) The Atchinson, Topeka & Santa Fe Ry. Co. Coast Lines — For the month of July, 1939

If "joint operation," or crossing collision, name roads involved (2) —

If "joint operation," name road whose Superintendent is in charge of track (3) —

Carrier's number (4) 84415 — Carrier's division (5) Alburquerque — Date of accident (6) 27th — Time of day (7) 8:17 PM — ICC Class (8) D-5

Place of accident (9) Arizona — Nearest station (10) Coconino — Nearest milepost (11) 57 — Estimated distance and direction from station named (12) .51 Mi east

Kind of accident (13) Derailment — Clear, cloudy or foggy? (14) Clear — Raining or snowing? (15) No. — Daylight or dark? (16) Dark

Cause (briefly) (17) Excessive speed on curve, resulting in derailment two engines and four passanger cars.

Kind of train (18) Passenger — Train No. (18A) Over flow extra — Number of cars in train (18B) 13 — Engine Nos. (19) 3853 3704 — Direction (20) West — Speed (21) 35 to 40 m. p. h.

(22) Method of operation —

(Answers to questions 21 and 22 required only in connection with collisions.) (23) Number of main tracks —

(24) DETAILS OF CASUALTIES TO PERSONS

Name and address of person	Class of person	Killed or nature and extent of injuries	Days disability. (If killed, so state) Actual (d)	Probable (e)
(See Attached List)				

(25) COST	NAME OF ROAD	(a) Equipment	(b) Way and Structures	(c) Clearing Wreck	(d) Total
	The AT & SF RY. CO-CL	$ 46,000.00	$ 900.00	$ 4,801.74	$ 51,701.74
	TOTAL	46,000.00	900.00	4,801.74	51,701.74

(26) Detail of cause, nature, and circumstances of accident; responsibility and experience of employees responsible; estimate

station (10) ..... milepost (11) ..... tion from station named (12) .51 Mi east

Kind of accident (13) Derailment — Clear, cloudy or foggy? (14) Clear — Raining or snowing? (15) No. — Daylight or dark? (16) Dark

Cause (briefly) (17) Excessive speed on curve, resulting in derailment two engines and four passanger cars.

Kind of train (18) Passenger — Train No. (18A) Over / flow / extra — Number of cars in train (18B) 13 — Engine Nos. (19) 3853 / 3704 — Direction (20) West — Speed (21) 35 to 40 m. p. h.

(22) Method of operation .....

(23) Number of main tracks .....

(Answers to questions 21 and 22 required only in connection with collisions.)

(24) DETAILS OF CASUALTIES TO PERSONS

Name and address of person	Class of person	Killed or nature and extent of injuries	Days disability. (If killed, so state) Actual (d)	Probable (e)
(See Attached List)				

(25) COST

NAME OF ROAD	(a) Equipment	(b) Way and Structures	(c) Clearing Wreck	(d) Total
The AT & SF RY. CO-CL	$ 46,000.00	$ 900.00	$ 4,801.74	$ 51,701.74
TOTAL	46,000.00	900.00	4,801.74	51,701.74

(26) Detail of cause, nature, and circumstances of accident; responsibility and experience of employees responsible; estimate and description of damage to railway property. (With regard to collisions involving any question of train orders, it should be stated whether a "19" order or a "31" order was used.)

Overflow Extra Passenger train, when running 35 to 40 miles per hour, derailed engines 3853 and 3704, combination car No. 2547 and tourist sleepers Nos. 4070, 4260 and 4267, due to excessive speed on 10 degree 4 minute curve, lead engine 3853, causing heavy stress on 90 pound rail, Santa Fe standard section, rolled by Colorado Fuel and Iron Company in 1912, relaid in curve No. 92 on Grand Canyon District 1928 - no defects. Accident due to negligence of Engineman B. H. Sparks. Experience 26 years as locomotive engineer and 8 years as

	Work train switching	1,596.00
	Total	$ 51,701.74

INSTRUCTIONS REGARDING ENTRIES ON FACE OF THIS SHEET

This report Must Be Rendered Monthly to the ARIZONA CORPORATION COMMISSION, Phoenix, Arizona. Accidents resulting in loss of life must be reported by telegraph, at the earliest possible moment.

1. The significant words in the name of the reporting carrier should be given in full, so far as practicable.

2 and 3. Concerning train accidents occuring on terminal or other track operated jointly or in common, or classifiable as crossing collisions, give full details as to rseponsibility.

4. Enter the number of the accident as recorded in the carrier's operating records.

5. Enter the name of the operating division on which the accident occurred.

6. State the day of the month.

7. State the time o'clock in hours and minutes, a.m. or p.m.

8. Enter a capital letter to indicate the class and a small letter to indicate the subclass.

10. Give the name of the station nearest to the place where the accident occurred (or was first discovered) and indicate whether it occurred on main track, or on yard track or sidings. This information should be given both for train accidents and train-service accidents. Main tracks within yards are not to be regarded as yard tracks. Sidings not used exclusively as passing tracks are to be regarded as yards.

11. The giving of the number of the milepost nearest to the place of the accident is optional; and instead of giving it in the case of either a train or a train-service accident, if the accident occurred at a station, that fact should be stated, or, if it occurred within a yard, the name or description of the yard should be given.

12. Distance, estimated in miles or rods, should be given when appropriate.

[illegible] Wrecker- Labor Supplies	1,810.00
Needles Wrecker-Labor Supplies	1,329.74
Work train switching	1,896.00
Total	$ 51,701.74

INSTRUCTIONS REGARDING ENTRIES ON FACE OF THIS SHEET

This report Must Be Rendered Monthly to the ARIZONA CORPORATION COMMISSION, Phoenix, Arizona. Accidents resulting in loss of life must be reported by telegraph, at the earliest possible moment.

1. The significant words in the name of the reporting carrier should be given in full, so far as practicable.

2 and 3. Concerning train accidents occuring on terminal or other track operated jointly or in common, or classifiable as crossing collisions, give full details as to rseponsibility.

4. Enter the number of the accident as recorded in the carrier's operating records.

5. Enter the name of the operating division on which the accident occurred.

6. State the day of the month.

7. State the time o'clock in hours and minutes, a.m. or p.m.

8. Enter a capital letter to indicate the class and a small letter to indicate the subclass.

10. Give the name of the station nearest to the place where the accident occurred (or was first discovered) and indicate whether it occurred on main track, or on yard track or sidings. This information should be given both for train accidents and train-service accidents. Main tracks within yards are not to be regarded as yard tracks. Sidings not used exclusively as passing tracks are to be regarded as yards.

11. The giving of the number of the milepost nearest to the place of the accident is optional; and instead of giving it in the case of either a train or a train-service accident, if the accident occurred at a station, that fact should be stated, or, if it occurred within a yard, the name or description of the yard should be given.

12. Distance, estimated in miles or rods, should be given when appropriate.

18. Show the kind of train, as freight, passenger, mixed, special, official, pay, work, switching, etc. If light engine, state to what class of service assigned.

20. Give the time-table direction.

21. Give the estimated speed in miles per hour.

22. In case of a collision, show whether trains were operated under a block system at point of accident, stating specifically what method of blocking, if any, was employed.

23. Give number of main tracks in use in locality of accident.

25. State the amount of damage to equipment (including damage to foreign cars), to other railway property, and cost of clearing wreck, with the total amount as provided. In case of a "joint-operation" accident, figures for the several items should be given for each road involved, the name of which should be clearly indicated. If no other road is involved, respondent may make the requisite entries on "Total" line only.

26. If the space afforded on this form is insufficient for all the requisite entries concerning a particular accident, blank sheets of like size, suitably identified and completed, may be attached to a single Form 195 containing the introductory details applicable to the accident as a whole.

Plaintiff's Exhibit No. 350

PRELIMINARY REVISED POPULATION ESTIMATES FOR CONTINENTAL UNITED STATES, TERRITORIES AND POSSESSIONS, STATES, AND CITIES OF 100,000 OR MORE: 1930-1939

Preliminary estimates of the population of continental United States, its territories and possessions, States, and cities of 100,000 or more for the years 1930 to 1939 were announced today by Acting Director Vergil D. Reed of the Bureau of the Census, Department of Commerce. Some of these estimates represent revisions of estimates made before the taking of the 1940 Census. Final revised estimates cannot be computed until additional intercensal data are available, but the figures for continental United States and the Territories and possessions will probably be changed only very slightly.

In Table 1 is given the estimated population of continental United States for January 1 and July 1 of each year during the last intercensal period. The population increase in each six-month period and the distribution of that increase between natural increase and net migration from abroad are also presented, in addition to the annual increase. Starting with the census population of April 1, 1930, births and immigrants were added, and deaths and emigrants were subtracted, to produce successive estimates. Allowances were made for underregistration of births and deaths, and a final very slight adjustment was made to produce the exact 1940 census figure. Only the provisional character of the data on births and deaths for the first three months of 1940 prevents the estimates from being final.

The estimated population of States and of cities having 100,000 inhabitants or more at the Census of 1930 are presented for July 1 of each year from 1930 to 1939, in Tables 2 and 4. The basic method used was linear interpolation between two census figures, that is, it was assumed that the amount of increase or decrease for a given area was the same for each intercensal year. Six States and twenty cities were covered by local censuses for one or more years between the Federal censuses. (These States and cities are noted on the tables.) These local census figures were used as additional base points for linear interpolations. The difference between the sum of all the State estimates for any given year and the United States estimate described above was prorated among those States not having a special census. The adjustment factor never exceeded 0.3 percent for any year. After the tabulation of 1940 census data on each person's place of residence on April 1, 1935, and the compilation of school statistics and other local series associated with population, final annual estimates that reflect the ebb and flow of population growth during the decade will be prepared.

The population of the Hawaiian Islands for July 1 of each year 1930 to 1939 was estimated on the basis of births, deaths, and migration, just as the population of continental United States was estimated. Estimates for the other Territories and possessions, which have less reliable vital statistics, were obtained by linear interpolation. (See Table 4.) The Census of Puerto Rico taken in 1935 by the Puerto Rico Reconstruction Administration was used in the same manner as were the State censuses.

The estimates are presented as computed, to the last digit (instead of being rounded), not because they are assumed to be accurate to the last unit, but for convenience in summation.
